Regulation

Precautions for the handling of Wireless Communication Devices Wireless LAN Module: GS2100MIP(B-EX700-WLAN2-QM-R) RFID Module: TRW-USM-10 (B-EX706-RFID-U4-US-R), TRW-EUM-10 (B-EX706-RFID-U4-EU-R), TRW-AUM-10 (B-EX706-RFID-U4-AU-R)

For USA

This device complies with Part 15 of the FCC Rules.

- Operation is subject to the following two conditions:
- (1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

Changes or modification not expressly approved by manufacturer for compliance could void the user's authority to operate the equipment.

For Canada

Operation is subject to the following two conditions:

(1) This device may not cause interference, and

(2) This device must accept any interference, including interference that may cause undesired operation of the device.

For Taiwan

Caution

根據低功率電波輻射性電機管理辦法

For safety

Do not operate this product in locations where its use may be prohibited. For example, in an aeroplane or hospital. If you are unsure whether operation is permitted, please refer to and follow the airline company or medical institution guidelines.

Otherwise, flight instrument or medical equipment may be affected, causing a serious accident.

This product may affect the operation of some implanted cardiac pacemakers and other medically implanted equipment. Pacemaker patients should be aware that the use of this product in close proximity to a pacemaker might cause the device to malfunction.

If you have any reason to suspect that interference is taking place, immediately turn off the product and contact your TOSHIBA TEC sales agent.

Do not disassemble, modify, or repair the product as doing so may cause injury.

Modification is also against the Laws and Regulations for Radio Equipment. Please ask your TOSHIBA TEC sales agent for repair.

WARNING!

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

CAUTION!

- 1. This manual may not be copied in whole or in part without prior written permission of TOSHIBA TEC.
- 2. The contents of this manual may be changed without notification.
- 3. Please refer to your local Authorised Service representative with regard to any queries you may have in this manual.

1. PRODUCT OVERVIEW

1.1 Introduction

Thank you for choosing the TOSHIBA B-EX6T series bar code printer. This Owner's Manual contains from general set-up through to how to confirm the printer operation using a test print, and should be read carefully to help gain maximum performance and life from your printer. For most queries please refer to this manual and keep it safe for future reference. Please contact your TOSHIBA TEC representative for further information concerning this manual.

1.2 Features

This printer has the following features:

- The print head block can be opened enabling easy loading of media and ribbon.
- Various types of media can be used as the media sensors can be moved from the center to the left edge of the media.
- Web based functions such as remote maintenance and other advanced network features are available.
- Superior hardware, including the specially developed 8 dots/mm (203 dots/inch) or 12 dots/mm (305 dots/inch) thermal print head which will allow very clear print at a printing speed of 3, 5, 8, 10 or 12 inches/sec.

B-EX6T1/T3-TS/GS12

3ips
5ips
8ips
10ips
12ips

 Comes with USB I/F, LAN I/F, the RTC/USB host I/F card, Ribbon Save Module (for Type 1)
 Besides the optional Cutter Module, there is also an optional Peel off Module, Fanfold paper guide, RS-232C I/F card, Centronics I/F card, Expansion I/O Card, Wireless LAN I/F card, and RFID module

Unpack the printer as per the Unpacking Instructions supplied with the printer.

1.3 Unpacking

NOTES:

- Check for damage or scratches on the printer. However, please note that TOSHIBA TEC shall have no liability for any damage of any kind sustained during transportation of the product.
- 2. *Keep the cartons and internal packing for future transportation of the printer.*

1.4 Accessories

When unpacking the printer, please make sure all the following accessories are supplied with the printer.

 \Box Power cord

□ CD-ROM(1pc.)

 \Box Safety precautions

0

1.5 Appearance

The names of the parts or units introduced in this section are used in the following chapters.

1.5 Appearance

1.5.4 Operation Panel

1.5.5 Interior

Please see **Section 3** for further information about the Operation Panel.

1.6 Options

Option Name	Туре	Description
Disc cutter module	B-EX206-QM-R	To perform a cut the media feeds to the cut position,
		stops and is cut, then back feeds to the print position
Peel Off module	B-EX906-H-QM-R	This enables on-demand (peel-off) operations or to
		rewind the printed labels and backing paper when using
		the rewind guide plate. To purchase the peel off module,
		please inquire with your local distributor.
Fanfold paper guide	B-EX906-FF-QM-R	
RFID module	B-EX706-RFID-U4-EU-R	Installing this module enables read and write of
	B-EX706-RFID-U4-US-R	UHF RFID tags.
	B-EX706-RFID-U4-AU-R	Only available for B-EX6T1 model.
		Note:
		GS/TS12-CN-R do not support the RFID I/F.
		(Please purchase the GS/TS18-CN-R when RFID is
		needed.)
Expansion I/O interface	B-EX700-IO-QM-R	Installing this card in the printer allows connection to an
card		external device with the exclusive interface.
Parallel interface card	B-EX700-CEN-QM-R	Installing this card provides a Centronics interface port.
Serial interface card	B-EX700-RS-QM-R	Installing this card provides an RS-232C interface port.
Wireless LAN interface	B-EX700-WLAN2-QM-R	Installing this card provides Wireless LAN
card		Communication.
		Note:
		GS/TS12-CN-R do not support the WLAN option I/F.
		(Please purchase the GS/TS16-CN-R when WLAN I/F is
		needed.)
Rotary Cutter Module	B-EX206-R-QM-S	To perform on the fly cutting (Cut the media without
		stopping print and feed, back to the print position after all
		cut job is finished.
		Maximum cutting paper width is 112mm.
		Only available in Europe
		Only available for B-EX6T1 model

NOTE:

To purchase the optional kits, please contact the nearest authorised TOSHIBA TEC representative or TOSHIBA TEC Head Quarters.

2. PRINTER SETUP

This section outlines the procedures to setup your printer prior to its operation. The section includes precautions, loading media and ribbon, connecting cables, setting the operating environment of the printer and performing an online print test.

2.1 Installation

To insure the best operating environment and to assure the safety of the operator and equipment, please observe the following precautions.

- Operate the printer on a stable, level surface in a location free from excessive humidity, high temperature, dust, vibration and direct sunlight.
- Keep your work environment static free. Static discharge can cause damage to delicate internal components.
- Make sure the printer is connected to a clean source of AC power and no other high-voltage devices, that may cause line noise interference, are connected to the same mains.
- Assure that the printer is connected to the AC mains with a threeprong power cable that has the proper ground (earth) connection.
- Do not operate the printer with the cover open. Be careful not to allow fingers or articles of clothing to get caught in any of the moving parts, especially the optional cutter mechanism.
- For best results, and longer printer life, use only TOSHIBA TEC recommended media and ribbons.
- Store the media and ribbons in accordance with their specifications.
- This printer mechanism contains high-voltage components; thereforeyou should never remove any of the covers of the machine as you may receive an electrical shock. Additionally, the printer contains many delicate components that may be damaged if accessed by unauthorised personnel.
- Clean the outside of the printer with a clean, dry cloth or a clean cloth slightly dampened with a mild detergent solution.
- Use caution when cleaning the thermal print head as it will become very hot while printing. Wait until it has had time to cool before cleaning. Use only the TOSHIBA TEC recommended print head cleaner to clean the print head.
- Do not turn off the printer power or remove the power plug while the printer is printing or while the ON LINE lamp is flashing.

