GENERAL

Every effort has been made to ensure accuracy, however in some cases changes in the products or availability could occur which may not be reflected in this document. Christie reserves the right to make changes to specifications at any time without notice. Performance specifications are typical, but may vary depending on conditions beyond Christie's control such as maintenance of the product in proper working conditions. Performance specifications are based on information available at the time of printing. Christie makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of fitness for a particular purpose. Christie will not be liable for errors contained herein or for incidental or consequential damages in connection with the performance or use of this material. Canadian manufacturing facility is ISO 9001 and 14001 certified.

For the most current technical documentation and office contact information, visit www.christiedigital.com.

WARRANTY

Products are warranted under Christie's standard limited warranty, the complete details of which are available at <https://www.christiedigital.com/help-center/warranties/> or by contacting your Christie dealer or Christie.

PREVENTATIVE MAINTENANCE

Preventative maintenance is an important part of the continued and proper operation of your product. Failure to perform maintenance as required, and in accordance with the maintenance schedule specified by Christie, will void the warranty.

REGULATORY

The product has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the product is operated in a commercial environment. The product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of the product in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at the user's own expense. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

CAN ICES-003 (A) / NMB-003 (A)

이 기기는 업무용 (A 급) 으로 전자파적합등록을 한 기기이오니 판매자 또는 사용자는 이점을 주의하시기 바라며, 가정 외의 지역에서 사용하는 것을 목적으로 합니다.

ENVIRONMENTAL

The product is designed and manufactured with high-quality materials and components that can be recycled and reused. This symbol  means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from regular waste. Please dispose of the product appropriately and according to local regulations. In the European Union, there are separate collection systems for used electrical and electronic products. Please help us to conserve the environment we live in!

Introduction

This manual is intended for Christie-qualified installers and trained operators of the GS Series 2K projector—DWU880-GS, DWU880A-GS, DWU9200-GS, DWU1100-GS, and DWU1100A-GS.

For complete GS Series 2K product documentation and technical support, go to www.christiedigital.com.

This projector is intended for use in a non-cinema environment.

Safety and warning guidelines

This projector must be operated in an environment that meets the operating range specification. Use only the attachments and/or accessories recommended by Christie. Use of others may result in the risk of fire, shock, or personal injury.

Warning! If not avoided, the following could result in death or serious injury.

- Do not expose the product to moisture.
- Do not operate the product without all of its covers in place.
- This product must be installed within a restricted access location not accessible by the general public.
- Only personnel who are trained on the precautions for the restricted access location can be granted entry to the area.
- FIRE HAZARD! Keep hands, clothes, and all combustible material away from the concentrated light beam of the projector.
- TRIP OR FIRE HAZARD! Position all cables where they cannot contact hot surfaces, be pulled, be tripped over, or damaged by persons walking on or objects rolling over the cables.
- SHOCK HAZARD! Disconnect the product from AC before installing, moving, servicing, cleaning, removing components, or opening any enclosure.
- OPTICAL RADIATION HAZARD! Disconnect the power plug from the AC outlet if the product is not being used for an extended period of time.
- Do not allow anything to rest on the power cord.
- Always provide proper ventilation for the product to prevent overheating.

Caution! If not avoided, the following could result in minor or moderate injury.

- Only Christie-qualified technicians are permitted to open product enclosures.
- All procedures must be performed by Christie-qualified technicians.

Notice. If not avoided, the following may result in equipment or property damage.

- Always use a lens plug when installing or moving the product. This prevents contaminants from entering the product.
- Only use cleaning solutions recommended by Christie. All other cleaning solutions may cause product damage and void the warranty.

AC/power precautions

Read all safety and warning guidelines before powering on the projector.

Warning! If not avoided, the following could result in death or serious injury.

- FIRE HAZARD! Do not use a power cord, harness, or cable that appears damaged.
- FIRE OR SHOCK HAZARD! Do not overload power outlets and extension cords.
- SHOCK HAZARD! Only use the AC power cord provided with the product or recommended by Christie.
- FIRE AND SHOCK HAZARD! Do not attempt operation unless the power cord, power socket, and power plug meet the appropriate local rating standards.
- SHOCK HAZARD! Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.
- SHOCK HAZARD! The AC power cord must be inserted into an outlet with grounding.
- SHOCK HAZARD! Disconnect the product from AC before installing, moving, servicing, cleaning, removing components, or opening any enclosure.
- Install the product near an easily accessible AC receptacle.

Installation safety and warning guidelines

Read all safety and warning guidelines before installing the projector.

Warning! If not avoided, the following could result in death or serious injury.

- High leakage current present when connected to IT power systems.

Caution! If not avoided, the following could result in minor or moderate injury.

- ELECTRICAL and BURN HAZARD! Use caution when accessing internal components.
- Only Christie-qualified technicians are authorized to use the tools provided in the toolbox.

Laser safety precautions

This projector has been classified as Class 1 Laser Product - Risk Group 2 according to IEC 60825-1:2014 and IEC 62471-5:2015 standard. Read all safety and warning guidelines before installing or operating the projector.

Warning! If not avoided, the following could result in death or serious injury.

- **LASER RADIATION HAZARD!** This projector has a built-in Class 4 laser module. Never attempt to disassemble or modify the laser module.
- Any operation or adjustment not specifically instructed in the User manual creates the risk of hazardous laser radiation exposure.
- Do not operate the product without all of its covers in place.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.
- Only Christie-qualified technicians who are knowledgeable about the hazards associated with laser use, high-voltage, and high temperatures generated by the product are authorized to assemble, install, and service the Christie Laser Projection System.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage. Class 1 laser product of IEC/EN 60825-1:2014 and Risk Group 2 according to IEC 62471-5:2015.
- Additional instructions to supervise children, no staring, and not use optical aids.
- Additional instructions to install above the reach of children.
- Notice is given to supervise children and to never allow them to stare into the projector beam at any distance from the projector.
- Notice is given to use caution when using the remote control for starting the projector while in front of the projection lens.
- Notice is given to the user to avoid the use of optical aids such as binoculars or telescopes inside the beam.
- As with any bright light source, do not stare into the beam, RG2 IEC 62471-5:2015.
- **MOUNT ABOVE THE HEADS OF CHILDREN.** The use of a ceiling mount is recommended with this product to place it above the eyes of children.
- Complies with 21 CFR 1040.10 and 1040.11 except for conformance as a Risk Group 2 LIP as defined in IEC 62471-5:Ed. 1.0. For more information see Laser Notice No. 57, dated May 8, 2019. IEC 60825-1:2014: CLASS 1 LASER PRODUCT - RISK GROUP 2.

Product labels

Learn about the labels that may be used on the product. Labels on your product may be yellow or black and white.

General hazards

Hazard warnings also apply to accessories once they are installed in a Christie product that is connected to power.

Fire and Shock Hazard

To prevent fire or shock hazards, do not expose this product to rain or moisture.
Do not alter the power plug, overload the power outlet, or use it with extension Cords.
Do not remove the product enclosure.
Only Christie-qualified technicians are authorized to service the product.

Electrical Hazard

Risk of electric shock.
Do not remove the product enclosure.
Only Christie-qualified technicians are authorized to service the product.

General hazard.

Electric shock hazard. To avoid personal injury, disconnect all power sources before performing maintenance or service.

Electrocution hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Fire hazard. To avoid personal injury and property damage, follow the instructions provided in this document.

Hot surface hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Burn hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Moving parts hazard. To avoid personal injury, keep hands clear and loose clothing tied back.

Fan hazard. To avoid personal injury, keep hands clear and loose clothing tied back. Always disconnect all power sources before performing maintenance or service procedures.

Voltage hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Not for household use.

Mandatory action

Consult the service manual.

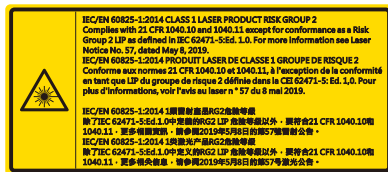

Disconnect all power sources before performing maintenance or service procedures.

Electrical labels

Indicates the presence of an earth ground.

Laser labels

This projector has been classified as Class 1 Laser Product-Risk Group 2 according to the IEC 60825-1:2014 and IEC 62471-5:2015 standard.

Indicates a light hazard. Do not look directly into the lens. The extreme high brightness can cause permanent eye damage. Class 1 Laser Product-Risk Group 2 according to Class 1 IEC 60825-1:2014 and IEC 62471-5:2015.

Do not look into the projector lens when the laser is on. The bright light may result in permanent eye damage.

Mount above the heads of children. When within 1 m of the product, avoid eye exposure to avoid temporary or permanent eye damage.

Projector overview

The GS Series 2K is a high brightness, high-resolution video graphics one-chip laser-based projector. The projector is available in WUXGA resolution and uses Digital Light Processing (DLP™) technology from Texas Instruments. It is primarily designed for fixed installation and secondary applications including rental-staging and LBE (Location Based Entertainment). This product is used for professional applications and is not for domestic use.

Contact your dealer

Record the information about your projector and keep this information with your records to assist with the servicing of your projector. If you encounter a problem with your Christie projector, contact your dealer.

Key features

- WUXGA 0.67" 1920 x 1200 resolution
- Projection lens compatibility:
 - Horizontal offset ranges with half image size: +/-30%
 - Vertical offset ranges with half image size: +/-100%

Measurements comply with industry standards where offset is calculated as a ratio of the number of pixels shifted up or down to half image size.

