# Chapter 1 Overview

The Synway CTI Series SHT-16C-CT/PCI/EC(SSW), SHT-16C-CT/PCI/FAX(SSW) are the 16-channel analog voice boards with PCI bus. They are used special for switch. All functions found on general voice boards and specific station boards are available with this board by configuring the various functional modules in different ways.

## 1.1 Functions

- A single board can be installed with at most 8 dual-channel modules, supports 16 voice channels
- Supports ring-alert for external calls
- Station phones on-hook/off-hook detection
- Direct connection between trunk and station keeps a call uninterrupted during power outage
- Calling party info (Caller ID) detection/transmission, DTMF and FSK support
- Activity/silence detection
- Automatic Gain Control (AGC) support in recording operation
- DTMF transmission and detection
- Automatic line voltage detection
- Automatically checks the board to determine the number and type of modules on the board
- The flexible distributed conferencing system sets no limit on the number of simultaneous conferences and participants in each conference, allows monitoring and recording of the whole conference and each individual speaker
- Includes H.100 bus, facilitating smooth connectivity to third-party boards with H.100 bus for the transfer of acquired voice signals to other devices
- Each board has a unique hardware serial number written in the firmware to distinguish itself from other boards and prevent piracy. The number is available via an easy function call with applications
- The on-board authorization code identification circuit is designed for software safety. Users can apply to our company for the authorization code
- Equipped with hot-swap circuit, supports hot swapping of boards during system running, making maintenance and backup easy.

- The on-board lightning-proof circuit reaches the telecom standard and eliminates the damage caused by the lightning
- SHT-16C-CT/PCI/FAX(SSW) shares the fax channel with all voice channels on it, supporting the transmit/receive rate of 14400bps
- SHT-16C-CT/PCI/EC(SSW) supports 64ms echo cancellation per channel
- Compatible with other series of voice boards from Synway

## 1.2 Features

- **On-board SIMM Slots**

Fit modules to board. Contacts on both sides greatly improve connection and ease installation.

- **Module Configurable**

8 on-board dual-channel modules can be freely arranged in pairs or groups for various complex, multi-functional applications, such as call center and recording functions available on a single board.

- **Available Outlet Board with RJ21 or RJ11**

There are two kinds of outlet boards for you to choose. One is RST161 with RJ21 connector, facilitating the use of patch panel for connection layout. The other is RST162 with RJ11 connector, helping the use of telephone jack for direct connection.

- **Selectable Ringing Current & Battery Feed Power Supply Module**

You may choose to install this module on the board to substitute the external ringing current and battery feed power supply, which will provide station modules with battery feed, and enable the phones that are linked to station channels to ring.

- **Programmable Tone Detector**

Detects single or dual tones at any frequency, offering facility for use with a variety of PBXes and key telephone systems.

- **Hot Swapping Supported**

Both the motherboard and the outlet board support hot swapping, allowing users to replace and maintain the board during system running.

- **A Particular Separation Design**

As the mainboard and the outlet board are designed independent from each other, when you pull out the mainboard or reinsert it or replace it with other boards, there is no need to reconnect lines as long as the outlet board is not changed or removed.

- **Professional Driver Algorithm**

Uses SPECDial - a professional driver algorithm - to perform a complete automatic dial process through analog lines, accurately identifies called-party statuses and precisely distinguishes an answering machine from a fax machine that is responding at the remote end.

- **Echo Cancellation**

The self-adaptive echo cancellation feature effectively eliminates echoes under various conditions, which cancels out the effect of voice playback on DTMF and busy tones detection, avoids self-excited oscillation and howling, and minimizes the possibility of registering wrong DTMF and busy tones in a conference call. Compared with the B Series voice boards, the C Series EC boards have the enhanced capability in echo cancellation, i.e. each channel supports 64ms echo cancellation, designed especially for the VoIP and teleconferencing applications.

- **Various CODECs Support**

Offers a large selection of voice CODECs, including hardware-based A-law,  $\mu$ -law, IMA-ADPCM, software-based 16-bit linear PCM, MP3 and VOX.

- **Supports WAV File**

The recorded voice files can be edited and played by audio tools such as Cooledit.

- **Synway's Unified SynCTI Driver Development Platform**

Synway owns the intellectual property rights for the unified high-intelligence SynCTI driver development platform. Each system supports up to 2048 channels. Functions such as the detection and analysis of rings, tones and Caller IDs, are available via simple function calls on the driver platform, without having to understand complex call procedures.

