Many of the sections are not specific enough to the car that he has to help shed light on the repair

being performed. I haven't tried other manuals on this specific car, but I remember 20 years ago when I was a mechanic that Chilton's was THE manual to have. That's really changed. A few times I have pinpointed a problem with my Camaro, and according to the book, it's a walk in the park. Once you get down to it, reality sets in, and you realise the incompleteness of the info. I personally would prefer a lot more photos, and more realistic descriptions. This is a must have for any Third Gen Camaro Owner. Sorry, we failed to record your vote. Please try again. Owners of the Chevrolet Camaro are a unique type of car owner who appreciates power and tradition. They also are the kinds of people who might want to do their own repairs and become very familiar with their cars. A repair manual will not only help to do the most basic things such as change oil or other fluids, but can also assist in the most demanding repairs all the way up to removing and exchanging the engine block. Buying a Chevrolet was a smart choice, and maintaining it in great shape is even smarter. This part is also sometimes called Chevrolet Camaro Service Manual. We stock these Repair Manual brands for the Chevrolet Camaro Chilton and Haynes. They are quick and prompt. Customer service was even able to answer my questions I had about the book. I would recommend everyone to order from parts geek. The only thing I wasn't happy with is with Chilton company themselves. The book didn't have two things I specifically bought the book for.

Unfortunately, the old saying, "if it's not broke don't fix it", doesn't apply to a modern automobile. The fact of the matter is, we can take control of future auto repair expenses by spending money in the right place on preventive car maintenance services. Sidebar National car care month is held twice a year. The spring event takes place during the month of April and the fall car care month during the month of October. A survey reviewing more than 2,000 participating car care aware vehicles, found that 90 percent of them fit in the category of behind on car maintenance services. The spring event prepares your automobile for the unique summer driving experience. Summer road trips and hot weather provide a unique set of challenges for your automobile. The fall event held in October prepares your car for a long harsh winter.

In this brief article we'll talk about taking control of your car maintenance services in an effort to prevent any surprises down the road. I perform these recommended services without hesitation, because the car maker put them in place for their own protection. New and certified preowned vehicles come with warranty coverage that stretch as far as 10 years 100,000 miles in some cases. In an effort to reduce warranty claims the designers and engineers come up with a maintenance plan to protect the company and the automobile. Unfortunately, very few car owners take the time to read through the maintenance section of their owner's manual. However, you must cross check any recommended preventative car maintenance services with the car maker's recommendations before approving them. Unfortunately, this desire for your automobile to maintain top condition is financially motivated. Don't get me wrong, the retail auto repair center has a right to make a profit. They also have the right to recommend services that they feel would benefit the consumer. However, these consumers need to be proactive and confirm that the services are for the benefit of both parties. As an example, a shop that just bought a brandnew alignment rack might recommend alignment services on every car repair estimate as an add on. The problem with preventative car maintenance is your performing a service to a vehicle on a regularly scheduled basis. You carry out the operation regardless of how the vehicle runs or looks at the time. With that said, it doesn't mean that you need to perform a service that's not recommended by the manufacturer at that scheduled mileage. In a nutshell, over maintaining an automobile is a waste of financial resources. Nevertheless, not doing any preventative maintenance services can be worse than throwing money away. Take control of your car maintenance and strike a balance between these two extremes.

Often these limited maintenance programs last for a three year or 36,000 mile period. During this time, drivers tend to stick to the factory recommendations religiously, because they are free. Although this just boils down to a few oil changes, a tire rotation and maybe an air filter the car gets a good start in life. Now that they have to pay for the scheduled services they might tend to put them off. Let's use the most basic of all services, the engine oil change, as an example. As a mechanic I've seen firsthand what a lack of oil changes can do to the internal workings of an engine. For this reason don't hesitate to perform preventative car maintenance services at their scheduled intervals. Better yet, go back to my previous recommendation and read through your owner's manual and lay out a schedule of expenses at specific mileage points. Go nuts and make a spreadsheet. On many automobiles additional maintenance becomes necessary at the 30,000 mile and 60,000 mile markers. Find out how much these services cost and prepare to spend the money when you reach these mileage intervals. Put money aside in advance for these critical services. You don't have to put money in a cookie jar, but you do need to have a plan so you don't fall behind on

preventative car maintenance services. This blanket statement doesn't cover the whole truth about the subject. In fact, some regularly scheduled maintenance items are easier to replace on a 2004 Chevy Malibu than a 1972 Chevrolet Malibu. Last month the MotorEra.com website touched on this subject in an article covering the top five best car repair tips. Let's take the 50,000 foot view from the tips article and bring it down to earth to focus on the easiest DIY auto repair. In fact, you'll want to handle this particular service yourself from this day forward. Before we dig in, let me focus your attention to an article we put together explaining how to properly prepare for a DIY car repair.