- Operation at all orientations (a full 360 degrees in any axis)
- Full HD 3D technology with frame sequential up to 120Hz
- Support 2D high frame rate 1080P@120Hz
- Embedded warping, curve blending

- Christie Twist™ and Mystique™ allows for easy and quick blending and warping
- A wide range of connectivity including HDMI, HDBaseT, and 3G-SDI inputs
- Integrated HDBaseT solution support HD video streaming through RJ45
- SNMP traps and email notifications
- 10-bit image processor electronics with modular design
- All video formats can be resized to full screen either horizontally or vertically while maintaining aspect ratio
- The projector can be operated using any of the following:
 - The built-in keypad, the infrared (IR) remote keypad, a wired remote keypad, a PC/device using serial communications (Ethernet or RS232)
 - A web page using Ethernet or from a PC

How the projector works

The GS Series 2K projectors accept a variety of input signals for a wide range of commercial projection applications.

Designed with solid-state illumination light sources and phosphor technology, the red, green and blue color elements are segmented through a phosphor wheel and modulated by one Digital Micromirror Device (DMD) panel responding to incoming data streams of digitized red, green, and blue color information. As these digital streams flow from the source, light from the responding on pixels of the DMD panel is reflected, converged, and projected to the screen through projection lenses, where all pixel reflections are superimposed in sharp full-color images.

List of components

This projector comes with all the items listed below. Check to make sure your package is complete. If anything is missing, contact your dealer.

- AC power cord
- IR remote keypad
- Product Safety Guide

Product documentation

For installation, setup, and user information, see the product documentation available on the Christie Digital Systems USA Inc. website at www.christiedigital.com. Read all instructions before using or servicing this product.

1. Access the documentation from the Christie website:
 - Go to this URL: <https://bit.ly/37SaOcN> or <https://www.christiedigital.com/products/projectors/all-projectors/gs-series/>

- Scan the QR code using a QR code reader app on a smartphone or tablet.

2. On the product page, select the model and switch to the **Downloads** tab.

Installation and setup

Learn how to install, connect, and optimize the projector display.

Site requirements

To safely install and operate the projector, the installation location must have restricted access for authorized personnel only and meet these minimum requirements.

Physical operating environment

Provides specifications for the operating environment.

Item	Specification
Ambient temperature (operating)	0 to 40°C (32 to 104°F) for 0 to 762 meters (0 to 2500 feet)
	0 to 35°C (32 to 95°F) for 762 to 1524 meters (2500 to 5000 feet)
	0 to 30°C (32 to 86°F) for 1524 to 3048 meters (5000 to 10,000 feet)
Storage temperature range	-10 to 60°C (14 to 140°F)
Humidity range	10% to 85% RH (maximum), non condensing
Storage humidity range	5% to 90% RH (maximum), non condensing
Operating altitude	3048 meters (10,000 feet) maximum

Power connection

The projector uses an AC power system allowing the projector to operate at full brightness with a power supply of 100 to 240 VAC. Operating the device outside of the voltage range may cause unsatisfactory operation or damage to the projector. To ensure safety operation, only use the AC power cord provided with the product or recommended by Christie.

Model name	Power requirements
DWU880-GS / DWU880A-GS	• 100 - 120 VAC, 50/60 Hz, 6.5 A • 220 - 240 VAC, 50/60 Hz, 3.0 A
DWU1100-GS / DWU1100A-GS	• 100 - 120 VAC, 50/60 Hz, 9.0 A • 220 - 240 VAC, 50/60 Hz, 4.0 A

Projector components

Identify the main components of the projector.

Front view

Identify the main components on the front of the projector.

ID	Part name	Description
1	Front IR sensor	Receives signals from the IR remote keypad. Keep the signal path to the sensor unobstructed for uninterrupted communication with the projector.
2	Projection lens	Allows automated lens control and adjustment: vertical and horizontal offsets, zoom, and focus.
3	Adjustable feet	Raises or lowers the feet to level the projector.

Rear view

Identify the main components on the rear of the projector.

ID	Part name	Description
1	Rear IR sensor	Receives signals from the IR remote keypad. Keep the signal path unobstructed for uninterrupted communication with the projector.
2	Input/Output (I/O) panel	Connects the projector to external devices.
3	Built-in keypad	Controls the projector.
4	AC input	Connects to the supplied power adapter.

ID	Part name	Description
5	Power button	Powers the projector on or off.
6	Kensington Security Slot	Secures the projector to help prevent theft or unauthorized removal.

Left view

Identify the main components on the left side of the projector.

ID	Part name	Description
1	Cooling air vents (intake)	Provides cooling to the projector. Keep these vents unobstructed to prevent the projector from overheating.

Right view

Identify the main component on the right side of the projector.

ID	Part name	Description
1	Cooling air vents (exhaust)	Provides cooling to the projector. Keep these vents unobstructed to prevent the projector from overheating.

Built-in keypad

The built-in keypad controls the projector.

ID	Button	Description
1	Auto	Automatically optimizes an image.
2	Power	Turns the projector on or off.
3	Shutter	Displays or blanks the video image.
4	OSD	Hides or shows the on-screen display (OSD) menus.
5	Help	Displays the instructions for source connection. (Not supported)
6	Menu	Displays the menus.
7	Arrow Keys	Adjusts a setting up or down, or navigate within a menu.
8	Input	Selects an input for the main or picture in picture/picture by picture (PIP/PBP) image.
9	Focus	Adjusts the focus.
10	Lens	Adjusts the lens vertical or horizontal offset setting.
11	Zoom	Adjusts the zoom. - Press the up arrow key to zoom in. - Press the down arrow key to zoom out.
12	Back	Returns to the previous level or exits the menus if at top level.

Input/output (I/O) panel

Identify the components of the Input/Output (I/O) panel.

ID	Connector name	ID	Connector name
1	DC 12V	8	RS232
2	HDBaseT	9	3D SYNC IN
3	HDMI OUT	10	3D SYNC OUT
4	HDMI-2 IN	11	USB
5	HDMI-1 IN	12	ETHERNET
6	DVI-D	13	REMOTE IN
7	3G-SDI IN		

IR remote keypad

The IR remote keypad communicates with the projector by way of wireless communications.

If you choose to use a cable, not supplied, it must be 20 m or less. If the length of cable exceeds 20 m, the IR remote keypad may not work correctly.

ID	Button	Description
1	SHUTTER	Displays or blanks the video image.
2	ON	Turns the projector on.
3	GAMMA	Adjusts the mid-range levels.
4	BRIGHT	Adjusts the amount of light in the image.

ID	Button	Description
5	PIP PBP	Turns picture-in-picture/picture-by-picture (PIP/PBP) on or off.
6	SIZE	Adjusts the PIP/PBP size.
7	Number Keys	Enter a number, such as a channel, value, and so on. The on-screen display (OSD) indicates if a function is not supported.
8	HELP	Displays the instructions for source connection.
9	MENU	Displays the menus.
10	Arrow Keys	Adjusts a setting up or down to navigate within a menu.
11	TEST	Displays a test pattern.
12	AUTO	Automatically optimizes an image.
13	OSD	Hides or shows OSD menus.
14	KEYSTONE H	Adjusts the horizontal keystone.
15	KEYSTONE V	Adjusts the vertical keystone.
16	STANDBY	Turns the projector off.
17	CONTR	Adjusts the difference between dark and light.
18	HOT KEY	Selects your preset key quickly.
19	SWAP	Swaps the main and PIP/PBP images.
20	LAYOUT	Adjusts the PIP/PBP layout.
21	FOCUS	Adjusts the focus to improve image clarity as required.
22	ZOOM	Adjusts the zoom to achieve a required image size.
23	PROJ	Changes the IR remote keypad ID. • To assign an ID, press PROJ + <1 to 9>. • To return to the universal IR remote ID, press PROJ + 0.
24	EXIT	Returns to the previous level or exits menus if at the top level.
25	ENTER	Selects a highlighted menu item, or changes or accepts a value.
26	INPUT	Selects an input for the main or PIP/PBP image.
27	INFO	Displays the projector information.
28	LENS H	Adjusts the position of the image horizontally.
29	LENS V	Adjusts the position of the image vertically.

Positioning the display

When you select a position for the projector, consider the size and shape of your screen, the location of your power outlets, and the distance between the projector and the rest of your equipment. Follow these general guidelines:

- Position the projector on a flat surface at a right angle to the screen. The projector (with the standard lens) must be at least 5.2 ft (1.6 m) from the projection screen.
- Position the projector to the required distance from the screen. The distance from the lens of the projector to the screen, the zoom setting, and the video format determine the size of the projected image.
- Determine the lens throw ratio.

For more information detailing the throw ratio for each lens, refer to the *GS Series 2K projector—Lens Throw Ratios Technical Reference (P/N: 020-103353-XX)*.

- 360 degree free orientation operation

When installing the projector in portrait orientation, Christie recommends that the built in keypad and power inputs face upwards. This allows access to the built in keypad and power connections during operation.

Turning on the projector

The projector cables must be securely connected before turning the power on.

Warning! Failure to comply with the following could result in death or serious injury.

- Do not look into the projector lens when the laser is on. The bright light may result in permanent eye damage.
- Installing or replacing a lens must be done by a Christie-qualified service technician to avoid exposure to dangerous emission levels.