## 1.3 Operation Principle

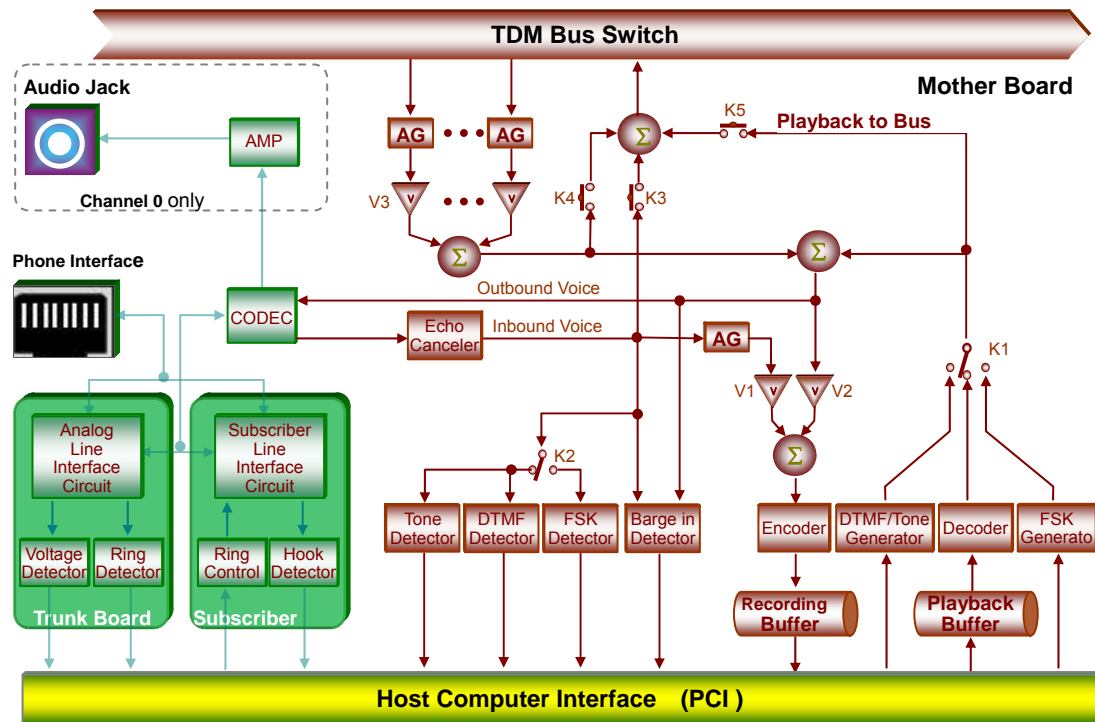

Figure 1-1 Operation Principle

## 1.4 Functional Modules

These boards can be used with the 2.0 series modules from Synway, including analog trunk module, station module, trunk-station composite module, trunk-record composite module and magnet module.

### ● Analog Trunk Module

This module is equipped with the lightning-proof circuit that reaches the telecom standard, and connects its corresponding channel directly to local lines from Central Office Terminal (COT), with abilities to detect line voltage, diagnose line failure, and judge the on-hook/off-hook state of the station phone which is linked with it. See Figure 2-3 and Figure 2-4 for more information.

### ● Station Module

This module functions either as a station phone provided it links directly to a telephone or as an extension phone for the PBX, supporting delivery of the calling party information in FSK/DTMF to the phone. It uses -40V battery feed voltage and the integrated overcurrent/overvoltage circuit protection system, can accommodate a subscriber line in length of up to 5.5km. Refer to Figure 2-5 and Figure 2-6 for details.

### ● Trunk-Station Composite Module

This module accommodates an analog trunk channel and a station channel, ensuring safe communication via an automatic direct connection of the analog trunk channel and

the station channel when the driver is not running or the PC is powered off. See Figure 2-7 and Figure 2-8 for details.

- **Trunk-Record Composite Module**

This module embraces two channels. One is for high-impedance recording in parallel connection and the other works as an analog trunk. See Figure 2-9 and Figure 2-10 for more information.

- **Magnet Module**

This module enables the direct connection of its corresponding channel with a magnet phone line so as to simulate the functions provided by magnet telephones. Refer to Figure 2-11 and Figure 2-12 for details.

