

User's guide of the BIOS Flash Switch V1.0

Thank you very much for using Legend computer product and it is a great honor for us that you have become one of our users. In order to protect the computer, the BIOS Flash Switch can availablely prevent the virus from attacking BIOS.

BIOS Flash Switch

The switch is on
rear "I/O"

ON BIOS Flash Unlocked

OFF BIOS Flash Locked

The methods of using are as follows:

1. Using BIOS Flash tool to update BIOS or setup the preventing the virus from rewriting BIOS.

State of switch	State of work
ON	When unlocked, the BIOS boot block area can be updated. But can't prevent the virus from attacking BIOS.
OFF	When locked, the BIOS cannot be updated. But can prevent the virus from attacking BIOS.

2. BIOS Flash Switch won't affect your installation of Windows 95/98 operating system. When you install other operating system, according to your installation situation, determine whether you require adjusting BIOS Flash Switch.

3. Please shut off your computer at first, and then adjust BIOS Flash Switch.

CAUTION: Don't adjust switch in the computer running condition.

4. Please set BIOS Flash Switch "ON" at first, when adding a new adapter or plugging and pulling peripheral equipment such as mouse, and adjusting location of adapters inside the computer. When the adapters installation finish, and smoothly running system, you may set the switch "OFF".