2.2 Connecting the Power Cord

CAUTION!

- Make sure that the printer Power Switch is turned to the OFF position (⁽⁾) before connecting the Power Cord to prevent possible electric shock or damage to the printer.
- 2. Connect the Power Cord to a supply outlet with a properly grounded (earthed) connection.

1. Make sure that the printer Power Switch is in the OFF (□) position. Connect the Power Cord to the printer as shown in the figure below.

2. Plug the other end of the Power Cord into a grounded outlet as shown in the figure below.

[US Type]

[EU Type]

2.3 Loading Supplies

2.3 Loading Supplies

WARNING!

- 1. Do not touch any moving parts. To reduce the risk of fingers, jewelry, clothing, etc., being drawn into the moving parts, be sure to load the media once the printer has stopped moving completely.
- 2. The Print Head becomes hot immediately after printing, allow it to cool before loading the media.
- 3. To avoid injury, be careful not to trap your fingers while opening or closing the cover.

CAUTION!

- 1. Be careful not to touch the Print Head Elements when lifting the Print Head Block. This may cause missing dots due to static electricity or other print quality problems.
- 2. When loading or replacing the media or ribbon, be careful not to damage the print head with hard objects like watches or rings.

the metal or glass part of a watch

to touch the print head edge.

Care must be taken not to allow a metal object like a ring to touch the print head edge.

Since the print head element can be easily damaged by shock, please treat it carefully and do not hit it with hard objects.

2.3.1 Loading the Media

NOTES:

Print Head can be raised.

2. Do not turn the Locking Ring on the supply holder counter-

clockwise too far or it may come off the Supply Holder.

turned to **FREE** position, the

1. When the Head Lever is

The following procedure shows the steps to properly load the media into the printer so that it feeds straight through the printer.

The printer prints both labels and tags.

- 1. Open the Top Cover.
- **2.** Turn the Head Lever to the **FREE** position and release the Print Head Block Holder Plate.
- **3.** Open the Print Head Block.

4. Turn the Locking Ring counterclockwise and remove the Supply Holder from the Supply Shaft.

- **5.** Put the media on the Supply Shaft.
- **6.** Pass the media around the Guide Shaft, then pull the media towards the front of the printer.

NOTE: Do not over-tighten the Locking Ring of the Supply Holder.

7. Align the tab of the Supply Holder with the groove in the Supply Shaft, and push the Supply Holder against the media until the media is held firmly in place. This will center the media automatically. Turn the Locking Ring clockwise to secure the Supply Holder.

Supply Shaft

Groove Locking Ring

Media

Guide Shaft

- 8. Place the media between the Media Guides and adjust them to the media width. Once in the correct position tighten the Locking Screw.
- 9. Check that the media's path through the printer is straight. The media should be centered under the Print Head.

10. Lower the Print Head Block.

11. Once the media is loaded it may be necessary to set the Media Sensors used to detect the start position for label or tag.

Setting the Feed Gap Sensor position

(1) Manually move the Media Sensor so that the Feed Gap Sensor is positioned at the centre of the labels. (• indicates the position of the Feed Gap Sensor). Gap

NOTE:

Be sure to set the black mark sensor to detect the centre of the black mark, otherwise a paper jam or no paper error may occur.

Setting the Black Mark Sensor position

- (1) Pull about 500 mm of media out of the front of the printer, turn the media back on itself and feed it under the Print Head past the sensor so that the black mark can be seen from above.
- (2) Manually move the Media Sensor so that the Black Mark Sensor is in line with the center of the black mark on the media. (I indicates the position of the Black Mark Sensor).

Media Media Sensor

Black Mark Sensor (

12. Batch mode

In batch mode, the media is continuously printed until the number of labels/tags specified in the issue command has been printed.

- **13.** Loading with peel off module When the optional Strip Module is fitted, the label is automatically removed from the backing paper at the Strip Plate as each label is printed.
- (1) Remove enough labels from the leading edge of the media to leave 500mm of backing paper free.
- (2) Insert the backing paper under the Strip Plate.
- (3) Wind the backing paper onto the Take-up Spool and fix it in position with the Take-up Clip. (Wind the paper counter-clockwise around the spool.)
- (4) Rotate the Take-up Spool counter-clockwise a few times to remove any slack in the backing paper.

NOTES:

- 1. Be sure to set the Selection Switch to STANDARD/ PEEL OFF position.
- 2. The backing paper is easier to feed back to the Take-Up Spool if the Front Plate is removed.
- 3. Fit the Take-Up Clip so that the longer side of the clip is fitted into the shallow groove in the Take-Up Spool.
- 4. The backing paper can be wound directly onto the Take-up Spool or a paper core.

WARNING!

The cutter is sharp, so care must be taken not to injure yourself when handling the cutter.

CAUTION!

- Be sure to cut the backing paper of the label. Cutting labels will cause the glue to stick to the cutter which may affect the cutter quality and shorten the cutter life.
- 2. Use of tag paper when the thickness exceeds the specified value may affect the cutter life.
- 3. When use perforation paper, should not be cut on the perforation, should be cut after perforation.

14. Loading with cutter

When the optional Cutter Module is fitted, the media is automatically cut. A disc cutter and rotary cutter are available as an option.

Insert the leading edge of the media into the cutter until it comes out the Media Outlet of the Cutter Module.

NOTES:

When the rotary cutter is used, select in the system mode 5) RIBBON SAVE "POSITION 1" 6) HU CUT/RWD. "ON "to print label and tags, But it may need adjustment on the end of label or tag roll depend on its label or tag pitch. Please contact your supplier where you purchased the product about label or tag design.

And it may also select 5) RIBBON SAVE "OFF" 6) HU CUT/RWD. "OFF" to print direct thermal tag with checking print quality after back feeding.

2.3.2 Loading the Ribbon

NOTES:

- 1. When attaching the ribbon stoppers, make sure that the pinchers face into the printer
- 2. Be sure to remove any slack in the ribbon before printing. Printing with a wrinkled ribbon will reduce the print quality.
- 3. The Ribbon Sensor is mounted on the rear of the Print Head Block to detect a ribbon end. When a ribbon end is detected a "NO RIBBON" message will appear on the display and the ERROR LED will illuminate.

There are two types of media available for printing on: thermal transfer and direct thermal (which has a chemically treated surface). DO NOT LOAD a ribbon when using direct thermal media.

