Installation Procedure

Choose one of the following two installation procedures (direct installation or indirect installation) depending on your system environment. In most cases, choose the direct installation procedure (i.e., installing by accessing the Internet from your computer).

* The numbers in the illustrations above indicate the sequence of the installation procedure.

NOTE: You can de-authorize the license of the installed system software, then install it on another console. However, you will be unable to use the de-authorized console until you re-install or re-authorize the software.

□ PRODUCT ID

This is a number unique to each software package. This number is required to obtain the access key. It is printed on a label on the CD-ROM case.

□ Registration code

This is a number unique to each console. This number is required to obtain the access key. It is automatically created from the data inside your console. If you are installing a different software package (such as an Add-On Effects package), this number will be different.

□ Access key

This is required to install the system software. You must obtain the access key from the authentication server via the Internet using the PRODUCT ID and registration code.

NOTE: If you lose the registration code or access key, you can obtain them again. You will need the PRODUCT ID to do so. Be sure to keep the PRODUCT ID in a safe place after installation.

⚠ Installation Notes

- The software can be installed on only one console.
- You will be responsible for the entire installation procedure.
- Installing the software will erase all user memories in the console and initialize all settings. Be sure to back up important data before installation.
- During the installation procedure, do not turn off the power to the console, remove the cables, or operate the computer in a way not instructed in this manual. Otherwise, the console may malfunction.
- This software program updates the system version of the console from the computer via USB connection. You cannot install the software using any driver other than the Yamaha USB-MIDI Driver.
- If the installation fails for reasons such as a defective cable, turning on the power to the console will start the console in Flash Update mode, instead of normal mode. In this case, replace the cable and try the installation again.
- If a second installation attempt fails and the console does not operate properly, consult your Yamaha dealer.
- Exit or quit all open application programs before you start installation. During installation, do not execute other programs or activate a window.
- If the computer sleeps in energy saving mode, data transmission to the console may be stopped. Cancel such modes to prevent the computer from falling asleep.
- Before installing the software, install the Yamaha USB-MIDI Driver. See the Studio Manager Installation Guide for more information on installing drivers.
- Make sure that the Thru setting of the Yamaha USB-MIDI Driver is turned off.
(Windows users: Select [Control Panel → MIDI-USB Driver → Thru OFF].)
(Macintosh users: Select [Apple Menu → Control Panels (System Preferences) → Yamaha USB MIDI Patch → Thru Off].)
- Do not connect any USB devices to the computer other than the console, USB mouse, and USB keyboard. Connect the console to the computer's USB port directly without using a USB hub.

[DM2000 users] Updating Flash Update

If you are using the DM2000, you must use the following procedure to update FLASH UPDATE (a portion of the system software) before you begin the installation. If you fail to update FLASH UPDATE first, system software installation may fail and the console may malfunction.

Installation will initialize data in the DM2000's user memories. Be sure to back up important data using MIDI Bulk Dump or Studio Manager (refer to the DM2000 Owner's Manual).

After you update Flash Update, install the system software. When you finish updating Flash Update, the DM2000 is temporarily unavailable for operation.

- 1 **Make sure the power to the DM2000 is turned off, then insert the included SmartMedia disk (Firmware) into the card slot on the DM2000.**
- 2 **Turn on the power to the DM2000. After counting down, the DM2000 starts updating Flash Update.**
The updating process takes about 30 seconds. When the update is complete, the DM2000 displays the usual screen. Install the system software.

Do not turn off the power during the Flash Update updating process.

Direct installation

If you can access the Internet directly from your computer, follow the steps below to install the software. See page 8 if you access the Internet from a different computer.

The installation procedure will initialize data in the user memories in the console. Be sure to back up important data using MIDI Bulk Dump or Studio Manager. (Refer to the DM2000/02R96/DM1000 Owner's Manual.)

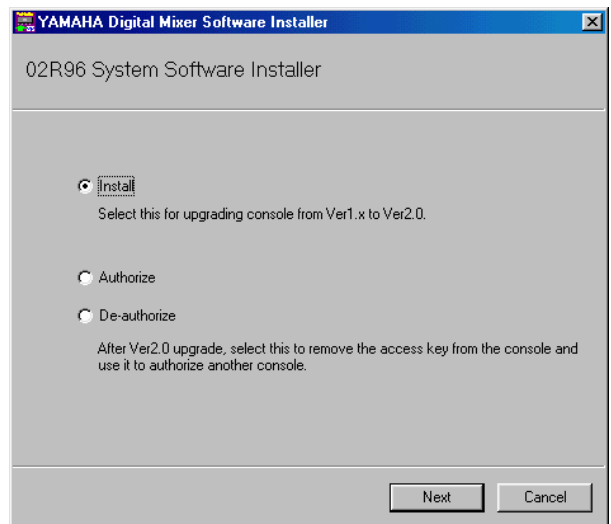

NOTE: The following instruction refers to installing the software in the 02R96 from a connected computer that runs Windows 98SE. However, the basic installation procedure also applies globally to any OS or console. Steps that vary with different operating systems will be explained separately.