1. Plug the projector in to AC power.

The Power button on the built in keypad is illuminated when the power cables are connected.

2. Ensure the lens has been installed in the projector by a Christie-qualified service technician.
3. Ensure that no one or no objects are in the beam path before turning on the projector.
4. To turn on the projector, on the IR remote keypad on the built-in keypad press .

The status LED is green with a long blink.

5. To select an input source and turn it on, on the IR remote keypad select **INPUT**.

Available input sources are VGA, HDMI1, HDMI2, DVI, 3G-SDI, 3D sync, and HDBaseT.

The projector detects the source you selected and displays the image.

6. If using the projector for the first time, select a preferred language from the Main Menu after the startup screen is displayed.

Turning off the projector

Power off the projector in preparation for inspection or maintenance.

1. To turn the projector off, on the IR remote keypad or built-in keypad press .

A warning message appears on the displayed image.

2. To confirm your selection, press  again.

If you do not press  again, the warning message disappears after three seconds and the projector remains on.

LED status indicator

LED status indicator helps identify the projector state. LEDs are defined below.

Status LED

Identify the LED state colors and meaning.

LED status	Projector state
Off	AC power is off (without AC plugged in).
Green (flashing)	Projector is starting up.
Green (solid)	System is operating normally.
Blue (flashing)	Projector is cooling down.
Blue (solid)	Projector is in standby mode.
Yellow (flashing)	A problem exists with the projector that does not cause it to shut down. Examples of warnings include: filter needs changing, one of the pumps is damaged, or a fan is operating at full speed due to over temperature of laser diode (LD) driver.
Yellow (solid)	The end user is turning off the projector while it is in a warning state.
Red (flashing)	An error with the projector exists causing it to shut down. Examples of errors include: fan failure, over temperature, wrongly installed filter, or color wheel (CW) failure.
Red (solid)	The user is turning off the projector while it is in an error state.
White (flashing)	Projector is in Firmware Upgrade Mode.

Shutter LED

Identify the shutter LED state colors and meaning.

LED Status	Projector State
Off	Projector is on and an image is displayed. Shutter is open.
Magenta (solid)	Projector is on and the image is blank. Shutter is closed.

Adjusting the size and position

Adjust the projector's size and position. Christie recommends warming the lens before completing these procedures as focus may change as the lens warms.

Setting the image size preset

Set the image size preset to display the image in its native resolution or to resize by maximizing the height, width, both height and width, or to the maximum size while keeping the original aspect ratio.

1. Select **Menu > Size & Position > Size Presets**.
2. Select the appropriate size preset:
 - **Auto**—Displays with the detected size.
 - **Native**—Displays in its native resolution.
 - **4:3**—Retains 4:3 aspect ratio.
 - **Letterbox**—Makes the active content enlarge to the full screen.
 - **Full Size**—Fills the screen, regardless of the source.
 - **Full Width**—Fills display width and keep aspect ratio.
 - **Full Height**—Fills display height and keep aspect ratio.
 - **Custom**—Stretches the display horizontally and vertically without cutting the image display.
 - **3D Mode**—Displays 3D content. All other items are grayed out, if 3D Mode is selected.
3. To confirm the selection, press **ENTER**.

Setting the digital size of display image

These functions are similar technologies as in-camera image processing. Use Digital Horz Zoom or Digital Vert Zoom to enlarge or to compress the display image horizontally or vertically.

1. Select **Menu > Size & Position > Digital Horz Zoom** or **Digital Vert Zoom**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Setting the digital position of display image

Change the position of the projector's display image horizontally or vertically.

Digital Horz Shift is only available after adjusting the Digital Horz Zoom, and Digital Vert Shift is only available after adjusting the Digital Vert Zoom.

1. Select **Menu > Size & Position > Digital Horz Shift** or **Digital Vert Shift**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Geometry correction

Modify the geometry of the display image directly on the projector.

Connecting to Christie Twist and Mystique grays out the geometry correction settings on the projector. Uploading warp and blend from Twist and Mystique overwrites the currently applied geometry correction settings. See [Configuring warp and blend](#) on page 33 for more details.

Saving geometry correction

Save the warp and blend settings to the projector memory. The blend memory saves the edge blend settings, while the warp memory saves the settings of Keystone, Pincushion, 4-Corner, Manual Warp Filter, and image warp.

1. Select **Menu > Size & Position > Geometry Correction > Warp Memory > Save Warp** or **Blend Memory > Save Blend**.
2. To save the geometry setting, select a record.
One projector can save up to four warps and four blends.
3. To confirm the selection, press **ENTER**.

Applying geometry correction

Apply the previously saved geometry setting to the projector.

1. Before applying the previous geometry setting, save the geometry setting to the projector.
See [Saving geometry correction](#) on page 28 for further information.
2. Select **Menu > Size & Position > Geometry Correction > Warp Memory > Apply Warp** or **Blend Memory > Apply Blend**.
3. To apply the specific geometry setting, select the required record.
4. To confirm the selection, press **ENTER**.
5. To erase the applied geometry setting, select **Off**.

Enabling basic image blending

Configure blends directly on the projector to increase or decrease the borders of an individual image, so it blends with a neighboring image to create a single, seamless image.

You can set blends on a projector when not using Christie Twist and Mystique. Connecting to Twist and Mystique grays out the blend settings on the projector. Applying blends from Twist and Mystique overwrites the blends directly set on the projectors.

1. Select **Menu > Size & Position > Geometry Correction > Blend Area**.
2. Choose a side to blend in with the other projectors.
3. To set up the starting position, select **Start Pixel**.
4. Adjust the slider by arrow keys or press **ENTER** to input the starting position.
5. After inputting the starting position, press **ENTER**.
6. To set up the size of blend area, select **Pixel Height**.
7. Adjust the slider by arrow keys or press **ENTER** to input the width of blend area.
8. After inputting the size of blend area, press **ENTER**.
9. To set the gamma value of the blend area, select **Blend Gamma**.
10. After selecting a gamma value, press **ENTER**.
11. To apply the settings, select **Enable**.
12. Press **ENTER**.
13. To save the blend setting, select **Menu > Size & Position > Geometry Correction > Blend Memory > Save Blend**.
14. To set up the other side of blend area, repeat step 2 to 13.

Blending multiple images

Use Christie Twist to manually configure edge blends and apply them to the projectors.

Christie Twist Premium and Twist Pro offer advanced blending options. Refer to the Christie website (www.christiedigital.com) for product information and documentation.

1. Connect the projector and computer to the same network and subnet.
2. To add a projector to a computer, from the Twist menu, click **Home > Add**.
 - To manually connect the projector with Twist, use port 3003.
 - Connecting to Twist grays out the Geometry Correction settings on the projector.

3. Select a record number to save the blend setting.

You can save up to four blend settings.

4. In Twist, configure edge blend settings.

Use the test patterns in Twist to assist in adjusting the blend area.

For more information about creating blend files in Twist, refer to *Twist User Guide (P/N: 020-101380-XX)*.

5. To send the blend settings to the projector, on the canvas, right-click a projector window and select **Send Blend**.

6. Repeat step 2 to 5 for the remaining projectors.

For multiple projectors, use Twist to identify the projectors.

7. To save the warp file on the projector, click **File > Save** or **Save As**.

When removing the projector from Twist, or closing the program, the projector automatically saves the currently applied blend settings to its blend memory.

8. To change the name when saving blends on the projector, or update the memory location of the blend, click **Properties**.

The changed name shows on both Twist and the projector.

Downloading a blend from the projector memory

Use Twist to download the blend file saved on the projector memory.

1. Before downloading the previous blend file, save the blend setting to the projector memory.
2. On the canvas, click a projector window.
3. Click **File > Blend/Mask/B.U.**
4. In the **Download Blend** dialog, select the required record.
5. To download the selected blend setting, click **OK**.
6. To apply the blend setting to the projector, on the canvas, right-click a projector window and select **Send Blend**.

Adjusting horizontal keystone

Use horizontal keystone to correct a keystone image shape in which the left and right borders of the image are unequal in length, and the top and bottom are slanted to one of the sides.

1. Select **Menu > Size & Position > Geometry Correction > Keystone > Horz Keystone**.
2. To adjust the horizontal keystone, adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Adjusting the vertical keystone

Use vertical keystone to correct a keystone image shape in which the top and bottom borders of the image are unequal in length, and both sides of the image are inclined toward the top or bottom edge.

1. Select **Menu > Size & Position > Geometry Correction > Keystone > Vert Keystone**.
2. To adjust the vertical keystone, adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Adjusting horizontal pincushion

Use horizontal pincushion to correct a pinched image shape in which the horizontal straight lines are curved inwards or horizontal straight lines are curved outwards from the center.

1. Select **Menu > Size & Position > Geometry Correction > Pincushion > Horz Pincushion**.
2. To adjust the horizontal pincushion, adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Adjusting vertical pincushion

Use vertical pincushion to correct a pinched image shape in which the vertical straight lines are curved inwards or vertical straight lines are curved outwards from the center.

1. Select **Menu > Size & Position > Geometry Correction > Pincushion > Vert Pincushion**.
2. To adjust the vertical pincushion, adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Adjusting 4-corner

Use 4-corner to correct the four corners of the projector's display image.

