Anyone have a link or able to post up a good idea Thanks! Unscrew the drain it will empty out.The very lower drain plug is in a hard to get to spot. Like the Tranny rear cross member is right in the darn way. Youll see a little sensor screwed into the tranny very close to that area. Near the bottom. It is the Tranny Temp sensor. You can simply disconnect the electrical connector and unscrew the sensor and use this as a drain. I had the front of my car up on jack stands and this helped angle the car so the fluid would come out good. After the fluid seemed to stop I jacked up the rear and saw a little more drizzle out. After that put the sensor back in, plug it in and use the top Fill plug to replace fluid of your choice. I went with Mobil 1 Synth and it made shifting noticeably smoother. If I had it to do all over again Id probably go with Redline. I heard that one is very good as well.It sounds straight forward. I was concerned the trans cooler on the SS might present something unusual. I will be sure to measure what drains out and put at least that much back in. I didnt know if it was possible to drain the cooler a little radiator I guess and then need a special sequence in order to refill it completely or release any trapped air. Thanks again. And BTW Ill be using Royal Purple Synchromax because of past positive results Ive had with that brand.The very lower drain plug is in a hard to get to spot. I heard that one is very good as well. I ended up removing the transmission brace as I was worried about making a big mess. Somewhatdamaged I ended up removing the transmission brace as I was worried about making a big mess. Somewhatdamaged Also, Ive already bought the RP, so Im stuck with it but will report back here about results. If Im disappointed, Ill change it again, LOL. After putting up with the clunker trans in my last 5th gen V6, Im not gonna quit til this ones as good as it can get either. I want that butter feeling back. Thanks again!http://www.fundacionecla.org/resources/original/digitech-tsr-24-manual.xml

Also, Ive already bought the RP, so Im stuck with it but will report back here about results. Thanks again! I did use a trans jack to hold it up. Be careful as there is this kind of sharp plate of thin metal underneath those braces and you can cut your fingers on it. Also, the tranny fluid shoots out of that drain hole, so have your drain pan ready to go. I used pretty close to the whole four quarts on the refill, using a Harbor Frieght transfer pump. I did use a trans jack to hold it up. I used pretty close to the whole four quarts on the refill, using a Harbor Frieght transfer pump. Also, Ive already bought the RP, so Im stuck with it but will report back here about results. Thanks again! If you want to improve shift feel, bleed the brakes more frequently. Thecar is a 2010 Camaro SS with an M6.I need to do my tranny, ect.If you do want to change it anyway the trans takes 4 qts of ATF and the rear end takes 1 qt of gear oil. Check your owners manual I think all this info is in there. Use GM fluid to maintain warranty!So it takes 4 qts of ATF And get if from gm Do u know if its something i can do myself. Anything i should know before doing it. Do u know where is the drain plug at. Fill plug Thanks!!I used full synthetic wolfshead atf. Would have used royal purple but I already had 4 quarts of wolfshead in the basement. If I remember correctly the drain is on the passenger side of the trans towards the back and the fill is on the drivers side. Somebody correct me if Im wrong. BTW when I changed to the synthetic.it shifts so much smoother now.And make sure the rear end fluid is synthetic with the sycronizer addative in it!I did and used Mobil 1 Synthetic ATF. I did not notice any significant improvement in shifting.Jus askin. If I remember right the book says 90 wt oil for manny tranny and re. On a side bar, I had a 03 F150 2WD and during the wunter couldnt get out of the driveway.http://pumbacamp.co.za/userfiles/digitech-tsr-24-manual.xml

I dug it out as much as I could and salted the rear tires and at some point was just spinning the tires. I could smell the cooking 90wt rediff oil. Man nothing like it. And the smoke! I had no problems getting stuck like that after that one time and drove like normal. So when I took it in for the next oil change they replaced the rediff oil and topped it off. I learned after that to remove my food off the gas pedal when the wheels start spinning. Anywhay, Troy Lawson Heavy weight gear oil wont get into needle bearings. I cant prove it but thats I heard. The WIKI page on the 6060 says ATF. Failure to use the proper fluid may result in transmission internal damage. From service manual. Caution THE ENGINE MUST BE RUNNING when the trans oil level check plug is removed or excessive fluid loss will occur, resulting in an underfilled condition. An underfilled transmission will cause

premature component wear or damage. Note Continue to monitor the TFT. If the TFT is not within the specified values, reinstall the trans oil level check plug and repeat the previous steps. Remove the trans oil level check plug 1 from the transmission fluid pan. Allow any fluid 2 to drain. If the fluid is flowing as a steady stream, wait until the fluid begins to drip. If no fluid comes out, add fluid until fluid drips out. Refer to Transmission Fluid Fill Procedure See Service and Repair. Inspect the fluid color. The fluid should be red or dark brown. If the fluid color is very dark or black and has a burnt odor, inspect the fluid and inside of the bottom pan for excessive metal particles or other debris. If there are no signs of transmission internal damage noted, replace the fluid filter assembly, repair the oil cooler, and flush the cooler lines. Fluid that is cloudy or milky or appears to be contaminated with water indicates engine coolant or water contamination. Caution Refer to Fastener Caution See Service Precautions\Vehicle Damage Warnings\Fastener Caution.