It contains insightful tips on how to get ready for success. Furthermore, you can get top quality parts to improve the safety of your automobile and perform the service in about 10 minutes. Yes, I'm talking about the replacement of the wiper blades. I know that it sounds like such an easy task that it shouldn't even require an article. The biggest mistake people make is not doing it themselves. They let the auto repair shop do it instead. Don't make this huge mistake. As a professional mechanic I can tell you that the shops I have worked for charge top dollar to replace the wiper blades for customers that are more than capable of doing it themselves. It goes beyond the cost of the service and the time restrictions of the busy motorist. Then they purchase these parts in bulk to save even more money. In addition, they marked these parts up 30 percent to maximize the profit. This means customers pay more than they should for parts that probably won't even last a year. When those cheap, made in China, plastic wiper blades disintegrate in the middle of a rainstorm it can turn into an unsafe situation. High quality, metal framed, powder coated top quality rubber wiper blades exist and you need to get a pair. Personally, I get my wiper blades from Michelin. That's right, this tire company has a complete range of windshield wiper parts. Nobody makes better rubber than they do, in my opinion. Fortunately, they sell wiper blades directly to the consumer through big box stores like WalMart and Target. Something else that the average consumer doesn't realize becomes the design of the wiper blade. When you buy replacements from these top of the line companies you get a built in design that takes aerodynamics and consideration. That's right; they use the wind at highway speeds to push the blade against the windshield. This provides superior clearing of the windshield that actually improves the faster you go.

First of all, wiper blades are easier to install now than they were on automobiles from the 70s and 80s. Secondly, all you have to do is type the year, make and model of the vehicle into the YouTube search box with the words wiper blade. You'll be amazed at the sheer number of high quality videos showing you exactly how to perform the service yourself. How long this rubber part survives depends a lot on environmental conditions. Another big factor becomes how the wiper blades are used and abused. The part of the rubber insert that touches the windshield is thin and delicate. If you use your blades to clean bird droppings off the windshield or ice and snow, they won't even last a year. Why? You'll get hairline cracks and fractures on the most important part of the rubber insert. And wiper blades that don't properly clean the windshield become the number one complaint from drivers about this system. Another thing that remains high on the list of driver complaints when it comes to wiper blades becomes chattering. This horrible noise happens as the arms sweep back and forth. To understand how a worn or old blade can cause this condition let's talk about how they operate when they're new. As the rubber ages, it loses this flexibility. Now the arms are dragging them across the windshield and this can cause the annoying wiper blade chatter. Diagnosing your windshield wiper problem should start with replacing the blades. Especially, if they're more than a year old. With that said, the possibility exists that a more complex issue exists. In fact, you might want to learn more about the wiper motor and transmission assembly. Take a look at this comprehensive article about solving windshield wiper problems for more detailed information. Whether you just found out you set a code for a knock sensor or discovered an oil leak from the oil pan on your Chevrolet S10 Blazer make sure you prepare before you start the repair.

Preparation of the work area, having the proper tools and equipment plus knowing how long the job will take is just a few of the items we'll uncover. Let's use the oil pan leak on a Chevrolet Blazer as an example. Just because the engine oil pan is soaked with fluid doesn't mean the pan gasket itself is leaking. If you bought yourself an oil pan gasket set and started the repairs you won't have what you need to fix the vehicle on hand. This is why properly planning for a car repair project becomes so important. Because of the weight of the transmission and complexity of the procedure mechanics consider this a twoperson job in the driveway. With that said, a rear main seal, timing cover and oil pan gasket replacement goes much quicker with the vehicle raised on a hoist. However, I'm also going to take this a step further and talk about researching solutions on the Internet before you begin the car repair project. Chevrolet Silverado pickup trucks with V8 engines often set knock sensor check engine light codes. So naturally you break out the factory auto repair manual to find a component location diagram. Now you see that these parts are mounted underneath the intake manifold. After reviewing the stepbystep guide for the removal and installation of the intake manifold a clear vision comes into focus of the complexity of the procedure. Not only can you learn from people who've already done the repair you might discover some shortcuts. Watch several clips of people dealing with these repairs. In this particular situation, when replacing a Chevrolet knock sensor, I see some people opt for relocating the sensor to the topside of the intake manifold. Now with the input from the service manual combined with the real world experience of others, you're ready to plan your car repair project. Using the examples throughout this article, what we thought might take a few hours actually takes a full day or more.