1. Select **Menu > Size & Position > Geometry Correction > 4-Corner**.
2. Select the corner and the direction to adjust.
3. To move the corner, adjust the slider by arrow keys or press **ENTER** to input the value.
4. After inputting the value, press **ENTER** to apply.
5. To adjust the other corner or direction, repeat step 2 to 4.

Enabling auto warp filter

Improve the sharpness of the image and reduce the ghosting automatically after geometry correction, such as keystone, pincushion, 4-corner, and warping.

1. Select **Menu > Size & Position > Geometry Correction > Auto Warp Filter**.
2. To enable the setting, press **ENTER**.

Adjusting warp filter

Improve the sharpness of the image after geometry correction, such as keystone, pincushion, 4-corner, and warping. Adjust the warp filter manually to reduce the ghosting.

1. Select **Menu > Size & Position > Geometry Correction > Manual Warp Filter**.
2. To reduce the ghosting in different direction, select **Horz Filter** or **Vert Filter**.
3. Adjust the slider by arrow keys or press **ENTER** to input the value.
4. After inputting the value, press **ENTER** to apply.

Resetting geometry correction setting

Reset all geometry correction parameters back to default, including warp and blend settings.

1. Select **Menu > Size & Position > Geometry Correction > Reset to Default**.
2. Press **ENTER**.

Configuring warp and blend

By blending multiple images, you can combine several projectors to create a larger and seamless image. When the projection screen is not perfectly flat or rotated at an angle, warp the image to fit on the irregular surface.

Warping an image

Christie Twist offer various manual warping options to adjust the image shape with minimal performance impact. Refer to the Christie website (www.christiedigital.com) for product information and documentation.

1. Connect the projector and computer to the same network and subnet.
2. To add a projector to a computer, from the Twist menu, click **Home > Add**.
 - To manually connect the projector with Twist, use port 3003.
 - Connecting to Twist grays out the Geometry Correction settings on the projector.

3. Select a record number to save the warp.

You can save up to four warp settings.

4. In Twist, configure warp settings.

Use the test patterns in Twist to help with image shaping.

For more information about creating warp files in Twist, refer to *Twist User Guide (P/N: 020-101380-XX)*.

5. To send the warp settings to the projector, on the canvas, right-click a projector window and select **Send Warp**.
6. To save the warp settings on the projector, click **File > Save** or **Save As**.

When removing the projector from Twist, or closing the program, the projector automatically saves the currently applied warp settings to its warp memory.

7. To change the name when saving warps on the projector, or update the memory location of the warp, click **Properties**.

The changed name shows on both Twist and the projector.

Christie Twist can be upgraded to Twist Premium and Twist Pro that provides more advanced warping features. Refer to the Christie website (www.christiedigital.com) for product information and documentation.

Downloading a warp from the projector memory

Use Twist to download the warp file saved on the projector memory.

1. Before downloading the previous warp file, save the warp setting to the projector memory.
2. On the canvas, click a projector window.
3. Click **File > Warp**.
4. In the Download from Memory Location list, select the required record.
5. To download the selected warp setting, click **OK**.
6. To apply the warp setting to the projector, on the canvas, right-click a projector window and select **Send Warp**.

Performing auto warp and blend

Use Mystique (sold separately) to perform automatic warp, blend, and more advanced geometry settings. Mystique is an automated camera-based alignment and recalibration solution that lets you quickly stage, install, align, calibrate, and maintain multi-projection systems.

Refer to the Christie website (www.christiedigital.com) for product information and documentation.

Adjusting the image settings

Learn how to adjust the projector image.

Adjusting the brightness

Adjust the intensity of the image.

1. Select **Menu > Image Settings > Brightness**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Adjusting the contrast

Adjust the degree of difference between the lightest and darkest parts of the image and changes the amount of black and white in the image.

1. Select **Menu > Image Settings > Contrast**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Adjusting the color space

Determine how the color components are decoded for accurate color in the display.

1. Select **Menu > Image Settings > Color Space**.
2. If projector does not detect the correct input signal while **Auto** is enabled, disable **Auto** by pressing **ENTER** to select color space manually.
3. To match up with the input signal, select appropriate color space:
 - Auto
 - RGB

- RGB Full
 - RGB Limited
 - YUV
 - REC709
 - REC601
4. To confirm the selection, press **ENTER**.

Adjusting the image sharpness

Adjust the edge clarity of the image.

1. Select **Menu > Image Settings > Detail**.
2. Select the sharpness:
 - Maximum
 - High
 - Normal
 - Low
 - Minimum
3. To confirm the selection, press **ENTER**.

Setting up 3D display

Use the functions in 3D Display menu to make the timing adjustment and environment necessary for displaying 3D images.

Setting 3D format

Set up the 3D format according to the 3D input signal.

1. Select **Menu > Image Settings > 3D Display > 3D Enable**.
2. Select the appropriate 3D format:
 - Auto
 - Frame Packing
 - Side by Side
 - Top and Bottom
 - Frame Sequential
 - Off
3. To confirm the selection, press **ENTER**.

Inverting 3D signal

3D images consist of a series of images (frames) that alternate quickly between two slightly different view points, corresponding to our left and right eyes. When these frames are displayed fast enough and viewed with 3D glasses synchronized to the left/right (L/R) changes, the resulting image appears with the same depth and perspective that is sensed in the real world.

If the projector generates the sync internally and content is displayed without 3D sync in the cable connected to the projector, the content has a 50% chance of being displayed with the left/right eyes swapped. This function is used for swapping the sequence of the image to make the resulting image appear normally.

1. Select **Menu > Image Settings > 3D Display > 3D Invert**.
2. To swap, press **ENTER**.

Selecting the 3D sync input signal

This function is used for selecting the 3D sync input option.

1. Select **Menu > Image Settings > 3D Display > 3D Sync In Select**.
2. Select the appropriate 3D sync in setting.
 - **Auto**—If an external 3D sync input is detected, the projector uses automatically the external sync input. If no external sync input is detected, the projector uses the internal 3D sync to display the content.

For multi-threaded applications, if the 3D enable function is set to Frame Sequential, Christie recommends to connect the source device to the projector via 3D Sync In port. The Frame Delay function will ensure a synchronized display for multiple projectors.

- **Internal**—The projector generates the 3D sync internally and content is displayed.
 - **External**—The projector uses an external 3D sync input to display the content.
3. To confirm the selection, press **ENTER**.

Setting the 3D sync output signal

This function is used for controlling and processing the 3D sync output signal.

1. Select **Menu > Image Settings > 3D Display > 3D Sync Out**.
2. Select the appropriate 3D sync out setting.
 - **To Emitter**—If the 3D sync out port is connected to an emitter, select **To Emitter** to transmit 3D signal to emitter and give to 3D glasses.
 - **To Next Projector**—Multiple projectors 3D application only. Select **To Next Projector** when the 3D sync out port is not connected to an emitter.
3. To confirm the selection, press **ENTER**.

Setting the frame delay

Adjust the frame delay which eliminates the odd colors and cross talk caused by timing difference. Frame delay is the time difference between the first 3D signal being given and the result being executed from current projector.

1. Select **Menu > Image Settings > 3D Display > Frame Delay**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Configuring the video settings

Configure the video settings to optimize the image performance, such as applying color to black and white videos, reducing luminance component noise, and so on.

Adjusting black and white video

Adjust a video image from black and white to fully saturated color. This feature is for video sources only.

1. Select **Menu > Image Settings > Video Options > Color**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Adjusting the color balance

Adjust the red-green color balance in NTSC video images. NTSC, named after the National Television System Committee, is the analog video color system used in North America and most of the South America countries. This feature is for NTSC video sources only.

1. Select **Menu > Image Settings > Video Options > Tint**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Adjusting the skin color

Adjust the color tone of human skin in videos.

1. Select **Menu > Image Settings > Video Options > Skin Color**.
2. Select appropriate skin color tone.
3. To confirm the selection, press **ENTER**.

Reducing the temporal noise

Remove the luminance component noise of the low light videos.

1. Select **Menu > Image Settings > Video Options > Temporal Noise Reduction**.
2. Select appropriate level for temporal noise reduction.
3. To confirm the selection, press **ENTER**.

Reducing the MPEG noise

MPEG compression causes block noise appears like small blocks in the image, and the image compression algorithms result in mosquito noise around the sharp edges in the image. This function is used to reduce the MPEG noise.

1. Select **Menu > Image Settings > Video Options > MPEG Noise Reduction**.
2. Select appropriate level for MPEG noise reduction.
3. To confirm the selection, press **ENTER**.

Setting the input levels

If the image is displayed by an analog signal, such as VGA signal, the image may have an odd color on the screen. These functions are used to adjust gain and offset error and correct the color.

Adjusting the color gain

Set the color gain to correct the color intensity of the image. This function is used when the image is displayed by VGA or component and the color is incorrect.

1. Select **Menu > Image Settings > Input Levels**.
2. Select appropriate color gain:
 - Red Gain
 - Green Gain
 - Blue Gain
3. Adjust the slider by arrow keys or press **ENTER** to input the value.
4. After inputting the value, press **ENTER** to apply.

Adjusting the color offset

Set the color gain to correct the degree of color difference of the image. This function is used when the image is displayed by VGA signal and the color is incorrect.

1. Select **Menu > Image Settings > Input Levels**.
2. Select appropriate color offset:
 - Red Offset
 - Green Offset

- Blue Offset
3. Adjust the slider by arrow keys or press **ENTER** to input the value.
 4. After inputting the value, press **ENTER** to apply.