1. Grasp the tabs on the top and bottom of the Ribbon Stoppers and move them back to the end of the Ribbon Shaft.

2. Leaving plenty of slack between the ribbon spools, place the ribbon onto the Ribbon Shafts as shown below.

Ribbon path

2.3.2 Loading the Ribbon (Cont.)

- **3.** Slide the Ribbon Stoppers along the Ribbon Shafts so that the ribbon will be centered when fitted.
- **4.** Lower the Print Head Block and set the Print Head Block Holder Plate .
- **5.** Take up any slack in the ribbon. Wind the leading tape onto the ribbon take-up roll until the ink ribbon can be seen from the front of the printer.

Print Head Holder Block Plate

- 6. Turn the Head Lever to **Lock** position to close the Print Head.
- **7.** Close the Top Cover.

⑦ Auto Ribbon Saving Mode

B-EX6T1 has a ribbon saving function, it is possible to reduce ribbon waste by stopping the ribbon feed for non-print areas. To activate the ribbon save a minimum non-print area is required as below.

203 & 305 dpi models

(mm)

Print speed	3 ips	5 ips	8 ips	10 ips	12 ips
Min. non-print area	20	20	25	35	60

to Your Printer

2.4 Connecting the Cables The following paragraphs outline how to connect the cables from the printer to your host computer, and will also show how to make cable connections to other devices. Depending on the application software you use to print labels, there are 5 ways to connect the printer to your host computer. These are:

- An Ethernet connection using the printer's standard LAN connector.
- A USB cable connection between the printer's standard USB connector and your host computer's USB port. (Conforming to USB 2.0)
- A serial cable connection between the printer's optional RS-232 serial connector and one of your host computer's COM ports.
- A parallel cable connection between the printer's optional parallel connector and your host computer's parallel port (LPT).
- Wireless LAN using an optional Wireless LAN board.

For details, refer to APPENDIX 2.

2.5 Turning the Printer ON/OFF

When the printer is connected to your host computer it is good practice to turn the printer ON before turning on your host computer and turn OFF your host computer before turning off the printer.

2.5.1 Turning ON the Printer

CAUTION!

Use the power switch to turn the printer On/Off. Plugging or unplugging the Power Cord to turn the printer On/Off may cause fire, an electric shock, or damage to the printer.

NOTE:

If a message other than ON LINE appears on the display or the ERROR LED lamp is illuminated, refer to Section 5.1, Error Messages. 1. To turn ON the printer power, press the Power Switch as shown in the diagram below. Note that (1) is the power ON side of the switch.

2. Check that the ON LINE message appears in the LCD Message Display and that the ON LINE and POWER LED lights are illuminated.

2.5.2 Turning OFF the Printer

CAUTION!

- Do not turn off the printer power while the media is being printed, as this may cause a paper jam or damage to the printer.
- 2. Do not turn off the printer power while the ON LINE lamp is blinking as this may cause damage to your computer.

- **1.** Before turning off the printer Power Switch verify that the ON LINE message appears in the LCD Message Display and that the ON LINE LED light is on and is not flashing.
- 2. To turn OFF the printer power press the Power Switch as shown in the diagram below. Note that (□) is the power OFF side of the switch.

Power Switch

2.6 Printer Setting

2.6.1 SCOPE

This specification describes key operations using the keys and the LCD of the B-EX6T series high-end industrial bar code printers.

2.6.2 OUTLINE

Key operations are different depending on the printer mode: Online mode in which operations are carried out through the keys and error messages are displayed while the printer is connected to the host such as a PC, and the system mode in which self-diagnosis and setting of various parameters are performed. This specification describes the key operation procedures with the printer keys and the LCD. The names of the keys and LCD messages used in this specification are written in English

2.6.3 OPERATION PANEL

2.6.4 OUTLINE OF EACH MODE

This chapter describes the outline of each mode supported by the printer. Refer to each chapter for detailed information.

2.6.4.1 ONLINE MODE

This mode is mainly used by users (operators).

The label or tag can be issued in the online mode. When an error occurs, the help function shows the cause of the error, troubleshooting, and recovery from the error. The threshold setting, described below, is also a part of the online mode.

2.6.4.1.1 Threshold setting mode

Threshold setting mode is provided to correct a print failure with pre-printed media. When using pre-print label, print start positions may not be detected correctly with the usual media sensor threshold, depending on the ink type. Such error can be prevented by setting the threshold just for the pre-printed media to be used. Since the threshold setting value is stored in the non-volatile memory, it is unnecessary to set the threshold again as long as the same pre-print media is used.

2.6.4.1.2 RFID calibration mode

In the RFID calibration mode, the distance to the optimum tag write/read position and AGC value required for properly writing/reading data on/from RFID tags are obtained through a calibration, the obtained values are set on the printer automatically, and they are reflected in the printer operation. To write/read data on/from RFID tags with the bar code printer, it was necessary to manually set a distance to the write/read position and an AGC value, used for detecting the target tag, with @003 command and in the system mode. However, these are automatically done in the RFID calibration mode.

2.6.4.1.3 Information mode

In the information mode, the total feed amount counted during feeding and printing operations is displayed on the LCD in units of centimeter and inch. Printing of the feed amount is performed on request.

2.6.4.2 USER SYSTEM MODE

The user system mode is accessible from the online mode. This mode contains parameters and settings which might be frequently changed by users (administrator) or service persons. In addition to the functions of parameter setting and fine adjustment (in common with the System Mode), there are the following additional features, issue condition display function, manual threshold setting, and system tools menu.

The values set in thiese modes are stored in the non-volatile memory.

2.6.4.3 SYSTEM MODE

This mode is mainly used by service persons or the production department staff for adjustment of the printer before shipment. System mode contains settingswhich should not be changed so frequently. In addition to the parameter setting and fine adjustment menus (in common with the User System Mode), there are sensor adjustment, interface, RFID, RTC and BASIC setting menus. Other extended functions are self-diagnosis, test print, RAM clear (re-initialize the printer), preshipment adjustments for factory use, and the menu which enables saving parameter settings, external characters, TPCL commands to an external USB memory stick or copying data from aUSB memory stick to the printer. The values set in this mode are stored in the non-volatile memory.

2.6.4.4 DOWNLOAD MODE

This mode is used to download boot and main programs.

2.6.4.4.1 AUTO CONFIGURATION MODE

In this mode, the printer firmware is automatically updated with the program stored in a USB memory stick.

2.6 Printer Stting

Notes:

- 1. To enter the download mode, system mode or auto configuration mode, keep holding down the specified key until the menu is displayed.
- 2. Power off

When the power of the printer is turned off, the ONLINE and ERROR LEDs synchronously flash at a 500-ms interval (ON: 250ms, OFF: 250ms). When the LEDs are unlit, the printer power turns off. The printer power should not be turned on again while these LEDs are flashing. Otherwise, a "SYSTEM ERROR 02 POWER FAILURE" message will be displayed, and the LCD message may corrupt before the error message is displayed.