In addition to allotting the proper amount of time we also want to make sure the right tools for the job stand at the ready. Raising the motor provides clearance between the oil pan and the cross member. The tools required include a floor jack and several blocks of wood. Having these items on hand allows us to continue working without stopping to source this additional equipment. And the engine oil and filter isn't the only supplies needed. We'll need rags, razor blades and scrapers to clean the gasket surfaces. If we're pulling off the engine intake we also need two gallons of premixed antifreeze. You're more likely to find success if you can complete the assignment from start to finish. When you fail to properly plan for all of the possible contingencies you lengthen the repair time and reduce the chances of victory. Now go get yourself a vehicle specific PDF auto repair manual. Once you have done your car research and found the perfect one for you, it's time to choose when you will step into a dealership. This is the end of the year, and dealerships have sales quotas to meet and exceed. If they exceed their goals by a certain amount, the dealership might get a nice bonus check, and therefore they want to get you into a new car. This puts you right at the end of meeting sales quotas. Salespeople, sales managers, and dealership owners are all working together to end the year with a bang with it comes to their numbers. The best day to get the lowest car price is the last day of the year. Yes, December 31st can mean saving a couple of thousand of dollars. Going into a dealership right at the end of the quarter is another great savings day. The average person goes car shopping during the weekend because it is normally the days they have off. Very few people go into a dealership on a Monday because it is the start of their workweek. If you can't go in on a Monday, then Thursday is another good option. If not then Wednesday is third in line, then Friday, then Tuesday.

Many people think that weekends are the best because they see so many people at the dealership, but the truth is your power to negotiate lessens because they have people there ready to buy. The last thing you want is to invest your hardearned money into a vehicle that is not reliable and breaks down on you. Nothing worse than knowing you owe way more than your car is worth because no one wants a piece of junk. You want to make sure you set yourself up with a realistic budget when it comes to your car payment. You do not want to put yourself in a situation where you can't repay your car loan. You have to take into account budgeting money for full liability insurance if you are financing, plus annual registration renewals, oil changes, new brake pads, and don't forget gas. If

you live in a state that requires vehicle inspections, then you will have to add that into the budget as well. They say knowledge is power, and in this case, knowledge will save you money. Make sure you show up with your negotiating hat on and make your car salesman a reasonable offer that they can't resist. Who doesn't want one. Read our complete guide on the slickest American sports cars. The muscle car gives a driver power and speed but they also look slick! Sales of muscle cars in America have increased nearly 35% since 2005. Not all muscle cars are equal. Throughout history, a few muscle car manufacturers have withstood the test of time. While a few entries took a break from production, they always came back strong. These entries were chosen based on their prominence, history, and popularity. Many early variations of the Corvette were mainly convertibles. The Corvette is a sports car known for its slick design and powerful engine. The 2016 model includes a 6.2liter V8 engine. The Chevy Corvette Z06 for 2016 has a sevenspeed manual gearbox option. One beloved feature of newer Mustang models are the rounded headlights. One notable difference is the 5.0liter engine, with most competitors a 6.

0liter is common. The 2017 Ford Mustang GT features 435 horsepower. Early generations saw this vehicle as a sleek and rounded sports car. This generation is when the longer front end design of the Camaro became the norm. Chevrolet decided a new generation would begin for this American sports car in 2010. The Camaro is now in its fifth generation of production. During its earlier generations, the Challenger would struggle to build a legacy against already established vehicles. In 2008, the modern Dodge Challenger would debut its 4th generation design. This newer Challenger is notable for its classic muscle car appeal.