Resetting the input levels

Reset all input levels parameters back to default.

1. Select **Menu > Image Settings > Input Levels > Reset to Default**.
2. Press **ENTER**.

Configuring picture settings

Depending on display content, choose the most suitable picture settings. Different picture settings have different color temperature, brightness, and so on.

1. Select **Menu > Image Settings > Picture Settings**.
2. Select the appropriate picture setting:
 - **Video**—Used for theater application. It sets the color temperature to 6000K with 70% of maximum brightness.
 - **Bright**—Used for large size or high brightness application. It sets the color temperature to 7500K with 100% brightness.
 - **Enhanced**—Used for images with richly saturated and vivid color. It is based on brightness mode.
 - **REC709**—Used for high-definition television. It sets the color temperature to 6500K with 80% of the maximum brightness.
 - **DICOM SIM**—Used for high contrast content, such as X-ray diagram. It sets the color temperature to 7500K with 65% brightness.
 - **Blending**—Used for multiple projector application. It sets the color temperature to 7000K with 85% of maximum brightness.
 - **HDR**—Used for displaying high dynamic range content for deepest blacks, brightest whites, and vivid cinematic color using REC.2020 color gamut.
 - **3D**—Used to display the 3D content. For more information on configuring 3D settings, see [Setting up 3D display](#) on page 36.
 - **2D High Speed**—Used for displaying 2D input signal at 120Hz.
 - **User**—Customized picture setting. See [Editing customized picture setting](#) on page 41 for further details of creating a customized picture setting.
3. Press **ENTER**.

Applying customized user configuration setting

Apply the previously saved user customized picture setting to the projector.

1. Before applying the customized picture setting, adjust the picture setting and save it using **Menu > Image Settings > Picture Settings > User** option.
2. Select **Menu > Image Settings > Apply to User**.
 - User Video
 - User Bright
 - User Enhanced
 - User REC709
 - User DICOM SIM
 - User Blending
 - User HDR
 - User 3D
 - User 2D High Speed
3. To apply the specific picture setting, select the required setting.
4. To confirm the selection, press **ENTER**.

Editing customized picture setting

Edit the previously saved customized picture setting.

1. Select **Menu > Image Settings > Apply to User**.
2. Select the customized image setting that you want to modify:
 - User-Video
 - User-Bright
 - User-Enhanced
 - User-REC709
 - User-DICOM SIM
 - User-Blending
 - User-HDR
 - User-3D
 - User-2D High Speed
3. Press **ENTER**.

Setting the contrast ratio

Use contrast enhancement function to raise the contrast ratio.

1. Select **Menu > Image Settings > Contrast Enhancement**.
2. Select the appropriate calculation method for contrast ratio:
 - **Dynamic Black™**—Adjusts the contrast ratio depending on the contents by minimizing the black levels in the projected image while electronically increasing the gain in the image. The result is enhanced detail and increased contrast ratio of 6500:1.
 - **Speed**—Adjusts the speed of the light source correction. The value ranges from 1 to 15. A lower value makes the correction slower and less aggressive while a higher value results in the faster correction.
 - **Strength**—Sets the strength of the dynamic contrast adjustment. The value ranges from 0 to 3, the higher the value the stronger the correction.
 - **Level**—Adjusts the light source when the brightness level of the current content gets lower than the set value. The value ranges from 50 to 100, indicating 50% to 100% of the constant brightness. The higher the value, the larger the range to adjust the light source.
 - **Real Black**—Turns off the laser light while projecting black content.
 - **Lights Out Timer**—Sets a timer for the laser light to turn off after detecting black content.
 - **Lights Out Signal Level**—Sets a black level value as the threshold for the Real Black function. The value can be selected from 0 to 5, with 0 being the darkest black and 5 being the brightest.
 - **Reset to Default**—Resets all contract enhancement settings to the default factory defaults.
3. To confirm the selection, press **ENTER**.

Enabling the image freeze

Pause the display screen despite any change in the source device.

1. Select **Menu > Image Settings > Image Freeze**.
2. To pause the screen, check **Image Freeze**.
3. To unfreeze the screen, press any button on the keypad or remote control.
4. Select **Yes**.

Setting the high dynamic range

High dynamic range (HDR) is set to increase the dynamic range which allows the full spectrum of the image to be seen. HDR significantly expands the range of contrast ratio and color to show a more realistic and natural image. After enabling this function, you can see details in the dark, at the same time, the bright part of the image is still visible.

1. Select **Menu > Image Settings > HDR**.
2. Select appropriate setting for HDR:
 - **Auto**—Auto detect HDR content.
 - **Level**—Select an appropriate HDR effect.
 - **HDR1**—Low HDR effect, used for bright images to increase the color saturation.
 - **HDR2**—Medium HDR effect, used for standard images to make them look more realistic and natural.
 - **HDR3**—Medium HDR effect, used for video content to improve image details.
 - **HDR4**—Strong HDR effect, used to improve image details in dark scenes.
3. To confirm the selection, press **ENTER**.

- The HDR function only works when the projector is receiving signal from the HDMI input. You must set Picture Settings to Bright.
- Enabling HDR disables the picture-in-picture/picture-by-picture (PIP/PBP) function.

Adjust the color of the image

Calibrate the accuracy of primary colors and the wall color, which can change because of lighting and environmental factors. Lighting and other environmental factors may slightly change how these colors appear on your screen. While the change is negligible in most cases, you may prefer to recover the originally intended color performance before trying to match colors from several projectors.

Adjusting primary colors

To achieve consistency use a color meter to measure the native primary colors-red, green, blue, and white, as they appear on the screen. Use hue, saturation and gain (HSG) to adjust each color component to essentially calibrate a projector to its surroundings, compensating for factors such as screen type, lamp and/or ambient lighting, and improves color accuracy and consistency in a group of projectors. It ensures a good starting point for further customizing and matching; however, is not critical for all installations.

1. Select **Menu > Image Settings > Color Matching > HSG Adjustment**.
2. To view a specific color while adjusting, press **ENTER** to enable **Auto Test Pattern**.
3. Select one primary color (red, green, blue, cyan, magenta, or yellow).
4. To edit hue of the primary color, adjust the slider or enter the color values of the primary color component you selected until satisfied with the colors.
 Hue values reflect the number of degrees of rotation around the wheel from the original color of the pixel. Increasing the value indicates counterclockwise rotation and decreasing the value indicates clockwise rotation.
5. To confirm the selection, press **ENTER**.
6. To edit saturation of the primary color, adjust the slider or enter the color values of the primary color component you selected until satisfied with the colors.
 Saturation values reflect the color shifting away from the primary color or toward white.
7. To confirm the selection, press **ENTER**.
8. To edit gain of the primary, adjust the slider or enter the color values of the primary color component you selected until satisfied with the colors.
 Increasing value indicates increasing the lightness, and decreasing the value indicates decreasing it to black.

9. To confirm your selection, press **ENTER**.
10. Repeat steps 3 to 9 for each primary color component, except white.
11. To edit the color of white by three components—red, blue and green—adjust the slider or enter the values until you are satisfied with the white.
12. To confirm your selection, press **ENTER**.
13. To reset the primary colors to their defaults, select **Reset to Default**.
14. To reset back to default setting, press **ENTER**.

Setting the wall color

Set the wall color so the projector can enhance the color performance customized for the specific wall.

1. Select **Menu > Image Settings > Color Matching > Wall Color**.
2. Select the preferred setting:
 - White
 - Gray 130
 - Light Yellow
3. Press **ENTER**.

Adjusting advanced image settings

Adjust the color value based on gamma, white peaking, color temperature, and save user settings for data recovery.

Adjusting the color value based on gamma setting

Adjust the color values to give a more detailed displayed image.

1. Select **Menu > Image Settings > Advanced Image Settings > Gamma**.
2. Select appropriate option:
 - Video
 - Film
 - Bright
 - CRT
 - DICOM
3. Press **ENTER**.

Adjusting the white peaking

Use white peaking to adjust the color of white. The maximum value of white peaking, 100, can increase the brightness of white to near 100%.

1. Select **Menu > Image Settings > Advanced Image Settings > White Peaking**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. Press **ENTER**.

Adjusting the color temperature

Adjust the color temperature as expressed in degrees Kelvin.

1. Select **Menu > Image Settings > Advanced Image Settings > Color Temperature**.
2. Select appropriate color temperature:
 - **Warmest**—Sets the color temperature to 5500K.
 - **Warm**—Sets the color temperature to 6500K.
 - **Cool**—Sets the color temperature to 7500K.
3. Press **ENTER**.

Saving user settings for data recovery

Create a recovery copy of all the user data. This information can be used later to recover settings if necessary.

1. Select **Menu > Image Settings > Advanced Image Settings > Backup Restore > Save**.
2. To save the user data, select an empty record.
One projector can save up to five backups.
3. To confirm the selection, press **ENTER**.
4. Select **Menu > Image Settings > Advanced Image Settings > Backup Restore > Restore**.
5. To restore a specific backup, select the required record.
6. To start restoring data, press **ENTER**.

- The recovery copy does not include information about the source and functions that can be operated directly from the remote control and that do not save the value after next power on. For example, Image Freeze.
- All other function values are saved to the recovery copy, except for the following:
 - Configuration > Lens Settings
 - Configuration > Communications > LAN/WLAN
 - Size & Position > Geometry Correction
 - Configuration > Menu Preferences > PIN Protect
 - Configuration > Date and Time
 - Configuration > Schedule

Configuring system settings

Learn how to configure the system settings.