2.6.6 Initial Setting Wizard

THE first time the printer is used after opening carton box or after a RAM clear, the initial setting wizard will start when the power is switched on. This wizard enables setting basic parameters, such as the LCD language and print mode. The values set with this wizard can be changed in the system mode and also by command.

[LEFT]	None	Displays the next screen without saving the changes.
[RIGHT]	None	Displays the upper-level screen without saving the changes.

Key functions (Wizard screen)

2.7 Printer Drivers

Once you install the TOSHIBA printer driver on your Windows host computer, you can use the TOSHIBA bar code printer in the same way you would a laser or ink jet printer.

You can use the printer by connecting a USB or LAN cable to your host computer.

The installation procedure of the printer driver differs depending on the printer model and the connection method.

The Printer driver and installation manual can be downloaded from the Toshiba TEC Web-site

http://www.toshibatec-ris.com/products/barcode/download/driver_agreement.html

If an older version of the printer driver has been already installed, you must uninstall it and restart the computer before installing a newer version.

2.8 Print Test

After your drivers have been installed , perform a print test.

Performing a print test using the Printer Driver

The printer driver's Properties screen allows you to set the communication conditions, media size, and other printing conditions in accordance with your operating environment. For details, refer to the **Help for the Windows Printer Drivers** screen.

Example: Stock tab display of the Printer Driver's Properties Screen

Post-print Action:	Whether to use the cutter or not is selectable.
Fine Adjustment:	Adjustment values for the feed amount, cut/strip
	position, etc. can be set.

3. ONLINE MODE

3.1 Key Functions

This chapter describes the usage of the keys on the Operation Panel in Online mode.

When the printer is in Online mode and connected to a host computer, the normal operation of printing on labels or tags can be accomplished.

⑦ Key functions in the online mode

Key	Function
[FEED]	(1) Feeds the set media length.
	(2) Prints the data in the image buffer according to
	the system mode setting.
	(3) Clears the help message.
[RESTART]	(1) Resumes printing after a temporary pause in
	printing or after an error.
	(2) Places the printer in the initial state which is
	obtained when the power is turned on.
	(3) Places the printer in the user system mode.
	(4) Clears the help message.
[PAUSE]	(1) Stops printing temporarily.
	(2) Programs the threshold values.
	(3) Clears the help message.
[MODE]	(1) Places the printer in the user system mode.
	(2) Clears the help message.
[CANCEL]	(1) Clears the job.
	(2) Displays previous help message page.
[ENTER]	(1) Displays next help message page.
	(2) Clears the help message.
[UP]	(1) Scrolls up
[DOWN]	(1) Scrolls down
[LEFT]	(1) Displays previous help message page.
[RIGHT]	(1) Displays next help message page.

3.2 LCD

3.2 LCD

Online state

Description
Model name and firmware version
Message
The number of labels printed
IP address (only when LAN/WLAN is enabled.)
Radio signal strength (only when WLAN is enabled.)
Indicates the strength of the radio signal in 4 levels.
WLAN connection (only when WLAN is enabled.)
d Lights up when connecting to an access point.
d Flashes while roaming.
d Goes off when disconnected.
Presence of a print job
Appears when a print job exists.
RFID (only when RFID module is installed.)
d Appears when a communication between the printer and the
RFID module is enabled.
d Flashes while communicating with the RFID module.
Ribbon near end
Flashes when a ribbon near end state is detected.
The number of remaining labels to print
Error description and solution
Help guide
Appears when a help guide message is provided. Press the [RIGHT] key to see the help guide message

3.3 Icon

Five kinds of icon are displayed in the bottom line of the online mode screen.

These icons are displayed only in the online mode screen.

Icon	Explanation
Wireless LAN icon	• Displayed and used when the wireless LAN module is installed.
	 The graph shows the radio field strength.
	Graph 0: Outside of communication range
	Graph 1: Radio field strength is weak.
	Graph 2: Radio field strength is middle.
	Graph 3: Radio field strength is strong.
Link icon	 Displayed and used when the wireless LAN module is installed.
	 Displayed while the printer is communicating by wireless LAN.
	 Flashes while roaming.
	J OFF: No connection
	ON: Connecting to an access point
	JI Flashing: Roaming (*1)
Data transmission icon	 Appears when a print job is present.
	ON: Print job is present.
RFID icon	 Displayed and used when the RFID module is installed.
	 Appears when the RFID module type has been set and a
	communication between the printer and the RFID module is enabled.
	• Flashes while communications and operating sequence are made with
	the RFID module.
	-
	ON: Module type has been set and the printer is ready to communicate with the RFID module.
	Image: Flashing: Communicating
Ribbon near end icon	 Ribbon near end is detected. Flashes when the ribbon is close to the end. Ribbon near end is detected depending on the diameter of unused ribbon. Ø38 mm is equivalent to 30-meter ribbon and Ø43 mm is equivalent to 70-meter ribbon. Flashing: Ribbon near end state (*1)

(*1) The icon flashes at a 1-second interval (ON: 500 msec., OFF: 500 msec.)
3.4 Operation Example

3.4 Operation Example (Cont.)

Cancellation of Print Job

3.5 User System Mode

3.5 USER SYSTEM MODE

3.5.1 OUTLINE OF USER SYSTEM MODE

- 1. The printer enters the user system mode with the following operations.
 - While the printer is in pause state, perform either of the following operations:
 - Hold down the [RESTART] key for 3 sec. or more.
 - Hold down the [MODE] key for 3 sec. or more.
 - While the printer is in online, perform the following operation:
 - Hold down the [MODE] key for 3 sec. or more.
- 2. The user system mode is intended for performing parameter and other settings.
- 3. The key operations for the user system mode are described below.

For the key functions and display, please refer B-EX6T key operation manual.

Display								
USER SYSTEM MODE C1.6								
	<1>EXIT							
	<2>SET PARAMETERS							
	<3>DETECTION LEVEL							
		<4>SYSTEM TOOLS						
	▼							

Top menu list

Outline of the top menu

<1>EXIT	Used to return the printer to online state. (The printer is not reset.)
<2>SET PARAMETERS	Used to set the parameters for each printer function.
<3>DETECTION LEVEL	Used to set the threshold value.
<4>SYSTEM TOOLS	Used to print data sent from the host or store it in USB memory.
<5>SHOW ISSUE CONDITION	Used to display the print conditions (such as sensor type, print speed and
	orientation).
<6>RESET	Used to reset the printer.

3.5.2 EXIT

The printer is returned from the user system mode to the online mode. (No reset is performed.) Some parameter settings are reset when the Exit is performed. The parameters to be reset are indicated with "Reset Reg.". Other parameters are not reset

3.6 Power Save Function

3.6.1 Entering the Power Saving Mode

When the printer stays in any of the following statuses for the specified length of time, it enters power saving mode.

- Online (Idle, communicating)
- Pause
- Error
- Waiting for label to be removed
- System mode (except for self-diagnosis, test print, sensor adjustment)
- User system mode (except for dump)
- Pause state of the expansion I/O

When the printer enters the power saving mode, "POWER SAVING MODE" is displayed on the LCD and the backlight goes off.

