### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with canopus acedvio manual . To get started finding canopus acedvio manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# canopus acedvio manual

Voice Software Transcoding Capture Conversion Encoding Editors ACEDVio is the world's only analog and DV editing card that is completely compatible with hundreds of Analog Video Editing Canopus ACEDVio features analog and DV Digital8, DV and DVCAM supporting NTSC and PAL video Computer Canopus ACEDVio is designed to work with Easy one card installation Application Canopus ACEDVio is ready to edit on any computer with any OHCI Such applications include Final Cut. Maker. Locked audio ensures perfect audio and video synchronization at all Product Life and Highest Return on. Investment When it comes to analog and DV editing, OHCI provides the broadest OS computers. XP Professional requires Service Pack 1 or higher OHCI capture eg. iMovie, Final Cut Pro CDROM Windows support only Separately. Easy one card installation requires no additional software drivers. One card for any editing application Canopus ACEDVio is ready to edit on any computer and with any OHCI compatible edit application. Here is a short list of some compatible editing applications Final Cut Pro, Xpress DV, Premiere, Vegas, Edition, MediaStudio Pro, Windows Movie Maker. Locked audio ensures perfect audio and video synchronization at all times. One card with the broadest compatibility, longest product life and highest. OHCI provides the broadest editing software support ensuring a long product life and high return. Combined with ACEDVio, DVD MovieFactory features the ability to capture directly from a vcr or camcorder into a VCD or DVD project, as well as providing menu, still slideshow and chapter point creation. DVD MovieFactory supports a wide selection of CD and Audition 1.5 und Encore DVD. I got the Canopus ACEDVio with Vegas 4.0. Somehow, i cannot capture a VHS tape. The VCR is connected true a SCART to SVideo cable, wich are plugged in into the capture card. I think somehow Vegas is only connecting to the DV In port, not the analog in port. <http://pierreseche.fr/userfiles/3ware-7006-2-manual.xml>

When I want to capture i only see a black screen and on the capture card a orange led is burning, wich is normally green. I recieve no error from vegas, but no video or audio. Im running WinXP pro with SP1, updated the capture cards drivers and vegad 4.0d update. Hope someone can help. HarrieId say youre right, youve probably had an error message already from VVs capture program saying it can find a capture device and switched off machine control. I think you need to now select the capture device, assuming the ACEDVios drivers are laoded. Come to think of it the Canopus box should have some good words on this very subject, particulalry as they are shipping it with VV! Tried to change the source in vegas, only one exists. I have a Sima Video Copy Master inbetween the VCR and the front bay analog inputs. Vegas sees the VCR just fine including the menue on the VCR. Does the ACEDVio card come with a preview screen on the driver software. If so you should be able to see the player there before you capture in Vegas. If you still cannot see it there its probably not Vegas with the problem. Also have you tried removing the scart you have in between and connect your source deck the ACEDVio card straight away and see if that works. Lastly post you question in the Canopus Forum for the ACEDVio Family and see if they can help you there too. Every now and then Ill put in a tape from family member and try to capture with Vegas and cannot get anything, then it hits me turn on the Copy master power, so the video can get to the ADVc card, then it works just fine. Also there are Jumpers on the ADVc1394 card that can set the priotity of the analog to the firewire but I believe it should by default, have the analog ports to take first priority and the ACEDVio should be similar. I had to reset the Jumers in the J series the get my firewire to work on

the front bay, but everything should be set to the rear ports by default. Check your manual for the ACEDvio card for that though. <http://www.kerouanigaid.org/data/3w-75i-manual.xml>

Have send a email to Canopus about this problem. If they cannot help me to fix it I will return the card. Maybe one of you has a suggestion for another Capture Card You may be blocked if you misuse this feature. We delete comments that violate our policy, which we encourage you to read.

Discussion threads can be closed at any time at our discretion. All was clear in device manager and all the hardware we plugged in to it installed in the usual way, but no capture was available in Edius or any other software. Apparently the ACEDVio capture card isn't compatible with the native firewire drivers in Windows 7 64bit. The fix is as simple as reverting to the legacy firewire drivers that are available in the update driver wizard. Though the ACEDVio may be thought of as a bit outdated, there's still plenty of work for it to do in the world of Cracking Media. The reliability of all our Grass Valley Canopus equipment means we're not looking to swap just yet. Okay, thank you.

Industry leaders worldwide recognize Canopus' advanced HD, HDV, DV and MPEG codec technologies, which are featured in the company's acclaimed video editing solutions, transcoding products, and networkbased video distribution systems. Canopus has worldwide locations in Tokyo, the U.S., U.K., Germany, and China in addition to an extensive worldwide distribution network. Its primary markets are broadcast, professional video, corporate and enterprise, and government and education. As of January 24th, 2006, Thomson ownership of Canopus was 94.31% upon settlement. The acquisition of Canopus strengthens the position of Thomson's Grass Valley Broadcast and Networking business, which is a key element in Thomson's two year plan and is one of four primary revenue growth boosters. Whether its a Windows or Macintosh operating systembased computer, VHS or DV camera, EDIUS, Final Cut Pro, Avid Xpress, Adobe Premiere Pro or Sony Vegas nonlinear editing software, our ACEDVio is the one card for all editing environments, providing the broadest compatibility, longest product life, and highest return on investment. At the heart of the ACEDVio card is the innovative Canopus DV codec chip, which provides the industrys best picturequality preservation and locked audio support during analogtoDV conversion and capture. This locked audio ensures perfect audio and video synchronization at all times. My Windows 10 upgrade went very well except I have not been able to get the legacy drivers to install. A small window pops up then disappears.I tried to take a screenshot but failed.

