Maximum Depth Penetration 27Mm. Uses A Pp3 Size Battery Sold Separately. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. You cant use it to any degree of accuracy that would confidently allow you to drill in a particular place. I have tried to put it on a ceiling to detect the stud, but it bleeps everywhere. Even on the wall it bleeps everywhere. I tried different settings but it still does not work. I have followed the instructions but it still bleeps. It even bleeps on the human body. It detects electrical wires, yes, but it also claims theres electrical wires basically anywhere in a wall that has a wire or some metal in it. No use for being confident in where its safe to drill. We reserve the right to change specifications at any time without prior notice. Please try again later. Registered in England 541132. Registered office Authorised and regulated by the Financial Conduct Authority Financial Services Register number 204550. The financial Machine Mart Limited is registered in England Find out more about. After many years of designing and making their own brands not to mention delivering all over the country other tool brands as well, the company bought premises in Chandler Ford, Hampshire via auction in 1962 which really begun the big growth that is shown by the success today. <http://mim2010.ru/userfiles/conveyor-systems-design-manual.xml>

Item Using the founders combined 50 years experience within the market our products are distributed through electrical wholesalers in the UK and Ireland. The company has continued to grow with a Calibration division was added in 2009, again aimed at offering the end user an excellent service at the right price. The company quickly attained ISO9001 accreditation. When detecting wood the unit will indicate the edge of the wood, moving it across the wall to indicate the opposite edge. There are three selection modes; metal, stud and AC voltage. Simply select one and follow the instructions. It is simple and easy to use, making it a popular choice with electricians. Once an order is placed, DPD will contact you to book a one hour time slot. Any products that fall into this category will be highlighted in your basket before you proceed with an order. My OH used one of these just now when he was about to drill into a wall, and it started making a clickclick noise, just a little regular ticking sound. Unfortunately weve lost the instruction leaflet and neither of us can remember what the clickclick means. Embarrassing I know. We tested it out by holding it over the light switch and it made a piercing shriek, and the same thing happened when it was held over a metal fitting, so Im fairly sure it makes quite a big noise when it finds anything drastic. Anyone able to advise. Huge thanks in advance if anyone can help. The frequency of beeps will increase until it is continuous as the voltage source gets closer. Adjusting the sensitivity control will determine how close the mains cable is. Test it on a cable supplying a table lamp. Ill find the model number and give

it a go! Absolutely brilliant value for money Absolutely brilliant value for money However, Ive lost the bloody instructions. I dont suppose you would have a copy that you could scan and email to me do you. Sorry for being cheeky, but I could really do with them so that I can get drilling.

I havent even calibrated it yet. Switch on, select the right material you want from the three, and hold flat on the wall. Adjust the dial if the sensitivity changes through different depths of plaster. The problem is that it will pick up impurities in your walls and misreport whats there. If your going to use one id get a good quality one which will probably be expensive. The draper one I have is basic and you could do it without one. This went missing after I had repotted some house plants. I just ran the detector round each flowerpot until it bleeped. The funny clicking noise I described in my OP seems to happen over random bits of the wallplaces where Im fairly sure theres no voltagey stuff going onso it may well be the same problem as youve just described. The funny clicking noise I described in my OP seems to happen over random bits of the wallplaces where Im fairly sure theres no voltagey stuff going onso it may well be the same problem as youve just described. All Rights Reserved. The multi detector has a working depth up to 120 mm. The multi detector has a three colour luminous ring for even more accurate detection and is easy to use. When you have detected an object with the wall scanner, the most Middle bars on the screen and a steady beep will sound notice you object is in the wall. You can use the pencil which is included in the package to point the location of the object. The audible and visible cues reliably keep users informed when any object, such as metal, studs, AC live wiring gets found. AUTOMATIC CALIBRATION Stud finder can be calibrated anywhere on the wall.

It automatically recalibrates, when needed, to successfully find the center of studs in one step. Place unit flat on the wall. Do not move the unit until calibration is complete about 3 seconds. All indicators on the LCD are displayed while the unit goes through its about 3 seconds calibration cycle. Following the completion of calibration the unit will beep, and the selected mode icon will be shown on LCD. STUD CENTER FINDER The MultiFunction Wall Scanner can quickly locate edges and center of metal studs, pipes, rebars, joists behind walls, floors and ceilings, also indicates the presence of live AC wire. Step 1 Load 6F 22 9V battery NOT INCLUDED. turn it on. Step 2 Choose the scanning mode. Step 3 Press before each scan. The bars indicated on the screen will go from full to none. It beeps once to indicate that it has been successfully calibrated. Do not let go of the button during calibrating. Step 4 Move slowly on the desired surface. It beeps continually if the object has been detected. Electrical lines may be shielded by metal cladding.