## Chapter 2 Installation

### 2.1 Hardware Structure

- SHT-16C-CT/PCI/FAX(SSW)

Figure 2-1 Right and Front Views

Figure 2-2 Rear View

**Notes:**

- 1) This file only illustrates the SHT-16C-CT/PCI/FAX(SSW) board with the above figures but is also applicable to the SHT-16C-CT/PCI/EC(SSW) board which has the similar hardware structure. Always check the label on the board to get the board model before your use.
- 2) Here below is the instruction for the indicators shown in Figure 2-1.

| Channel Type Indicator | Channel Type         | Color  |
|------------------------|----------------------|--------|
|                        | Analog Trunk Channel | Orange |
|                        | Station Channel      | Green  |
|                        | Recording Channel    | Red    |
|                        | Magnet Channel       | Orange |

Table 2-1 Channel Type Indicator

Note that the channel type indicator is off when no modules are installed.

| Channel State Indicator | State | Implication      |
|-------------------------|-------|------------------|
| Green                   | ON    | Channel off-hook |
|                         | OFF   | Channel on-hook  |

Table 2-2 Channel State Indicator

| Hot-swap Indicator | State | Implication                   |
|--------------------|-------|-------------------------------|
| Blue               | ON    | In the course of hot swapping |
|                    | OFF   | Normal                        |
|                    | Flash | Working                       |

## 2.2 System Requirements

### Host System Requirements

CPU: 300MHz Intel® Pentium® II or above

Memory: 256M or more

HD: Depends on individual requirements

#### Supported Operating Systems

Refer to *SynCTI Programmer's Manual.pdf*.

## 2.3 Installation Procedure

**Note: Always turn off the power before installation!**

**Step1: Install the ringing current & battery feed power supply module.**

Skip this step if station modules or trunk-station composite modules are not used.

Install the module and screw it.

Figure 2-20 Installation of Ringing Current & Battery Feed Power Supply Module

**Step2: Plug the desired modules into the module slots on the board, and fit the board into the Synway UMCT intelligent switch.**

**Step3: Connect to analog phone lines or telephones.**

In parallel, connect one end of the phone line to a point on the communication line between the PBX and the phone, and the other end to the on-board RJ21 connector or to the RJ21-to-RJ11 adapter linked with the board.

#### **Interface description:**

An RST161 outlet board has a 50-pin RJ21 connector and an RST162 outlet board

has 16 RJ11 jacks. Each RJ21 connector can be converted into twenty-four 2-pin RJ11 jacks through an RJ21-to-RJ11 adapter. See Figure 2-21 above for the physical layout of the RJ21 connector. Chn-a and Chn-b are a pair of phone lines. Up to 24 pairs of phone lines like this can be connected at the same time. As to the last pair of pins (i.e. the 25<sup>th</sup> and 50<sup>th</sup> pins) in RJ21, they respectively represent spk+, spk-(GND) and can connect to the audio jack. See Figure 2-22 for the connection of this pair of pins.

Figure 2-21 RJ21 Connector

Figure 2-22

## Notes on Connection:

- ① In case of connection with RJ11 jacks, our company provides an RJ21 connecting

line and an RJ21-to-RJ11 adapter and recommends the following connection methods:

Figure 2-23

- ② In case of direct connection to the on-board RJ21 connector, we suggest the following connection methods:

Perform a corresponding connection of Chn-a and Chn-b for each pair of phone lines as shown in Figure 2-21 above.

Note: The RJ21 connecting line we provide has 3 specifications (3m, 5m and 10m) for you to choose. They are all 25-twisted-pair communication cables using the international standard spectrum, can connect directly to our board. See Table 2-4 below for the color of these 25 pairs of pins in RJ21. (To be exact, the 1<sup>st</sup> and the 26<sup>th</sup> pins are the first pair; the 2<sup>nd</sup> and the 27<sup>th</sup> pins constitute the second pair; ...; the 24<sup>th</sup> and the 49<sup>th</sup> pins are the 24<sup>th</sup> pair; the 25<sup>th</sup> and the 50<sup>th</sup> pins constitute the 25<sup>th</sup> pair. Actually, only the first 16 pairs are used by 16-channel boards.)