I cant find the location and it is not coming up on search. You can follow the question or vote as helpful, but you cannot reply to this thread.Download and run the msi file. Can you double check itDownload and run the msi file. Can you double check itNow it works. Its a brand new drive with that Needs lgacy 1394 driver. Where do I download KB29701191 It worked fine under Windows 7. I cant find KB29701191 either. I had already downloaded and installed a 1394 OHCI legacy driverI was able to load the legacy drivers following the above instructions. So you guys are super helpful. The legacy drivers worked with it under windows 7 but the Focusrite Saffire is not completing the driver install even with the legacy 1394 drivers. The audio interface is no longerOnward and upward right Nobody having any luck making it work on Windows 10They seemed amazed I was still using it. It may not display this or other websites correctly. You should upgrade or use an alternative browser. I am registered user on Canopus site and there no any advanced information. I need 7pin mini din description because I have not any cables and connectors.SVHS connection work but not good. Can anyone out there help meAfter that, you can post your question and our members will help you out. Welcome to the Photography Forums where you can ask questions or find answers on anything related to photography, cameras and techniques.Youll be able to ask photography related questions or chat with the community and help others. Download free trial ! Download free trial !Then I tried to follow the instructions under this link in the webpage, but there is no option to select manual settings as per the instructions. Can anyone helpme in making manual settings in moviestar5

for dazzle dvc150 I'd get a real capture card and software and you won't have any problems. Vegas Video 4 and a Canopus ACEDVio card. HTH Tomk see [www.beckerpm.dyndns.org](http://www.beckerpm.dyndns.org) for some additional tools. All rights reserved.

Cano Tech Sup isn't helping Canopus Tech support isn't helping, vague response. Canos site says that it's compatible with Mac OSX and FCP. Got the install CD and there's nothing on it for MAC OSX. There's no directions or manual on proper setup I have not been able to digitize anything yet. My Sequence Presets, Uncompressed 8 bit. PCIX is backwards compatible with relatively new PCI cards. If the card you bought is a 5volt PCI card, it won't work. Looks like it is 5V. This website is using cookies. By continuing to browse, you are agreeing to our use of cookies as explained in our Privacy Policy. I Agree. It must be external and do its own processing so it doesn't use the computer's own CPU. I intend to capture a live stream and have the Ubuntu PC serve it to other computers. I may use VLC or MythTV. I have looked on various related sites but finding a compatible USB one which does its own decoding is hard to find. I use it for backing up old video that is stored on tapes, and it isn't working with my current install of Ubuntu 10.04. When I plug the device in, it should be detected and the em28xx module should be loaded. And this is just the playback from totem player or mplayer, and not the playback from. and generally online streaming this works just fine. Note that the preview picture of the video file on nautilus has the natural colours it should have. So now I have all the pros of following the guide, but this is a major con. If loaded manually the card is still not found. Dmssg does not show the card. I use Debian squeeze on a P4 2.4MHz machine with 2 GB ram.

I would like to capture smaller segments of these and load them online to share with family and friends. I would like to know what is the most recommended software for this task. I am running Ubuntu 9.10. I would have done this by using a firewire cable directly attached from the camcorder to my laptop, but my laptop has only USB ports. So I ended up creating DVDs using an stand alone Video Recordable DVD Drive. I used Kino previously in 8.04 Hardy, but it was buggy at best in 9.10

Karmic; Ive just installed it in 10.04, but capture keeps stopping after 2 or 3 seconds. I also tried kdenlive, but the audio capture has a lot of noise that is louder than the voices on the tape, and once it finishes capturing video, it doesnt display a Save dialogue as it is supposed to so that wasnt very successful either. So what can I use to capture video from a MiniDV Camera via Firewire. This script was working in Ubuntu 9.10 until I reformatted my machine and installed the Ubuntu 10.10, 64 bits. The machine is an AMD Athlon II, 2.6GHz with 3 GBytes of Ram. The trouble is the capturing of the video. With AVI, Ive tried different video formats MPEG4, flash, etc. and none of them will play. The generated avi file seems to grow with data, but the result is just unplayable it just hangs, thinking its playing. Is there a troubleshooting page or something to figure out what the problem Im having with guvcviewer is Im also unaware of a simple GUI application to use in order to capture the video. It would need start and stop features. HDPVR1250 model 1196 but it all didnt work i have the ubuntu restricted extras installed but mythtv is not picking up the card. I installed Ubuntu 10.10 and the newest version of the Mythbox backend. My capture card that I am having issues with is a Hauppauge WintvHVR1850 card, I followed the instructions on installation from linuxtv.org and did not get any errors. I tried to set up Mythtv and it didnt get a signal and couldnt find any channels.

