Using Blank CDRs and CDRWs Your CDR W drive

can write to two different types of recording media—CDRs and CDRWs including highspeed CDRWs. Use blank CDRs to record music or permanently store data files. After creating a CDR, you cannot write to that CDR again without changing your method of recording see the Sonic documentation for more information. Use blank CDRWs to write to CDs or to erase, rewrite, or update data on CDs. If you make a mistake, you can erase the data on the CDRW and try again. Cables may be purchased at most consumer electronics stores.

You can use a commercially available Svideo cable to connect your computer to the Svideo input on your TV. The audio connector on the front of the computer enables you to connect the computer to your TV or audio device, using a commercially available audio cable. Save the blank for use when no PC Card is installed in the slot; blanks from other computers may not fit your computer. Extended PC Cards An extended PC Card for example, a wireless network adapter is longer than a standard PC Card and extends outside the computer. Removing a PC Card or Blank NOTICE Use the PC Card configuration utility click the icon in the taskbar to select a card and stop it from functioning before you remove it from the computer. If you do not stop the card in the configuration utility, you could lose data. Do not attempt to eject a card by pulling its cable, if one is attached. Blanks protect unused slots from dust and other particles. The computer automatically detects the card. PC Cards are generally marked with a symbol such as a triangle or an arrow to indicate which end to insert into the slot. The cards are keyed to prevent incorrect insertion. If card orientation is not clear, see the documentation that came with the card. CAUTION Before you begin any of the procedures in this section, follow the safety instructions located in the Product Information Guide. To install a PC Card 1 Hold the card with its orientation symbol pointing into the slot and the top side of the card facing up. If you encounter too much resistance, do not force the card. Check the card orientation and try again.. The computer recognizes most PC Cards and automatically loads the appropriate device driver. If the configuration program tells you to load the manufacturers drivers, use the floppy disk or CD that came with the PC Card. To connect a network cable 1 Connect the network cable to the network adapter connector on the back of your computer. NOTE Insert the cable until it clicks into place, and then gently pull it to ensure that it is secure. 2 Connect the other end of the network cable to a network connection device, such as a network wall jack. NOTE Do not use a network cable with a telephone wall jack.

Wireless networks fall into two categories—infrastructure networks and ad hoc networks. An infrastructure network uses routers or access points to connect several computers. An ad hoc network does not use routers or access points and consists of computers that broadcast to one another. For additional assistance with setting up your wireless connection, go to [support.dell.com](http://support.dell.com) and search for the keyword wireless setup. If the software is removed or corrupted, follow the instructions included in the user's guide for your wireless network card. The user's guide is available on the Dell Support website at [support.dell.com](http://support.dell.com). When you turn on your computer, a popup appears from the network icon in the notification area whenever a network is detected in the area for which your computer is not configured. 1 Click either the popup or the network icon to configure your computer for one of the available wireless networks. The Wireless Network Connections window lists the wireless networks available in your area. NOTE Network security settings are unique to your network. Dell cannot provide this information. Your network is configured automatically. NOTE Your computer can take up to 1 minute to connect to the network. After your computer is configured for the wireless network you selected, another popup notifies you that your computer is connected to the network you selected. Thereafter, whenever you log on to your computer in the area of the wireless network, the same popup notifies you of the wireless network connection. A driver is a program that controls a device such as a printer, mouse, or keyboard. All devices require a driver program. A driver acts like a translator between the device and any other programs that use the device. Each device has its own set of specialized commands that only its driver recognizes. Dell ships your computer to you with required drivers already installed—no further installation or configuration is needed. Many drivers, such as the keyboard driver, come with your Microsoft Windows operating system. Identifying Drivers If you experience a problem

with any device, identify whether the driver is the source of your problem and, if necessary, update the driver. Windows XP 1 Click the Start button and click Control Panel. 2 Under Pick a Category, click Performance and Maintenance. 3 Click System. Help Describes the test and may indicate requirements for running the test. Configuration Displays your hardware configuration for the selected device. The Dell Diagnostics obtains configuration information for all devices from system setup, memory, and various internal tests, and it displays the information in the device list in the left pane of the screen. The device list may not display the names of all the components installed on your computer or all devices attached to your computer. Parameters Allows you to customize the test by changing the test settings. Tab Function If you install drivers obtained from other sources, your computer might not work correctly. Using Windows XP Device Driver Rollback If a problem occurs on your computer after you install or update a driver, use Windows XP Device Driver Rollback to replace the driver with the previously installed version. 1 Click the Start button and click Control Panel.