Changing the language

Choose the language you want displayed on projector display panel and on-screen display.

1. Select **Menu > Configuration > Language**.

You can also select **Menu > Language**.

2. Select the appropriate language.
3. Press **ENTER**.

Adjusting lens settings

Adjust various lens settings including focus, zoom, lens position, memorizing lens position and locking the lens motors.

Aligning the image with focus and zoom

Ensure that the image reflected from the digital micromirror device (DMD) is parallel and centered with the lens and screen.

1. Display an image or test pattern that can be used to analyze image focus and geometry.
2. Press **FOCUS** on keypad or remote control.

You can also select **Menu > Configuration > Lens Settings > Focus**.

3. Use the up and down arrow keys to adjust the focus of the image.
4. To exit the menu, press **EXIT**.

5. Press **ZOOM** on keypad or remote control.

You can also select **Menu > Configuration > Lens Settings > Zoom**.

6. Use the up and down arrow keys to zoom in or out of the image.

7. To exit the menu, press **EXIT**.
8. To refine your adjusts, repeat steps 2 to 7.

Adjusting lens position

Shift the lens to the specific position.

1. Display an image or test pattern that can be used to analyze image location.
2. Press **LENS** on keypad or **LENS H/LENS V** on remote control.
You can also select **Menu > Configuration > Lens Settings > Lens Shift**.
3. Use the arrow keys to adjust the lens position.
4. To exit the menu, press **EXIT**.

Saving lens setting

Save the lens position. One projector can save maximum up to five lens settings.

1. Select **Menu > Configuration > Lens Settings > Lens Shift Memory > Save Current Settings**.
2. To save the lens setting, select an empty record.
3. To confirm the selection, press **ENTER**.

Applying the previous lens setting

Apply the previously saved lens setting to the projector.

1. Before applying the previous lens setting, you need to save the lens setting.
See [Saving lens setting](#) on page 49 for further details.
2. Select **Menu > Configuration > Lens Settings > Lens Shift Memory > Apply Position**.
3. To apply specific lens setting, select the required record.
4. To confirm the selection, press **ENTER**.

Locking the lens motor

Prevent all lens motors from moving. It disables the zoom, focus, and offset settings, locking out any changes and overriding all other lens features. This feature prevents accidental lens position changes in multiple projectors installations.

1. Select **Menu > Configuration > Lens Settings > Lock all Lens Motors**.
2. To enable locking of all lens motors, select **Locked**.
3. To unlock all lens motors, select **Allow**.
4. To confirm the selection, press **ENTER**.

Resetting the lens to home position

Set the lens offset back to the home position.

1. Select **Menu > Configuration > Lens Settings > Lens Calibration**.

You can also press **LENS** on keypad or **LENS H/LENS V** on remote control.

2. Press **ENTER**.
3. To start the lens calibration, select **OK**.

To make sure the lens shift is functioning properly, Christie recommends to calibrate the lens every time the lens are changed.

Selecting screen image orientation

Specify the orientation to use for the image. The projector supports front projection, rear projection, front projection inverted, or rear projection inverted.

1. To invert the projection image, select **Menu > Configuration > Ceiling Mount**.
2. Select appropriate ceiling mount settings:
 - **Off**—Disables the ceiling mount setting.
 - **On**—Enables the ceiling mount setting.
 - **Auto**—Detects the orientation automatically.
3. To confirm the image orientation, press **ENTER**.
4. To do a rear projection, select **Menu > Configuration > Rear Projection**.
5. To swap, press **ENTER**.

Adjusting on-screen display menus

Adjust various on-screen display (OSD) settings including the position, OSD transparency and timing for OSD to disappear.

Determining the on-screen display position

Adjust the location of the on-screen display (OSD) menus.

1. Select **MENU > Configuration > Menu Preferences > Menu Horz Offset** or **Menu Vert Offset**.
2. To determine the location on the screen where you want OSD to appear, adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

Showing messages

Enable or disable the on screen message dialogs. For example, input source, IP Address, Slot information, Gamma information, and so on.

1. Select **Menu > Configuration > Menu Preferences > Show Messages**.
2. To swap, press **ENTER**.

Setting the transparency of the on-screen display position

Change the on-screen display (OSD) menus background to be transparent. As the value increases, more of the image behind the menu is visible.

1. Select **MENU > Configuration > Menu Preferences > Menu Transparency**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value.
3. After inputting the value, press **ENTER** to apply.

If the projector has not detected an input source, the Menu Transparency function is off.

Changing the splash screen

Select splash screen which is the screen with no source is displayed.

1. Select **Menu > Configuration > Menu Preferences > Splash Screen Setup**.
2. Select the appropriate splash screen:
 - Factory Logo
 - Blue
 - Black
 - White
3. Press **ENTER**.

Setting time out for on-screen display

Adjust the time for on-screen display to disappear.

1. Select **Menu > Configuration > Menu Preferences > Menu Time Out**.
2. Select the appropriate time:
 - Off
 - 1 Min
 - 3 Min
3. Press **ENTER**.

Setting up password protection

Protect your projector with a password. Once enabled, you must enter the password before you can project an image.

1. Select **Menu > Configuration > Menu Preferences > PIN Protect**.
2. Enter a password by number keys.
3. To confirm the password, select **OK**.

Changing password

Change the current password to a new password.

1. Select **Menu > Configuration > Menu Preferences > Change PIN**.
2. Enter current password by number keys.
3. Select **OK**.
4. Enter new password by number keys.
5. Select **OK**.
6. To confirm the password, enter new password again by number keys.
7. Select **OK**.

Setting up power mode

Adjust various projector's power settings including the shutdown time, sleep timer, and standby mode.

Setting the standby mode

Determine which standby mode the projector is in when AC power on.

1. Select **Menu > Configuration > Power Management > Standby Mode**.
2. Select the appropriate mode:
 - **0.5W mode**—Less power consumption which does not have the ability to monitor the projector over a network cable in standby mode.
 - **Communication mode**—More power consumption in standby mode which allows you to monitor the projector over a network cable.
3. Press **ENTER**.

Communication mode is the projector's default standby mode. After performing factory reset, manually set the standby mode to 0.5W mode to have less power consumption (<0.5W).

Setting the AC power

Enable or disable to power on the projector directly.

1. Select **Menu > Configuration > Power Management > AC Power On**.
2. To toggle, press **ENTER**.

Setting the time for auto shutdown

Set up a time for automatically turns off the projector after no signal is detected for a preset number of minutes. If an active signal is received before the projector powers down, the image is displayed.

1. Select **Menu > Configuration > Power Management > Auto Shutdown**.
2. Select the appropriate time to automatically turn off the projector when there is no signal.
3. To confirm the selection, press **ENTER**.

Setting the sleep timer

Set up a time for automatically power off the projector, after it has been on for a specified amount of time.

1. Select **Menu > Configuration > Power Management > Sleep Timer**.
2. Select the appropriate time to automatically turn off the projector.
3. To confirm the selection, press **ENTER**.

Enabling high altitude setting

Enable high altitude mode when altitudes ≥ 2000 m. The fan operates at high speed to ensure sufficient air flow for high altitudes; however, the noise level of the projector is increased.

1. Select **Menu > Configuration > High Altitude**.
2. To toggle, press **ENTER**.

Setting the projector communication

Enable the receivers and the wired keypad to communicate with the projector from the remote. The front and top IR sensors receive transmissions from the IR remote. Keep the transmission path to these sensors unobstructed for uninterrupted communications with the projector.

1. Select **Menu > Configuration > IR Control**.
2. To enable the top IR sensor, select **Top**.
3. To confirm the selection, press **ENTER**.
4. To enable the front IR sensor, select **Front**.
5. To confirm the selection, press **ENTER**.

6. To enable the signal from the HDBaseT Box, select **HDBaseT**.
7. To confirm the selection, press **ENTER**.

Enabling the 12V Trigger

The 12V trigger is used for electrical projector screens. The projector screen is automatically lowered or raised when the projector is switched on or off.

1. Select **Menu > Configuration > 12V Trigger**.
2. To toggle, press **ENTER**.

Configuring communications

Define and control how single or multiple projectors are linked with each other and with controlling device.

Setting network environment

Determine the communication settings such as network setup, serial port information, and so on.

Adjusting LAN setting

Set up network configuration for wire networking.

1. Select **Menu > Configuration > Communications > LAN**.
2. Set up the appropriate setting:
 - **MAC Address**—Displays the network MAC address value.
 - **Network Status**—Displays the network status
 - **LAN Interface**—Displays the LAN interface. Select either **RJ-45** or **HDBaseT** and press **ENTER** to save.
 - **DHCP**—Enables or disables the DHCP to automatically get IP address, subnet mask, and so on.
 - **IP Address**—Assigns the network IP address.
 - **Subnet Mask**—Assigns the network subnet mask.
 - **Default Gateway**—Assigns the network default gateway.
 - **Primary DNS**—Assigns the primary DNS.
 - **Secondary DNS**—Assigns the secondary DNS.
3. To apply the LAN settings, select **Apply**.

Using the web interface

To control the projector through the web interface, do the following:

1. Start up the web browser on your computer or mobile devices.
2. Enter the IP address set on the projector into the URL of the web browser.
3. Enter the user name and password to login. After a successful login, you can control the projector over the web interface.