Replace the trans oil level check plug and tighten to 25 Nm 18 lb ft. Inspect for external leaks. Refer to Fluid Leak Diagnosis See Component Tests and General Diagnostics\Fluid Leak Diagnosis. Check out our service department reviews online to see why thousands of Chevy Camaro owners pick us for fast, affordable, and reliable auto repair. 2014 Chevy Camaro Transmission Flush A transmission flush is naturally twice the rate of a fluid change due to the amount of time the service takes and the fact that the flush not only replaces the fluid in the pan but also removes fluid from the cooler lines and other parts of your transmission. A 2014 Chevy Camaro transmission flush also uses about 10 quarts of fluid to completely clean and flush out the system. How do you know if you need a Transmission Fluid Change or Transmission Flush. A transmission flush is only vital if your system contains dirt or debris. If the fluid is immensely dark or contains backup sediments, we would recommend a complete system flush instead of just exchanging the fluid. If youd like one of our skilled Chevy Camaro mechanics to examine your transmission fluid, book your transmission service online or give Hare Chevrolet a call at 3173336958.

2014 Chevy Camaro Transmission Fluid A transmission fluid change is usually half the price of a transmission flush as it requires a lot less fluid and time to perform. 2014 Chevy Camaro transmission fluid changes are extremely exacting to keep your vehicles transmission cheerful and lubricated. If you dont routinely change your fluids at least every 30,000 miles or so, you may find that your 2014 Chevy Camaro transmission will slip. Check your cars owners manual for more information on the distinct mileage intervals in which your transmission needs the fluid changed. At Hare Chevrolet, we offer a variety of transmission fluid specials. You can also schedule transmission service online and save even more.There are multiple components to your transmission filter including the filter itself, which is usually a metal plate with a fiber material that catches pollutants. Your 2014 Chevy Camaro will also contain a gasket, pickup tube, and rubber seal which may all need to be replaced along with the filter. Your 2014 Chevy Camaro transmission filter will need to be replaced every 30,000 or 50,000 miles. Be confident to check your vehicles maintenance guide for more information on mileage and time intervals. You can also give Hare Chevrolet a call for expert advice. If youd like us to handle your transmission service, we mostly promote transmission service coupons ranging from filter deductions to fluid specials on a monthly basis. Click here for more service specials and parts specials. 2014 Chevy Camaro Automatic vs Manual Transmission Automatic and manual transmission will commonly require distinctive fluids. Automatic transmission fluids are typically thinner and are commonly red or green in color. Manual transmission fluid or gear oil is thicker due to additives and different compounds extensive to lubricate the gearbox and different components.

Manual transmissions have a higher friction environment due to the way gears are interchanged, thus the lubricant is distinctive. Not only are the fluids a few between manual and automatic transmissions but the level of heat the fluids experience is exceedingly a few. Automatic transmissions generate a lot more heat and thus the fluid in your transmission must be changed more continually. If you dont change your 2014 Chevy Camaro transmission fluid, your transmission will have broken metal shavings and backup corrosive material spread throughout the essential components of your 2014 Chevy Camaro. You should continually check the fluid levels between your fluid and transmission flush service intervals. In many cases, manual transmissions dont come equipped with a dipstick to check your fluid levels, so it can be extremely essential to do. Call or visit Hare Chevrolet for more information if your transmission doesnt contain a dipstick. 2014 Chevy Camaro Transmission Problems Common warning signs that your transmission is having issues are Transmission fluid leaks are the most accepted sign you need a transmission fluid change or potentially even a complete flush service. Its uncommon, but leaks could also designate theres an issue with your transmission hose. An engaging sign would be if your 2014 Chevy Camaro transmission warning light is on. Strange smells are a sign your transmission fluid is burning inside your components. If you notice an odd noise or grinding sound when you shift gears or if you feel your gears catching when you change them then your transmission applicable needs more lubricant or something more perilous could be at fault. One of the most accepted signs is when your transmission shifts gears but the result of those shifts are delayed.