When the following occurs in the power saving mode, the LCD wakes up.

- A key is pressed. (Except for [RESTART] or [FEED] key which causes printing or paper feed.)
- The head lever is released and locked.
- The status of the pause or active signal of the expansion I/O changes.

The LCD shows "POWER SAVING MODE" and the backlight goes off again if no status change occurs on the printer for 15 minutes.

3.6.2 Exiting the Power Saving Mode

The printer exits the power saving mode when:

- The Printing (printing caused by a depression of the [RESTART] key is included.) is performed.
- paper feed or re-print s caused by a depression of the [FEED] key
- printing or paper feed is initiated through the expansion I/O
- automatic calibration is performed
- sensor adjustment is performed in the system mode
- the printer receives commands (U1/U2, T, XS, IB, or RFID-related commands).

4. MAINTENANCE

WARNING!

- 1. Be sure to disconnect the power cord before performing maintenance. Failure to do this may cause an electric shock.
- 2. To avoid injury, be careful not to pinch your fingers while opening or closing the cover and print head block.
- 3. The print head becomes hot immediately after printing. Allow it to cool before performing any maintenance.
- 4. Do not pour water directly onto the printer.

4.1 Cleaning

4.1.1 Print Head/Platen/ Sensors

CAUTION!

- 1. Do not use any volatile solvent including thinner and benzene, as this may cause discoloration to the cover, print failure, or breakdown of the printer.
- 2. Do not touch the Print Head Element with bare hands, as static may damage the Print Head.

This chapter describes how to perform routine maintenance.

To ensure the continuous high quality operation of the printer, you should perform a regular maintenance routine. For high usage it should be done on a daily basis. For low usage it should be done on a weekly basis.

To maintain the printer performance and print quality, please clean the printer regularly, or whenever the media or ribbon is replaced.

- **1.** Turn off the power and unplug the printer.
- **2.** Open the Top Cover.
- **3.** Turn the Head Lever to the "**FREE**" position, and then release the Print Head Block Holder Plate.
- **4.** Open the Print Head Block.
- **5.** Remove the ribbon and media.

CAUTION! When cleaning the print head, be careful not to damage the print head with hard objects like watches or rings.

4.1.1 Print Head/Platen/ Sensors (Cont.)

NOTE:

Please purchase the Print Head Cleaner from your authorised TOSHIBA TEC service representative. **6.** Clean the Print Head Element with a Print Head Cleaner or a cotton swab or soft cloth slightly moistened with alcohol.

- **7.** Wipe the Platen, Feed Roller, and Pinch Roller with a soft cloth slightly moistened with alcohol. Remove dust or foreign substances from the internal parts of the printer.
- **8.** Wipe the Feed Gap Sensor and Black Mark Sensor with a dry soft cloth.

Wipe the covers and panels with a dry soft cloth or a cloth slightly moistened with a mild detergent solution.

4.1.2 Covers and Panels

CAUTION!

- 1. DO NOT POUR WATER directly onto the printer.
- 2. DO NOT APPLY cleaner or detergent directly onto any cover or panel.
- 3. NEVER USE THINNER OR OTHER VOLATILE SOLVENT on the plastic covers.
- 4. DO NOT clean the panel, covers, or the supply window with alcohol as it may cause them to discolour, lose their shape or develop structural weakness.

4.1.3 Optional Disc Cutter

Module

WARNING!

- 1. Be sure to turn the power off before cleaning the Cutter Module.
- As the cutter blade is sharp, care should be taken not to injure yourself while cleaning.

The disc cutter is available as an option.

- **1.** Turn off the power and open the Top Cover.
- **2.** Turn the Head Lever to Free position, then release the Print Head Block Holder Plate
- **3.** Open the Print Head Block.

4. Unscrew the Plastic Head Screw so that the Cutter Unit will open

- **5.** Clean the Cutter with a soft cloth slightly moistened with alcohol.
- **6.** Attach the Cutter Cover.

4.1.4 Optional Rotary Cutter Module

ARNING!

- 1. Be sure to turn the power off before cleaning the Cutter Module.
- As the cutter blade is sharp, care should be taken not to injure yourself while cleaning.

The Rotary cutter is available as an option. (Only for Europe)

- **1.** Turn off the power and open the Top Cover.
- **2.** Turn the Head Lever to Free position, then release the Print Head Block Holder Plate
- **3.** Open the Print Head Block.

4. Unscrew the 2 Metal Head Screws to remove the cutter cover.

- **5.** Clean the Cutter with a soft cloth slightly moistened with alcohol.
- **6.** Attach the Cutter Cover.

5.1 Error Messages

5. TROUBLESHOOTING

This chapter lists the error messages, possible problems, and their solutions.

WARNING!

If a problem cannot be solved by taking the actions described in this chapter, do not attempt to repair the printer. Turn off and unplug the printer, then contact an author TOSHIBA TEC service representative for assistance.

5.1 Error Messages

NOTES:

If an error is not cleared by pressing the **[RESTART]** key, turn the printer off and then on. After the printer is turned off, all print data in the printer is cleared.

Error Messages	Problems/Causes	Solutions
HEAD OPEN	The Print Head Block is opened in	Close the Print Head Block.
	Online mode.	
	Feeding or printing has been attempted with the Print Head Block open	Close the Print Head Block. Then press the [RESTART] key
COMMS ERROR	A communication error has occurred.	Make sure the interface cable is correctly
		connected to the printer and the host and
		the host is turned on.
PAPER JAM	1. The media is jammed in the media path. The media is not fed smoothly.	 Remove the jammed media, and clean the Platen. Reload the media correctly. Press the [RESTART] key. ⇒ Section 5.3.
	2. The media is not loaded properly.	 Reload the media correctly. Then press the [RESTART] key. ⇒ Section 2.3.
	3. Wrong Media Sensor is selected for the media being used.	3. Turn the printer off and then on. Select the Media Sensor for the media type being used. Resend the print job.
	4. The Black Mark Sensor is not correctly aligned with the Black Mark on the media.	 4. Adjust the sensor position, then press the [RESTART] key. ⇒ Section 2.3.1.
	5. Size of the loaded media is different from the programmed size.	5. Replace the loaded media with one that matches the programmed size, press the [RESTART] key, or turn the printer off and then on, select a programmed size that matches the loaded media. Resend the print job.
	6. Media sensor has not been properly calibrated for the media being used.	6. Refer to Section 2.10 to set the threshold. If this does not solve the problem, turn off the printer, and call a TOSHIBA TEC authorised service representative.

		\Rightarrow Section 2.6.2.

5.3 Removing Jammed Media

CAUTION!

Do not use any tool that may damage the Print Head.

This section describes, in detail, how to remove jammed media from the printer.