Using the RS-232C interface

To control the projector through the RS-232C interface, do the following:

1. Connect your computer and the projector directly using the RS-232 cable.
2. Set the same baud rate in both your computer and projector. Use commands to control the projector.

Re-connecting the network

After the network is disconnected and timeout via RJ-45/HDBaseT/Wifi, the browser will refresh the page automatically and show "HTTP404 (Not Found)" error message.

If user wants to re-control the projector, user must login in the control page with account and password again.

Adjusting WLAN setting

Set up network configuration for wireless networking.

1. Select **Menu > Configuration > Communications > WLAN**.
2. Set up the appropriate setting:
 - **SSID**—Displays the SSID of the wireless network.
 - **Enable**—Enables or disables the wireless functionality.
 - **Start IP**—Assigns the start IP address of the wireless network.
 - **End IP**—Assigns the end IP address of the wireless network.
 - **Subnet Mask**—Assigns the subnet mask of the wireless.
 - **Default Gateway**—Assigns the gateway of the wireless.
3. To apply the WLAN settings, select **Apply**.

Adjusting network setting

Set up network configuration setting, such as reset back to default.

1. Select **Menu > Configuration > Communications > Network**.
2. Set up the appropriate network setting:
 - **Show Network Message**—Enables or disables to display of the network message.

- **Reset to Default**—Resets the network configuration setting, including LAN setting and WLAN setting, to default.
3. To apply the network configuration, press **ENTER**.

Setting serial port baud rate

Select the serial port and baud rate.

1. Select **Menu > Configuration > Communications > Serial Port Baud rate**.
2. Set up the appropriate baud rate.
3. To confirm the selection, press **ENTER**.

Enabling serial port echo

Enable or disable to allow the CLI command pass through.

1. Select **Menu > Configuration > Communications > Serial Port Echo**.
2. To swap, press **ENTER**.

Setting the projector address

Assign an address to the projector for IR remote connection.

1. To set the projector address, select **Menu > Configuration > Communications > Projector Address**.
2. Select specific number for this projector from 0 to 9. The projector responds to the IR remote set to the same address as the projector or to the IR remote set to address 0.
3. To match up with the projector address, press **PROJ** and specific number key.

Adjusting the back light settings

Control the back light behavior and timeout setting for the keypad and status LED.

1. Select **Menu > Configuration > Backlight Preferences > Keypad Backlight**.
2. Select the appropriate setting for keypad backlight.
3. To confirm the selection, press **ENTER**.
4. Select **Menu > Configuration > Backlight Preferences > Status LED**.
5. Select the appropriate setting for status LED.
6. To confirm the selection, press **ENTER**.

Setting the hot key

To directly call out a function without going through the layers of the on-screen display (OSD) menus, select a specific function for a hot key. To access this function, press **HOT KEY** on the remote control.

1. Select **Menu > Configuration > Hot-Key Settings**.
2. Select the one function for the hot key:
 - Size Presets
 - Picture Settings
 - Default Value
 - Detail
 - Contrast Enhancement
 - Light Source Mode
 - Image Freeze
 - Information
 - Disable Warp/Blend
3. To set the selected function as the hot key, press **ENTER**.

When the hot key is set to Disable Warp/Blend, pressing the hot key once disables the currently applied warp and blend. Pressing the hot key again enables the function and returns the warp and blend to the screen.

Configuring date and time settings

Configure the date and time settings of the projector. Make sure these settings are accurate if you want to use the schedule feature.

1. Select **Menu > Configuration > Date and Time**.
2. Set up the appropriate setting:
 - **Clock Mode**—Sets the clock mode to Local or Network. A NTP Server is required if the clock mode is set to Network.
 - **Date**—Sets a date for the projector. The date format is Year/Month/Date.
 - **Time**—Sets the time for the projector.
 - **Daylight Saving Time**—Configures the daylight saving settings if required.
 - **NTP Server**—Selects a NTP Server for the network clock mode.
 - **Time Zone**—Selects an appropriate time zone for the network clock mode.
 - **Update Interval**—Sets the date and time update interval.
3. To apply the date and time settings, select **Apply**.

Scheduling events

Schedule feature allows you to schedule various projector functions at the given date and time.

1. Select **Menu > Configuration > Schedule**.
2. View or set up the appropriate setting:
 - **Date and Time**—Adjusts the date and time for the projector.
 - **Schedule Mode**—Enables the schedule mode if you want to schedule projector functions.
 - **View Today**—Displays events scheduled for the current day.
 - **Monday to Sunday**—Sets up schedule for days of a week.
 - **Event 01-016**—See step 5 in [Setting up a schedule](#) on page 59 for a full list of available actions.
 - **Copy Events To**—If several days of a week have the same schedule, create a fully scheduled day, select **Copy Events To**, and select these days of the week where you want to copy the full schedule.
 - **Reset Schedule**—Resets all of the schedule settings to the factory defaults.

Setting up a schedule

1. Select **Menu > Configuration > Schedule**.
2. Select the appropriate day of the week when you want to schedule events and press **ENTER**. The schedule table for the selected day is shown.
3. Select the first event slot and press **ENTER**. The event submenu is shown.
4. Select the **Time** when the chosen event must occur, for example at 11AM.
5. Select the appropriate action to take place:
 - Power Settings
 - Off/On
 - Power On
 - 0.5W Mode
 - Communication Mode
 - Input Source
 - Off
 - HDMI1
 - HDMI2
 - DVI-D
 - 3G-SDI
 - HDBaseT

- Light Source Mode
 - Off
 - Constant Power
 - Constant Intensity
 - ECO 1
 - ECO 2
 - Shutter
 - Off
 - Shutter On
 - Shutter Off
6. To confirm the selection, press **ENTER**.
 7. Press **EXIT** and return to the schedule table of the selected day.
 8. Repeat steps 2 to 7 to schedule more events for the selected day.
You can schedule up to 16 events per day. To access the events on the next page, press the arrow keys.
 9. To schedule events for other days, press **EXIT** to return to the main Schedule menu and repeat steps 2 to 8.

Configuring light settings

Learn how to configure the light settings.

Setting light source mode

Set up light source mode depending the environment.

1. Select **Menu > Light Source > Light Source Mode**.
2. Select appropriate light source mode:
 - **Constant Power**—Enable Constant Power to set the projector brightness to a specific level controlled by the laser diode power. See [Adjusting the light power](#) on page 62 for further details of setting the laser diode power.
 - **Constant Intensity**—After enabling Constant Power, select Constant Intensity to maintain current constant brightness and color settings. This function can remain at current setting for longer period of time than Constant Power mode and is used for long-term projecting or blending.

 - Perform light sensor calibration before enabling Constant Intensity.
 - When Constant Intensity is enabled, Dynamic Black and Real Black functions are automatically disabled.
 - When Picture Settings is changed under Constant Intensity, the light source mode automatically changes back to Constant Power.
 - **ECO 1 (80%)**—Set the projector to 80% constant brightness and color settings.
 - **ECO 2 (50%)**—Set the projector to 50% constant brightness and color settings.
3. Press **ENTER**.

Adjusting the light power

Set the value of the laser diode power. The power levels can be managed to obtain the brightest picture or longest light source life. The minimum setting of the light power is 30% brightness and color setting, and the maximum is 100% brightness and color setting.

1. Select **Menu > Light Source > Constant Power**.
2. Adjust the slider by arrow keys or press **ENTER** to input the value you selected.
3. After inputting the value, press **ENTER** to apply.

Diagnostic tools

Follow these procedures to help diagnose issues with GS Series 2K projectors.

Viewing projector information

View the status of the projector, source information, light source information, and communication information. The information is read-only.

1. To view the status of the projector, such as model name, serial number, and so on, select **Menu > Information > Status Info**.
2. To view source information, such as active source, signal format, and so on, select **Menu > Information > Source Info**.
3. To view the communication information, such as network status, projector's IP address, subnet, and so on, select **Menu > Information > Communications Info**.
4. To view the light source information, such as total projector hours and laser diode (LD) hours, select **Menu > Information > Light Source Info**.
5. To view the firmware information, such as firmware (FW) version, F-MCU version, and so on, select **Menu > Information > Firmware Version Info**.

Selecting a test pattern

Use the projector's test patterns to assist with configuration of the projector and to diagnose any issues that may occur.

1. Select Test Pattern on remote control.
You can also select the test patterns from **Menu > Test Pattern**.
2. Scroll through the list of test patterns by left and right arrow keys on remote control.
3. Select the required test pattern.
4. To confirm your selection, press **ENTER**.

Restoring factory default settings

Restoring factory settings removes all custom device settings.

To avoid warranty violation, only Christie-qualified technicians can reset factory defaults.

1. Select **MENU > Configuration > Service**.
2. Enter the service password.
3. Select **Factory Reset**.

All customized settings are set to the default factory settings.

4. At the confirmation prompt, select **OK**.

Configuring input settings

Learn how to configure the input source and picture in picture (PIP)/picture by picture (PBP) settings.

Setting main input source

Set up the active input to be used as the main image.

1. Select **Menu > Input Switching & PIP > Main Input**.
2. To select the active input, press **ENTER**.

Setting second input source

Select an active input to be used as the picture in picture (PIP)/picture by picture (PBP). Before setting the second input source, make sure to enable PIP/PBP otherwise this item is disabled.

