DESCRIPTION:

The IDT54/74FCT800 series is built using an advanced dual metal CMOS technology.

The IDT54/74FCT840 series bus interface latches are designed to eliminate the extra packages required to buffer existing latches and provide extra data width for wider address/data paths or buses carrying parity. The IDT54/74FCT841 is a buffered, 10-bit wide version of the popular '373 function.

All of the IDT54/74FCT800 high-performance interface family are designed for high-capacitance load drive capability, while providing low-capacitance bus loading at both inputs and outputs. All inputs have clamp diodes and all outputs are designed for low-capacitance bus loading in the high-impedance state.

PIN DESCRIPTION

Name	I/O	Description
CLR	I	When $\overline{\text{CLR}}$ is LOW, the outputs are LOW if $\overline{\text{OE}}$ is LOW. When $\overline{\text{CLR}}$ is HIGH, data can be entered into the latch.
Di	I	The latch data inputs.
LE	I	The latch enable input. The latches are transparent when LE is HIGH. Input data is latched on the HIGH-to-LOW transition.
Yi	O	The 3-state latch outputs.
$\overline{\text{OE}}$	I	The output enable control. When $\overline{\text{OE}}$ is LOW, the outputs are enabled. When $\overline{\text{OE}}$ is HIGH, the outputs (Y i) are in the high-impedance (off) state.
$\overline{\text{PRE}}$	I	Preset line. When $\overline{\text{PRE}}$ is LOW, the outputs are HIGH if $\overline{\text{OE}}$ is LOW. Preset overrides $\overline{\text{CLR}}$.
