Manual Installation Instructions

Purpose

This document is intended to outline the steps required to manually install Nagios Network Analyzer, along with its prerequisites and sub-components.

Target Audience

This document is written for administrators who are looking to perform a new installation of Nagios Network Analyzer from source, rather than using a pre-configured virtual machine image.

Platform Support

Nagios Enterprises provide support for installing Nagios Network Analyzer on the following Linux Distributions (Only 64-bit supported):

- Red Hat Enterprise Linux (RHEL)
 - ° 7.x/8.x
 - RHEL requires the Optional software channel to be enabled, further details are located here:
 - Enabling RHEL Optional Software Channel
- CentOS
 - ° 7.x/8.x
- CentOS Stream
- Debian
 - 9.x / 10.x
- Ubuntu
 - All active Long Term Support (LTS), these are all the even numbered versions (16, 18, 20)

If you discover bugs or have fixes for installing Nagios Network Analyzer on other platforms, please let us know. We will do our best to incorporate your improvements to expand support for additional platforms in future releases, which will make future installation processes smoother for you and your clients.

Installation Prerequisites

Important: Nagios Enterprises highly recommends and will only support installing Nagios Network Analyzer on a newly installed, "clean" system (a bare minimal install with nothing else installed or configured).

Attempting to install Nagios Network Analyzer on a pre-existing system with other applications already installed can cause the Nagios Network Analyzer installation process to fail, critical system components and settings (e.g. database servers) to be modified in a way that negatively affects other applications, and previously installed applications to be automatically upgraded or removed. While installing Network Analyzer on a system with other applications is possible, it is not recommended due to the possible interactions and complexity of multiple components that are required for Nagios Network Analyzer to function. If you choose to ignore these warnings, you do so at your own risk.

Internet access is required for installation and upgrades!

Terminal Access

These instructions require you to establish a terminal session to the server you plan to install Nagios Network Analyzer on. You will need to login to your server as the root user to perform the installation.

Install Nagios Network Analyzer

There are two methods for installing Nagios Network Analyzer, they both perform a full installation, <u>quick</u> and <u>manual</u>.

1295 Bandana Blvd N, St. Paul, MN 55108 sales@nagios.com US: 1-888-624-4671 INTL: 1-651-204-9102

Manual Installation Instructions

Quick

Execute the following command in your terminal session:

curl https://assets.nagios.com/downloads/nagios-network-analyzer/install.sh | sh

That one command will download and install Nagios Network Analyzer. Please proceed to the <u>Finalize</u> <u>Installation</u> section.

Manual Download

Alternatively, you can install Nagios Network Analyzer by issuing the following commands in your terminal session:

cd /tmp

wget https://assets.nagios.com/downloads/nagios-network-analyzer/nagiosna-latest.tar.gz tar xzf nagiosna-latest.tar.gz cd nagiosna ./fullinstall

Note: If you need to install a specific version of Nagios Network Analyzer, please visit the following page of Nagios Network Analyzer versions to obtain the URL, use that in the wget command above:

https://assets.nagios.com/downloads/nagios-network-analyzer/versions.php

Please proceed to the Finalize Installation section.

Finalize Installation

The installation will be complete when you see this message:

Nagios Network Analyzer Installation Success!

You can finish the final setup steps for Nagios Network Analyzer by visiting: http://<server ip address>/nagiosna/

Navigate to the user interface by using the URL provided in your terminal session.

When you open the URL provided on the console in your web browser, you will be shown the Installation page.

Here you will set your Administrator account Username, Password and email address. You also are able to add your license key if you already purchased your license.

Click Finish Installation to save these settings.