1. Select **Menu > Input Switching & PIP > PIP/PBP Input**.
2. To select another active input, press **ENTER**.

Enabling second input source

To activate the picture in picture (PIP)/picture by picture (PBP) setting, switch on this function.

1. Select **Menu > Input Switching & PIP > PIP/PBP Enable**.
2. To swap, press **ENTER**.

To update the PIP/PBP mode, run the **Input Switching & PIP > Auto Image Resync** function. Auto Image Resync synchronizes the main input and the sub input sources simultaneously.

Swapping main input and second input source

Switch the main input source with second input source. Before this action, make sure to enable PIP/PBP.

1. Select **Menu > Input Switching & PIP > Swap**.
2. To swap, press **ENTER**.

Setting the size of second input source

Set the size of picture in picture (PIP)/picture by picture (PBP). Before this action, make sure to enable PIP/PBP. See [Input sources layout and size](#) on page 66 for further details of the layout and size.

1. Select **Menu > Input Switching & PIP > Size**.
2. Select the appropriate size, small, medium or large, for PIP/PBP input source.
3. To confirm the selection, press **ENTER**.

Setting up the display layout with two input sources

Set the display location for main input source and second input source on the screen. Before this action, make sure to enable PIP/PBP. See [Input sources layout and size](#) on page 66 for further details of the layout and size.

1. Select **Menu > Input Switching & PIP > Layout**.
2. Select the appropriate layout.
3. To confirm the selection, press **ENTER**.

Input sources layout and size

A P indicates the primary source region (lighter color) and an asterisk (*) indicates both regions are the same size.

PIP/PBP Layout	PIP/PBP Size		
	Small	Medium	Large
PBP, Main Left			
PBP, Main Top			

PIP/PBP Layout	PIP/PBP Size		
	Small	Medium	Large
PBP, Main Right			 *
PBP, Main Bottom			 *
PIP, Sub Bottom Right			
PIP, Sub Bottom Left			
PIP, Sub Top Left			
PIP, Sub Top Right			

Setting the timing detection mode

Set timing detection mode to enhanced or normal to support additional PC timings. When the projected picture is not completed, this function is used to adjust the picture.

1. Select **Menu > Input Switching & PIP > Auto Image Resync**.
2. Select the appropriate mode:
 - **Normal**—If the input signal source has been plugged to the same port on the projector and not been replugged, the projector can process the signal at a faster speed.
 - **Enhanced**—Every time the projector receives the signal, it analyzes the source signal and verifies the integrity of it. This ensures the optimal image quality but consumes more time.
3. To confirm the selection, press **ENTER**.

Setting the input searching method

Set the most suited method for searching input source.

1. Select **Menu > Input Switching & PIP > Input key**.
2. Select the appropriate searching method:
 - **Change Sources**—Changes the source manually by pressing **INPUT** on the keypad or remote control.

- **List all Sources**—Selects listing all the input sources available for selection.
 - **Auto Sources**—Automatically searches the source.
3. To confirm the selection, press **ENTER**.

Setting up the backup input

Use the Backup Input function to set up two input sources with the same timing specification using the HDMI switch/splitter. Upon loss of one input source due to the damaged cable, the projector automatically switches to the other source. The switching time is less than 1 second.

- The supported sources are HDMI 1, HDMI 2, DVI, and HDBaseT.
- PIP/PBP, Auto Source, 3D, and 120Hz timing conditions are not supported.
- The Primary and secondary source must have the same Resolution, Horz Refresh/Frame Rate, and Color Space settings.

1. Select **Menu > Input Switching & PIP > Backup Input**.
2. Set up the appropriate setting:
 - **Auto Switch**—Selects the checkbox to enable automatically switch to backup input source when the current signal fails.
 - **Current Signal**—Shows the current active signal.
 - **First Input**—Selects the first input. When the selected source is activated, the on-screen display (OSD) menu displays the signal's Resolution, Horz Refresh, and Color Space.
 - **Second Input**—Selects the second input. When the selected source is activated, the OSD menu displays the signal's Resolution, Horz Refresh, and Color Space.

Adjusting the sub image

Adjust the image related settings for the sub source in PIP mode.

1. Select **Menu > Input Switching & PIP > Adjust Sub Image**.
2. Set up the appropriate setting for sub source:
 - **Brightness**—Adjust the brightness of the sub image to adapt to various ambient light.
 - **Contrast**—Adjust the contrast ratio of the sub image.
 - **Color Space**—Select a color space for the sub image.

Enabling low latency mode

Enable the Low Latency Mode to minimize the input lag. This function is used for live broadcasting, streaming media, and similar installations.

1. Select **Menu > Input Switching & PIP > Low Latency Mode**.
2. Select the appropriate mode.

- **Normal**—No functional restrictions but longer delay time.
- **2D Ultra**—Reduces latency in 2D mode but sets restrictions when warping the image.

2D Ultra does not support 3D, 4K timing, input timings outside the range of 30fps to 120fps, PIP/PBP mode, and image freeze.

3. To confirm the selection, press **ENTER**.

Configuring the HDMI setting

Enable or disable the Extended Display Identification Data (EDID) for HDMI 2.0 to play videos from hardware devices, such as DVD players.

The most commonly used HDMI versions are HDMI 1.4 and 2.0, with differences in bandwidth. HDMI 1.4 has limited rate of 2K. DWU880-GS, DWU880A-GS, DWU1100-GS, and DWU1100A-GS projectors are compatible with both HDMI 1.4 and HDMI 2.0. When the projector is connected to a hardware device supporting HDMI 1.4 only, disable the EDID for HDMI 2.0 to play the videos properly.

1. Select **Menu > Input Switching & PIP > EDID**.
2. Select the **HDMI 1** or **HDMI 2** item where you want to enable EDID.
3. Set **1.4** or **2.0**.
4. To confirm the setting, press **ENTER**.

Configuring the HDMI output

Set the default HDMI output port.

1. Select **Menu > Input Switching & PIP > HDMI Out put**.
2. Select **HDMI 1** or **HDMI 2** as the HDMI output.
3. To confirm the setting, press **ENTER**.

If multiple projectors are connected to each other in a daisy chain, the HDR signal output is determined by the first projector and PC handshake.

Signal connectivity specifications

Identify the signal connectivity specifications for GS Series 2K projectors.

The list of formats listed below are not exhaustive and other formats may be supported. For more information, contact Christie Technical Support.

HDMI1/HDMI2 video formats

Identify the video formats for the HDMI1/HDMI2 input.

Signal Type	Signal Format	Resolution	Aspect Ratio		V Sync (Hz)	RGB			YCbCr 4:4:4			YCbCr 4:2:2
						8 bit	10 bit	12 bit	8 bit	10 bit	12 bit	8 bit
PC	VGA	640 x 350			85	V	V	V	V	V	V	V
		640 x 400		16:10	85	V	V	V	V	V	V	V
		640 x 480	1.33	4:3	60	V	V	V	V	V	V	V
					72	V	V	V	V	V	V	V
					75	V	V	V	V	V	V	V
					85	V	V	V	V	V	V	V

Picture-in-picture/picture-by-picture (PIP/PBP) compatibility

The following table details the picture-in-picture/picture-by-picture (PIP/PBP) compatibility.

	HDMI-1	HDMI-2	DVI	HDBaseT	3G-SDI
HDMI-1		V	V	V	V
HDMI-2	V		V	V	V
DVI	V	V		V	V
HDBaseT	V	V	V		V
3G-SDI	V	V	V	V	

- (v): PIP/PBP combinations are enabled.

Regulatory

This product conforms to the following regulations related to product safety, environmental requirements and electromagnetic compatibility (EMC).

Safety

- UL 62368-1:2014, CAN/CSA-22.2 NO. 62368-1-14
- IEC 60950-1:2005, AMD1:2009, AMD2:2013
- IEC 62368-1:2014
- EN 62368-1:2014 + A11:2017

Laser safety

- IEC 62471-5 - Photobiological safety of lamps and lamp systems - Part 5: Image projectors
- IEC 60825-1: 2014 - Safety of Laser Products - Part 1: Equipment Classification and Requirements

Electro-magnetic compatibility

Emissions

- FCC CFR47, Part 15, Subpart B, Class A/B - Unintentional Radiators
- CAN ICES-003 (A) / NMB-003 (A)
- EN55032:2015 - Information Technology Equipment Radio Disturbance Characteristics - Limits and Methods of Measurements
- IEC 61000-3-2/EN61000-3-2 - Limits for Harmonic Current Emissions
- IEC 61000-3-3/EN61000-3-3 - Limitations of Voltage Changes, Voltage Fluctuations, and Flicker

Immunity

- EN 55035 : 2017 - EMC Requirements - Information Technology Equipment - Immunity Characteristics - Limits and Methods of Measurements

Environmental

- EU Directive (2011/65/EU) on the restriction of the uses of certain hazardous substances (RoHS) in electrical and electronic equipment and the applicable official amendment(s)
- EU Directive (2012/19/EU) on waste and electrical and electronic equipment (WEEE) and the applicable official amendment(s)
- Regulation (EC) No 1907/2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) and the applicable official amendment(s)
- China Ministry of Information Industry Order No.39 (02/2006) on the control of pollution caused by electronic information products, hazardous substances concentration limits (SJ/T11363-2006), and the applicable product marking requirement (SJ/T11364-2006)