I would like to know if my card is even working so I tried using xawtv but still could not get a signal from my card. Recently i downloaded GyachE v1.1.48 for yahoo video chat. I really want to convert the webcam output to VP8 or H264, but apparently ffmpeg cant even capture the webcam with a video4linux device. Code The problem I have a bunch of old VHS tapes remember those. and need to get them digitized. I have a VCR, and a Dazzle Hollywood DV Bridge which captures video to DV over Firewire IEEE1394. I first tried using Final Cut Pro, but it wouldnt capture, perhaps because it expects a controllable DV camera, and the Dazzle isnt a DVC device. I then tried my other favorite video editing app, Kdenlive, but it seemed to have the same problem. I took a quick stab at the other common editors in the repositories Kino, Openshot, etc., but no luck with any of them. Then I remembered the dvgrab command, and gave that a shot and it worked, giving me a nice dv file. However, DV makes pretty big files, which I wanted to compress down to something more manageable. Since I was going to be digitizing hours and hours of tapes, it would be great if I could compress while capturing. A little more googling and I had the answer you can pipe dvgrab directly into ffmpeg. This worked great, capturing a 2hour tape into a highquality quicktime around 2GB. But I also wanted to be able to view the capture while it was going. Since I left the field monitors and audio splitters at the office, I had to figure out how to do this in software. The only thing that didnt work was audio playback, which was choppy and introduced errors in the capture file. I think a little tweaking with the capture rates could fix that. Video is no longer streamed to this file. What has happened and how can I grab streamed video OK, its back to the first error, is there anyway to run Kino and capture video without changing to root This is a pain.

Yes, there are screen motion capture utilities in the Ubuntu Software Center, but theyre just screen scrapers that result in low quality copies without any audio. I want something that will actually capture the video stream and save it as a file. Id believe it if someone says faulty hardware because the easycap is cheap, but I dont think thats the case. I have bought an USB DVBT Receiver, named WandTV. According to LinuxTV; WandTV, aka Shenzhen Forward Video EzTV859, is supported in the Linux kernel. When I try to setup the mythTV backend Im being asked of what card type I have. Used to be packaged by packman for Opensuse but doesnt seem to be available for 11.2. Is there an alternative I can use for video capture or has packman just not gotten around to adding this yet Im only interested in SD resolution for the time being. Whether its a Windows or Mac OS computer, VHS or DV camera, Final Cut Pro, Avid Xpress, Adobe Premiere Pro, Vegas or Grass Valley EDIUS Pro NLE software, Canopus ACEDVio is the one card for all editing environments, providing the broadest compatibility, longest product life and highest return on investment. One Card for Any Computer Canopus ACEDVio is designed to work with both Windows and Mac OS computers. One Card for Any Editing Application Canopus ACEDVio is ready to edit on any computer with any OHCI

compatible editing application. Such applications include Final Cut Pro, Avid Xpress, Adobe Premiere Pro, Vegas, Avid Liquid, Ulead MediaStudio Pro and Windows. Movie Maker. One card with the worlds best analog and DV technology At the heart of ACEDVio is the innovative Canopus DV codec chip providing the industrys best picture quality preservation and locked audio support during analogtoDV conversion and capture. Locked audio ensures perfect audio and video synchronization at all times.

One Card with the Broadest Compatibility, Longest Product Life and Highest Return on Investment When it comes to analog and DV editing, only Canopus ACEDVio provides multiplatform compatibility with an open standard OHCI FireWire interface. OHCI provides the broadest editing software support, ensuring a long product life and high return on investment. Connects to all widely used analog and DV cameras and decks. Compatible with Windows and Mac OS computers. Provides video output to a monitor or television while editing. Ensures a longer product life and a high return on investment with the broadest editing software support and video equipment compatibility. Pentium III 800MHz or AMD Athlon 800MHz CPU or faster 256MB RAM; CDROM drive Windows 2000 requires Service Pack 3 or higher, Windows.EDIUS DVX delivers the most powerful realtime editing capabilities in its class including DV capture via FireWire and renderfree DV and analog output. Unbeatable Acceleration for Realtime DV Video Production EDIUS DVX features hardwarebased DV editing acceleration, providing the industrys best picture quality with unparalleled realtime editing performance. The advanced hardware codec at the heart of EDIUS DVX generates the realtime DV output stream without placing any load on the CPU. This power is made possible by the scalable video technology built into EDIUS Pro. Pioneered by Canopus in 1998, scalable video technology ensures that the realtime editing capabilities of EDIUS DVX increase with CPU power. Scalability ensures a long product life and a high return on investment. Highquality analog output provides live, uncompressed YUV 422 video when editing in all supported applications. The proprietary design of the IEEE 1394 DV interface found on EDIUS DVX offers responsive, frame accurate control of DV devices and, of course, realtime DV output from the EDIUS Pro timeline. Pentium 4 processor 3.0 GHz or faster 512MB RAM 800 MB free disk space Windows.
