

## HP ChemAccess Accelerated Implementation Service (AIMS)

### Maximize Utilization of Your Analytical System Solution

The HP ChemAccess Accelerated Implementation Service (AIMS) provides a solution-oriented approach that helps you implement structured HP ChemAccess Client/Server systems efficiently and effectively.

An experienced HP Consultant will work with you to tailor an implementation to address your specific laboratory, data handling and networking needs. Whether you have one system or many, your HP Consultant can provide expert assistance during the HP ChemAccess implementation process.

### HP's ChemAccess AIMS Benefits

#### Accelerated Integration of ChemAccess into Your Laboratory!

Timely implementation using HP ChemAccess AIMS helps you meet your business goals quickly. Experienced HP Consultants will use a proven process to reduce the risk of implementation delays and budget overruns.

AIMS pairs an HP Consultant with your project team to rapidly develop a successful HP ChemAccess Client/Server system implementation. Your project team has in-depth knowledge

of your laboratory, staff and needs. The HP Consultant is a specialist who understands systems, networks, HP laboratory solutions as well as project management. Together, the team will accelerate the integration of HP ChemAccess into your laboratory operations.

#### Flexible, Tailored Implementation!

Since no two laboratories are alike, AIMS helps you configure the HP ChemAccess Client/Server system to meet your requirements and fulfill your business goals.

Your HP sales representative and the Consultant will work with you to tailor an implementation that best meets your project schedule, resources and scope. This can include tasks you perform yourself in combination with tasks performed by the HP Consultant.

#### Maximize Your Productivity

During the implementation, the HP Consultant will assist you in making the best use of standard application functionality, customized methods, and computer capabilities. Following implementation, onsite training is provided to your staff to extend their capabilities. They will be trained on the operations of your new system, as well as the customization options within the application software so they can enhance the system in the future. Additional training may be required for new ChemAccess and ChemStation users. The HP Consultant will help you determine the necessary training. The training is available through Hewlett-Packard's Education Center and can be offered on-site at an additional charge.