- 1. Open the Top Cover.
- **2.** Turn the Head Lever to **FREE** position, then open the Print Head Block Holder Plate.
- **3.** Open the Print Head Block.
- **4.** Remove the ribbon and media.

Print Head Block

Print Head Block Holder Plate

- **5.** Remove the jammed media from the printer. DO NOT use any sharp implements or tools as these could damage the printer.
- **6.** Clean the Print Head and Platen, then remove any further dust or foreign substances.
- **7.** Paper jams in the Cutter Unit can be caused by wear or residual glue from label stock on the cutter. Do not use non-specified media in the cutter.

CAUTION!

When removing the jammed media, be careful not to damage the print head with hard objects like watches or rings.

Since the print head element can be easily damaged by shock, please treat it carefully and do not hit it with hard objects.

NOTE:

If you get frequent jams in the cutter, contact a TOSHIBA TEC authorized service representative.

6. PRINTER SPECIFICATIONS

This section describes the printer specifications.

Model		B-EX6T1/T3-GS	B-EX6T1/T3-TS		
Destination	QM: World wide	B-EX6T1/T3-GS12-QM-R	B-EX6T1/T3-TS12-QM-R		
	CN: China	B-EX6T1/T3-GS12-CN-R	B-EX6T1/T3-TS12-CN-R		
Dimension (W	x D x H)	331 mm x 460 mm x 310 mm			
Weight (kg)		20 kg			
Operating tem	perature range	5 degC to 40 degC (40 degF to 104 de	egF)		
Relative humic	lity	25% to 85% RH (no condensation)			
Power supply		Universal switching power source AC	2 100 V to 240 V, 50/60 Hz +/- 10%		
Input voltage		AC100 V to 240 V, 50/60 Hz +/- 10%			
Power	During a print job*	210W 2.4A - 0.95A			
Consumption	During stand-by	15W or less			
	During sleep mode	5.7W 0.09A			
Resolution		8 dots/mm (203 dpi)	12 dots/mm (305 dpi)		
Printing metho	od	Thermal transfer or Direct Transfer			
Printing speed		76.2 mm/sec. (3 inches/sec.)			
		127.0 mm/sec. (5 inches/sec.)			
		203.0 mm/sec. (8 inches/sec.)			
		254.0 mm/sec. (10 inches/sec.)			
		304.8 mm/sec. (12 inches/sec.)			
		When the Rotary cutter is used, printer automatically adjust to 8ips. If when			
		specified, faster speed can be more than 8ips.			
Available med	lia width (including	50mm to 165mm			
backing paper)					
Effective print width (max.)		160.0 mm (203DPI) 159.9 mm (305DPI)			
Issue mode		Batch			
		Peel Off (Strip mode is enabled only when the optional Strip Module is			
		installed.)			
		Cut (Cut mode is enabled only when the optional Cutter Module is installed)			
I CD Massaga	display	Cranhia tuna 129 y 64 data ar mara, with healt light			
LCD Message display		Graphic type 128 x 64 dots or more, with back light

7.1 Media

7. SUPPLY SPECIFICATIONS

7.1 Media

Please make sure that the media being used is approved by TOSHIBA TEC. The warranty does not apply when a problem is caused by using media that is not approved by TOSHIBA TEC.

For information regarding TOSHIBA TEC approved media, please contact a TOSHIBA TEC authorized service representative.

7.1.1 Media Type

Two types of media can be loaded for this thermal transfer and direct thermal printer: label or tag. The table below shows size and shape of the media available for this printer.

	LABEL/TAG	BEL/TAG Batch mode (mm)	Strip mode (mm)	Cut mode	
Item				Rotary cutter (mm)	Disc cutter (mm)
Media pitch ①	Label	10.0 - 1500.0	25.4 - 256.0	38.0 - 1500.0	26.4 - 1500.0
	Tag	10.0 - 1500.0		3"/sec., 5"/sec.: 30.0 - 1500.0 8"/sec.: 38.0 - 1500.0	25.4 - 1500.0
Label length (2)		8.0 - 1498.0	23.4 - 254.0	25.0 - 1494.0	20.4 - 1494.0 (*1)
Width including backing paper ③		50.0 - 165.0	50.0 - 165.0	50.0 - 112.0	50.0 - 165.0
Label width ④		47.0 - 162.0	47.0 - 162.0	47.0 - 109.0	47.0 - 162.0
Gap length (5)		2.0 - 20.0 6.0 - 20.		0	
Black mark length (Tag paper) 6		2.0 - 10.0			
Effective print width ⑦		10.0) - 159.9	10.0 - 107.0	10.0 - 159.9

		Batch mode (mm)	Strip mode (mm_)	Cut mode	
ltem				Rotary cutter (mm)	Disc cutter (mm)
Effective print	Label	6.0 - 1496.0	21.4 - 252.0	23.0 - 1492.0	18.4 - 1492.0
length (8)	Tag	8.0 - 1498.0		3"/sec., 5"/sec.: 28.0 - 1496.0 8"/sec.: 36.0 - 1496.0	23.4 - 1494.0
Thickness	Label	0.13-0.17	0.13-0.17	0.13-0.17	0.13-0.17
	Tag	0.15-0.25		0.15-0.29 0.263 (30 - 50 mm width)	0.15-0.17
Maximum effective length for on the fly issue				749	
Maximum outer roll diameter		φ200			
Roll direction		Inside			
Inner core diameter		φ76.2±0.3			

*1 when the disc cutter is used, minimum label length shall be 23.4mm- (gap length/2) or longer

NOTES:

1. To ensure print quality and print head life use only TOSHIBA TEC specified media.

- 2. When using the peel-off at 12"/sec or more for 203dpi model, issue at 10"/sec.
- When using the peel-off at 10"/sec or more for 305dpi model, issue at 8"/sec. 3. The ratio of a label length to a gap length must be a minimum of 3 to 1 (3:1).
- 4. When using label stock in cut mode, be sure to cut in the gaps. Cutting labels will cause the adhesive to stick to the cutter, which may affect the cutter performance and shorten the cutter life.
- 5. When the Rotary cutter is used, it automatically adjusts to 8ips if when specified faster speed is more than 8ips.

7.1.2 Detection Area of the Transmissive Sensor

The Transmissive Sensor is movable from the centre to the left edge of media. The Transmissive Sensor detects a gap between labels, as illustrated below.

7.1.3 Detection Area of the Reflective Sensor

- 1. The sensor is movable in the range from the center of the paper to the left end.
- 2. The reflectance of the black mark must be 10% or less with a waveform length of 950 nm.
- 3. The sensor detects at the center of the black mark.
- 4. The black marks, if necessary, must be printed on the labels in the gap areas.
- 5. Rectangular holes can substitute the black marks, on the condition that nothing is printed on the back side. Round holes cannot be detected by the reflective sensor.