2 Under Pick a Category, click Performance and Maintenance. 3 Click System. 4 In the System Properties window, click the Hardware tab. 5 Click Device Manager. 6 Rightclick the device for which the new driver was installed and click Properties. 7 Click the Drivers tab. 8 Click Roll Back Driver. Manually Reinstalling Drivers 1 After copying the required driver files to your hard drive, click the Start button and rightclick My Computer. 2 Click Properties. 3 Click the Hardware tab and click Device Manager. 4 Doubleclick the type of device for which you are installing the driver for example, Modems or Infrared devices. 5 Doubleclick the name of the device for which you are installing the driver. 6 Click the Driver tab and click Update Driver. 7 Click Install from a list or specific location Advanced and click Next. 8 Click Browse and browse to the location to which you previously extracted the driver files. Resolving Software and Hardware Incompatibilities If a device is either not detected during the operating system setup or is detected but incorrectly configured, you can use the Hardware Troubleshooter to resolve the incompatibility. To resolve incompatibilities using the Hardware Troubleshooter 1 Click the Start button and click Help and Support. 2 Type hardware troubleshooter in the Search field and click the arrow to start the search. 3 Click Hardware Troubleshooter in the Search Results list. 4 In the Hardware Troubleshooter list, click I need to resolve a hardware conflict on my computer, and click Next. Dell PC Restore permanently deletes all data on the hard drive and removes any applications installed after you received the computer.

Using Microsoft Windows XP System Restore The Microsoft Windows XP operating system provides System Restore to allow you to return your computer to an earlier operating state without affecting data files if changes to the hardware, software, or other system settings have left the computer in an undesirable operating state. NOTICE Make regular backups of your data files. System Restore does not monitor your data files or recover them. Creating a Restore Point 1 Click the Start button and click Help and Support. 2 Click System Restore. 3 Follow the instructions on the screen. All calendar dates with available restore points appear in boldface type. 4 Select a restore point and click Next. If a calendar date has only one restore point, then that restore point is automatically selected. If two or more restore points are available, click the restore point that you prefer. 5 Click Next. The Restoration Complete screen appears after System Restore finishes collecting data and then the computer restarts. 6 After the computer restarts, click OK. To change the restore point, you can either repeat the steps using a different restore point, or you can undo the restoration. Using Dell PC Restore by Symantec Use Dell PC Restore by Symantec only as the last method to restore your operating system. PC Restore restores your hard drive to the operating state it was in when you purchased the computer. Any programs or files added since you received your computer—including data files—are permanently deleted from the hard drive. Data files

include documents, spreadsheets, email messages, digital photos, music files, and so on. If possible, back up all data before using PC Restore. NOTICE Using PC Restore permanently deletes all data on the hard drive and removes any applications or drivers installed after you received your computer. NOTE Do not manually shut down the computer. Click Finish and let the computer completely reboot. 6 When prompted, click Yes. The computer restarts. Because the computer is restored to its original operating state, the screens that appear, such as the End User License Agreement, are the same ones that appeared the first time the computer was turned on. 7 Click Next. The System Restore screen appears and the computer restarts. 8 After the computer restarts, click OK. Enabling System Restore If you reinstall Windows XP with less than 200 MB of free hard disk space available, System Restore is automatically disabled. To see if System Restore is enabled 1 Click the Start button and click Control Panel. 2 Click Performance and Maintenance. 3 Click System. 4 Click the System Restore tab. 5 Ensure that Turn off System Restore is unchecked.
