No, you will enjoy unlimited free shipping when you have the total amount for the added fulfilled by Souq items to your cart is above or equal 350 EGP. Can I benefit from FREE Shipping internationally. Unfortunately, FREE Shipping is only available for Egypt residents. Write a full review Write a full review Enter the code below and hit Verify. The Result The tool is back in business. Flame Guard, Flame Guard Nut and the Ceramic Insulator. Use the T7 screwdriver to remove the 4 screws on the side of the Dremel VersaTip. Carefully remove the side

cover avoiding that some of the pieces fall from their place. Separate the nozzle from the back cover but don't remove the hose. Pay attention to the next step because there is a tiny piece of metal with a rod attached to the center of the trigger. Remove the trigger by simply lifting it. Be careful, the big spring attached to the igniter will jump out of its place. Remove the little piece of metal with the rod in the middle. Don't separate them. Remove the damaged igniter and save the big spring.

Recover the igniter from the lighter. Add Tip Ask Question Comment Download Step 5 Reassembly Start with placing the igniter back into place, making sure that the naked part of the cable fits in the proper place. Use the tweezers to place the end of the cable where it belongs. Slide the metal rod into the trigger. Place back the big spring. Adjust the trigger back into place. Make sure everything fits back where it belongs. Place the side cover back in. Place the screws but don't tighten too much. Screw the Tip, the Flame Guard, the Flame Guard Nut and the Catalyst back. Test it. Add Tip Ask Question Comment Download Step 6 Done. Hope you liked this Instructable and please leave your feedback. Thank You. Add Tip Ask Question Comment Download Share it with us! I Made It! Recommendations Fermentation Quilt You provided a complete instruction on the baby and I appreciate you for taking the time and effort to inform us less knowledgeable people so we don't destroy a most valuable, versatile tool. Thank you so very much! 0 GavinS53 Question I have a brand new unit and it won't light. The spark is working is down inside, not up near the gas hold on the shaft. I tried taking it apart and adjusting but nothing I do will make it start lighting. Gas is flowing, but the spark will not strike high enough. If anyone has any ideas please advise. It seems the flexible one does not have a defined seat point and I'm guessing the spark is jumping where it should not. I moved it up a bit, it's not reliable, but I can get it lit now. 0 raulmaes GavinS53 It works for me. Requirements 1. small syringe 2. alcohol Take out the nozzle that attached to hose, get the alcohol into syringe and attach the small end nozzle to the syringe it fits really well and start pushing easy. hope it works for others 0 PhilipL64 I took it apart and discovered the tube wasn't even attached. Thanks for the pics. They were helpful for showing where things should go.

Tbh I didn't follow your instructions and I removed the flow rate adjuster screw. I don't recommend this because there is no real need. Anyway if you end up doing this make sure you screw it all the way back in and make sure the circular silver piece of metal doesn't move while the screw is loose or it will put the calibration out. If you have already put the calibration out you can restore this in 1 of 2 ways. You should see a single dent in the side of the circle. This is where the flow adjusting screw was seated from the factory. So all you need to do is put the circular silver piece of metal on and line up the flow rate adjusting screw hole with the dent in the middle. The other option is to leave it all assembled and loosen, adjust, tighten the flow rating adjusting screw until you get the flow range you want. The problem with the second option is you will create multiple dents in the inner brass circle which will remove your option of returning it to the factory setting at a later date. But there is a second problem. After filling it up with fresh Butane again, the flame looks weird. It doesn't look like strong, stable jet flame, but rather like a wobbly lighter flame from normal lighters. The flame sometimes isn't even blue anymore. Does anyone have a similar problem? Hope this can help you 0 ZideYT raulmaes So far, the flame is still yellow, kinda looks like a small flamethrower rather than a jet flame. Maybe better butane will work, but I will comment when I finally found a solution. By the way, I tried your Instructable to replace the igniter, at least it ignites the flame every time I press now! 0 nanodeath ZideYT I have exactly the same problem. Everything was cleaned in ultrasonic cleaner, then with acid and alcohol and checked. Gas was removed and tank fulfilled with best what was on market. No change! Flame looks like burning just on a tip and doesn't look like jet flame.

0 raulmaes nanodeath I was using the butane from the zippos brand and it works perfect, but I just moved to another country and found another brand that doesn't say it contains butane but just universal gas lighter refill, I hope it doesn't clog the catalyst 0 ZideYT raulmaes So far, the flame is still yellow, kinda looks like a small flamethrower rather than a jet flame. Maybe better butane will

work, but I will comment when I finally found a solution. By the way, I tried your Instructable to replace the igniter, at least it ignites the flame every time I press now! 0 martinhiironaga After opening up the side cover, I tried clicking the trigger and noticed that a spark was being generated but it wasn't coming out at the end of the metal rod but further down closer to where the rod passes through the trigger. After putting it all back together and refilling the tank with butane, I held my breathe, pulled back on the trigger and it lit up instantly. Saved me much time and a little money by not having to buy a lighter. If I hadn't followed your instructions to open up the side cover, I would have never discovered the simple problem with my Versatip. 0 hamsammy My ignitor works about 5% of the time and I've only had it 5 months. I click and click and click and finally it will come alive! Sounds like an extra work for my Dremel 400 XPR, jeje thank you petercd for the tip And thank you MsSweetSatisfaction for the comment 0 petercd I got annoyed by the blue child safety piece and cut it off, my youngest is 23yr, so not really something I'm worried about.