7.1.4 EFFECTIVE PRINT AREA OF PAPER

7.1.4.1 Relationship between Print Head Effective Print Width and Paper Width

7.1.4.2 Effective Print Area of Tags and Labels

NOTES:

- 1. Print quality in the shaded area is not guaranteed. For the label, printing in the 1-mm width area around the label is not guaranteed as well as the shaded area shown above.
- 2. The center of the paper (label and tag) is almost aligned with the center of the print head.
- 3. If printing is performed in the shaded area, the ribbon may wrinkle. This may affect the print quality of the guaranteed printing area.

7.2 Ribbon

Please make sure that the ribbon being used is approved by TOSHIBA TEC. The warranty does not apply to any problem caused by using non-approved ribbons.

For information regarding TOSHIBA TEC approved ribbon, please contact a TOSHIBA TEC service representative.

	B-EX6T Type1	B-EX6T Type3	
Ribbon Width	55mm to 170mm		
Max Ribbon Length	600m *Using AG6E ribbon:800m.		
Max Ribbon OD	φ90mm		
Ribbon Core	Inside 25.7±0.2mm		
Туре	Ribbon for edge head	Ribbon for flat head	
Ribbon winding	Outside	Outside	

The table below shows the correlation between ribbon width and media width (backing paper is not included.)

Ribbon width	Media width	Ribbon width	Media width	Ribbon width	Media width
55 mm	50 mm	102 mm	80-97 mm	170 mm	130 – 165 mm
68 mm	51-63 mm	112 mm	98 – 107 mm		
76 mm	64 - 63 mm	114 mm	98 – 109 mm		
84 mm	64 – 79 mm	134 mm	108 - 129 mm		

NOTES:

1. To ensure print quality and print head life use only TOSHIBA TEC specified ribbons.

2. To avoid ribbon wrinkles use a ribbon that is wider than the media by 5 mm or more. However, too much differences in width between the two may equee wrinkles.

difference in width between the two may cause wrinkles.

7.3 Recommended Media and Ribbon Types

Media type	Description
Vellum paper and labels	General use for low cost applications.
Coated paper	Matt coated paper General use including applications that require small letters and/or symbols.
	Glossy coated paper Used where a high-grade finish is required
Plastic films	 Synthetic film (Polypropylene, etc.) This water-proof and solvent-resistant material has high physical strength and low-temperature resistance, but poor heat resistance (dependant upon material). This material can be used for labels stuck to recyclable containers, so it can be recycled in the same process. PET film This water-proof and solvent-resistant material has high physical strength, and low-temperature resistance as well as heat resistance. This material is used for many applications, especially where high durability is required. Mode/serial plate labels, caution labels, etc.
	Polyimide This material gives the best performance on heat resistance (greater than PET film). It is often used for PCB labels as it can withstand passage through a solder bath.

7.3 Recommended Media and Ribbon Types (Cont.)

Ribbon type	Description
Smear-less ribbon (Wax resin ribbon)	Good match for coated paper. The printed image will resist water and
	light rubbing.
Scratch and solvent resistance ribbon	Very good match for plastic films (synthetic paper, PET, polyimide,
	etc.)
	Scratch and solvent resistance
	Heat resistance with PET and polyimide.

Combination of Media and Ribbon

Media type Ribbon type	Vellum paper and label	Coated paper	Plastic films
Smear-less ribbon (wax- resin ribbon)		0	
Scratch/solvent resistance ribbon			0

O: Good match

7.4 Care/Handling of Media and Ribbon

CAUTION!

Be sure to carefully review and understand the Supply Manual. Use only media and ribbons that meet specified requirements. Use of non-specified media and ribbons may shorten the head life and result in problems with bar code readability or print quality. All media and ribbons should be handled with care to avoid any damage to the media, ribbons or printer. Read the guidelines in this section carefully.

- Do not store the media or ribbon for longer than the manufacturer's recommended shelf life.
- Store media rolls on the flat end. Do not store them on the curved sides as this might flatten that side causing erratic media advance and poor print quality.
- Store the media in plastic bags and always reseal after opening. Unprotected media can get dirty and the extra abrasion from the dust and dirt particles will shorten the print head life.
- Store the media and ribbon in a cool, dry place. Avoid areas where they would be exposed to direct sunlight, high temperature, high humidity, dust or gas.
- The thermal paper used for direct thermal printing must not have specifications which exceed Na⁺ 800 ppm, K⁺ 250 ppm and Cl⁻ 500 ppm.
- Some ink used on pre-printed media may contain ingredients which shorten the print head's product life. Do not use labels pre-printed with ink which contain hard substances such as carbonic calcium (CaCO₃) and kaolin (Al₂O₃, 2SiO₂, 2H₂O).

For further information, please contact your local distributor or your media and ribbon manufacturers.

APPENDIX 1 MESSAGES AND LEDS

Appendix 1 describes the LCD messages displayed on the operation panel.

Symbols in the message

- 1: O: The LED is illuminated. ⊙: The LED is flashing. ●: The LED is unlit.
- 2: %%,%%%,%%%: Remaining memory size of the external memory: 0 to 09,999,999 (in K bytes)
- 3: ####: Remaining memory size for PC commands storage area in the internal memory: 0 to 3072 (in K bytes)
- 4: &&&: Remaining memory size for writable characters storage area: 0 to 3147 (in K bytes)

No.	LCD Message	LED In	dication	Printer Status	Restoration by RESTART key	Acceptance of Status Request/ Reset Command
		ONLINE	ERROR		Yes/No	Yes/No
	ON LINE	Ο	•	In online mode		Yes
1	ON LINE	٥	•	In online mode (The printer is communicating)		Yes
2	HEAD OPEN	•	•	The print head block is open in online mode.		Yes
3	PAUSE	•	•	The printer is paused.	Yes	Yes
4	COMMS ERROR	•	o	A parity, overrun, or framing error has occurred during communication through the RS-232C.	Yes	Yes
5	PAPER JAM	•	ο	The media has jammed during paper feed.	Yes	Yes
6	CUTTER ERROR	•	Ο	A problem has occurred with the cutter module.	Yes	Yes
7	NO PAPER	•	О	The media has run out, or the media is not loaded properly.	Yes	Yes
8	NO RIBBON	•	Ο	The ribbon has run out.	Yes	Yes
9	HEAD OPEN	•	О	Feed or printing was attempted with the print head block open.	Yes	Yes
10	HEAD ERROR	•	Ο	There is a problem with the print head.	Yes	Yes
11	EXCESS HEAD TEMP	•	Ο	The print head has overheated.	No	Yes
12	RIBBON ERROR	•	0	The ribbon has been torn. A problem has occurred with the sensor that determines the torque for the ribbon motor.	Yes	Yes
13	REWIND FULL	•	Ο	The internal rewind unit is full.	Yes	Yes
14	SAVING####KB/&&&&KB or SAVING%,%%%,%%%KB	o	•	Writable character or PC command save mode		Yes
15	FORMAT####KB/&&&&KB or FORMAT%,%%%.%%%KB	o	•	The storage area is being initialized.		Yes
16	NOW LOADING	О	•	TrueType font or BASIC program is being downloaded.		Yes
17	MEMORY WRITE ERR.	•	0	An error has occurred while writing to flash memory or USB memory.	No	Yes
18	FORMAT ERROR	•	0	An erase error has occurred while formatting the flash memory or USB memory.	No	Yes
19	MEMORY FULL	•	Ο	Data cannot be stored because the flash memory or USB memory is full.	No	Yes
20	SYNTAX ERROR (Refer to "Notes")	•	Ο	A command error has occurred while analyzing the command.	Yes	Yes
21	POWER FAILURE	•	0	A power failure has occurred.	No	No