| Pair Number | 1             | 2               | 3               | 4              | 5              | 6             | 7              | 8                | 9               |
|-------------|---------------|-----------------|-----------------|----------------|----------------|---------------|----------------|------------------|-----------------|
| Color       | White<br>Blue | White<br>Orange | White<br>Green  | White<br>Brown | White<br>Grey  | Red<br>Blue   | Red<br>Orange  | Red<br>Green     | Red<br>Brown    |
| Pair Number | 10            | 11              | 12              | 13             | 14             | 15            | 16             | 17               | 18              |
| Color       | Red<br>Grey   | Black<br>Blue   | Black<br>Orange | Black<br>Green | Black<br>Brown | Black<br>Grey | Yellow<br>Blue | Yellow<br>Orange | Yellow<br>Green |
| Pair Number | 19            | 20              | 21              | 22             | 23             | 24            | 25             |                  |                 |

| Color | Yellow<br>Brown | Yellow<br>Grey | Purple<br>Blue | Purple<br>Orange | Purple<br>Green | Purple<br>Brown | Purple<br>Grey |  |  |
|-------|-----------------|----------------|----------------|------------------|-----------------|-----------------|----------------|--|--|
|-------|-----------------|----------------|----------------|------------------|-----------------|-----------------|----------------|--|--|

Table 2-4 Color of 25 Twisted Pairs in RJ21

**Step4: Connect to the trunk-station composite module.**

Skip this step if direct connection between internal and external lines is not required when the PC is powered off.

A trunk-station composite module contains a trunk channel and a station channel, and is seated in a dual-channel module slot. Before the board is powered on or the driver software is initialized, you may link the station phone and the phone line which share the same module directly to each other, to guarantee the emergency telecommunication. Once the board application program starts to run, the link automatically breaks and the internal and external lines become independent.

**Note:** When trunk-station composite modules are used, the adjacent two channels are by default a station channel and an analog trunk channel. Users can set whichever channel to be a station channel or an analog trunk channel by modifying the configuration file.

**Step5: Boot your computer and install the driver.**

Regarding driver installation, refer to *SynCti\_InstManual.pdf*.

## Key Tips:

- As the system is expected to run for long hours unattended, 'energy-saving' mode should be turned off for both the CPU and the HD in CMOS or WINDOWS operating system. This is to ensure full-speed operation of the computer, or it may lead to a drop in performance or unexpected errors after running for some time.
- A chassis installed with voice boards must be grounded for safety reasons, according to standard industry requirements. A simple way is earthing with the third pin on the plug. No or improper grounding may cause instability in operation as well as decrease in lightning resistance.

# Appendix A Technical Specifications

## Dimensions

Mainboard: 218.5×174.5mm<sup>2</sup>

RST161: 180×115.1mm<sup>2</sup>

RST162: 90×115.1mm<sup>2</sup>

## Weight

Main board: ≈400g (excluding modules)

RST161: ≈170g

RST162: ≈75g

## Environment

Operating temperature: 0℃—55℃

Storage temperature: -20℃—85℃

Humidity: 8%—90% non-condensing

Storage humidity: 8%—90% non-condensing

## Input/output Interface

Telephone line jack: One 50-pin RJ21 or  
Sixteen 2-pin RJ11

## Audio Specifications

CODEC: CCITT A/μ-Law 64kbps,  
IMA ADPCM 32kbps

Distortion: ≤3%

Frequency response: 300-3400Hz (±3dB)

Signal-to-noise ratio: ≥38dB

Echo suppression: ≥40dB

## Maximum System Capacity

Up to 8 voice boards concurrently per system;  
up to 16 channels per board

## Power Requirements

Maximum power consumption: ≤20W

## Impedance

Input impedance: ≥1MΩ/500V DC;

≥10kΩ/1000V AC

Insulation resistance for PC isolation from  
telephone line: ≥2MΩ/500V DC

Telephone line impedance:

Compliant with the national standard  
impedance for three-component network

## Audio Encoding & Decoding

16Bit PCM 128kbps

8Bit PCM 64kbps

A-Law 64kbps

μ-Law 64kbps

VOX 32kbps

ADPCM 32kbps

GSM 13.6kbps

MP3 8kbps

## Sampling Rate

8kHz

## Safety

Lightning Resistance: Level 4

## Appendix B Technical/sales Support

Thank you for choosing Synway. Please contact us should you have any inquiry regarding our products. We shall do our best to help you.
