EverFocus®

Release Note for ECOR264-X1 Firmware Version 1.2.9

Release Date: 11/30/2010

Fixes:

1. Improved remote viewing network stability in many environments
2. Issue with incomplete web interface screen icons has been resolved

Features added:

1. ***Quick Archive*** function – copy the previous 10 (or 20, 30, 60, 90) minutes of video from current time for all cameras with a single button press, even if front panel keys are locked. Leave a blank DVD in the drive in case of events/emergencies; press and hold the COPY key, give the DVD to the police when it ejects (automatically copies player software, too). Copies to USB (if present) first, even if blank DVD is present. If insufficient space for requested time, fills available media, ending at current time.
2. ***Local Archive*** function control from a remote location. Initiate Quick Archive from standard IE web interface, burn the video AT THE DVR regardless of where you are. Or, avoid having to copy GB of data across a slow WAN connection – set up an on-demand COPY from your PC to write the video onto the USB or DVD AT THE DVR!!
3. ***Dual Remote/Mobile Stream*** setting option. Choose:
   a. H.264 for iPhone and Android MobileFocus apps and standard IE PC web interface.
   b. MJPEG for general web browser viewing on typical smart phones and other platforms (FireFox, Safari, Opera)
4. ***PTZ Step Control*** option for IE web interface allows control of PTZ reaction speed to commands via web.