APPENDIX 1 MESSAGES AND LEDS

No.	LCD Message	LED In	dication	Printer Status	Restoration by RESTART key	Acceptance of Status Request/ Reset Command
	C	ONLINE	ERROR		Yes/No	Yes/No
22	EEPROM ERROR	•	0	Data cannot be read from/written to a backup EEPROM properly	No	No
23	SYSTEM ERROR	•	О	 When the following abnormal operations are performed, a system error occurs: (a) Command fetch from an incorrect address. (b) Access to word data at an incorrect address. (c) Access to long-word data at an incorrect address. (d) Access to the area of 80000000H to FFFFFFFFH in the logic space in user mode. (e) An undefined instruction in an area other than a delay slot was decoded. (f) An undefined instruction in a delay slot was decoded. (g) An instruction to rewrite a delay slot was decoded. 	No	No
24	DHCP CLIENT INIT	●	●	DHCP Client is being initialised. (Only when the DHCP is enabled.)		
25	RFID WRITE ERROR	•	0	The printer did not succeed in writing data onto an RFID tag after having retried the specified number of times.	Yes	Yes
26	RFID ERROR	•	0	The printer cannot communicate with the RFID module.	No	Yes
27	INPUT PASSWORD	•	•	The printer is waiting for a password to be entered.	No	No
28	PASSWORD INVALID	•	•	A wrong password was entered three consecutive times.	No	No
29	RFID CONFIG ERROR	•	0	B-EX700-RFID-U2-EU/US-R, B-EX700-RFID-U4-EU/US-R, U4 Module preinstall model only RFID Module's destination code is not specified.	No	No
30	LOW BATTERY (Refer to Notes)	•	0	RTC Battery is low.	No	Yes
31	INTERNAL COM ERR	•	•	A hardware error has occurred in the internal serial interface.	No	No

NOTE: When an error message listed above appears on the LCD display please refer to Section 5 *TROUBLESHOOTING* for a solution.

APPENDIX1 MESSAGES AND LEDS

NOTES:

• If an error is found in a command received, up to 42 bytes of the erroneous command, starting from the command code, will be displayed. (However, [LF] and [NUL] will not be displayed.) (TO DO) Û SYNTAX ERROR {D1544,1042,1524|}{C {PC000;0025,B=AC 们还常困解 Help▶ Example 1 [ESC]PC001;0A00,0300,2,2,A,00,B[LF][NUL] Command error The following message appears. SYNTAX ERROR PC001;0A00,0300,2,2,A, 00.B Example 2 [ESC]T20<u>G</u>30[LF] [NUL] — Command error The following message appears. SYNTAX ERROR T20G30 Example 3 [ESC]PC002;0100,0300,15,15,A,00,00,J0101,+000000000A,Z10,P1[LF] [NUL] Command error The following message appears. SYNTAX ERROR PC002;0100,0300,15,15, A,00,00,J0101,+00000 • When the error is shown, "? (3FH)" appears for character codes other than 20H to 7FH and A0H to DFH. • For details, please refer to the B-EX4/EX6 Series External Equipment Interface Specification.

NOTES:

- The battery check does not work when the printer is being reset and the RTC is not mounted.
- It is necessary to follow the procedure below to use RTC function under a low battery condition.
- Turn off the printer power while the printer is in an error state. Start the printer in the system mode, set the date and time for the RTC again, then reset the printer to place the printer in online state.
- * The printer can print the programmed date and time until it is turned off.

APPENDIX 2 INTERFACE

NOTE:

To prevent radiation and reception of electrical noise, the interface cables must meet the following requirements:

In case of a parallel interface cable or serial interface cable, fully shielded and fitted with metal or metallised connector housings.

Keep as short as possible. Should not be bundled tightly with power cords. Should not be tied to power line conduits.

■ USB interface (Standard)

Physical Layer:	Conforming to V2.0 Full speed
Transfer type:	Control transfer, Bulk transfer
Transfer rate:	Full speed (12M bps)
Class:	Printer class
Number of ports:	1
Power source:	Self power
Connector:	Type B

■ LAN (Standard)

Physical Layer:	IEEE802.3 10BASE-T/100BASE-TX
Number of ports:	1
Connector:	RJ-45
LED status:	Link LED, Activity LED

Link LED (Green)

LED	LED Status	LAN status
Link	ON	10Mbps link or 100Mbps link is detected.
	OFF	No link is detected.
		* Communication cannot be made while the
		Link LED is off.
Activity	ON	Communicating
	OFF	Idle

LAN cable:	10BASE-T: UTP category 3 or category 5
	100BASE-TX: UTP category 5
Cable length:	Segment length Max. 100 m

NOTE:

When a generally-used twisted pair Ethernet (TPE) or UTP cable is used, communication errors may occur subject to your operating environment. In such a case, please use a shielded twisted pair cable.

■ Serial interface (Option: B-EX700-RS-QM-R)

Type:	RS-232C					
Communication mode:	Full duplex	Full duplex				
Transmission speed:	2400 bps, 4	800 bps, 9600 bps, 19200 bps, 3	8400 bps, 115200 bps			
Synchronization:	Start-stop s	ynchronization				
Start bit:	1 bit					
Stop bit	1 bit, 2 bit					
Data length:	7 bit, 8 bit	7 bit, 8 bit				
Parity:	None, EVEN, ODD					
Error detection:	Parity error, Framing error, Overrun error					
Protocol:	Unprocedure communication					
Data input code:	ASCII cod	e, European character 8 bit code	e, graphic 8 bit code, JIS8 code, Shift JIS			
	Kanji code	, JIS Kanji code				
Receive buffer:	1M byte	-				
Connector:						
	Pin No.	Signal				
	1	NC				

Pin No.	Signal
1	N.C
2	TXD (Transmit Data)
3	RXD (Received Data)
4	DSR (Data Set Ready)
5	SG (Signal Ground)
6	DTR (Data Terminal Ready)
7	CTS (Clear to Send)
8	RTS (Request to Send)
9	N.C

■ Parallel interface (Centronics) (Option: B-EX700-CEN-QM-R)

Mode:	Conforming to IEEE1284
	(1,,,,,,,, .

Compatible mode (SPP mode), Nibble mode

Data input method: 8 bit parallel

Control signal:

SPP Mode	Nibble Mode	ECP Mode
nStrobe	HostClk	HostClk
nAck	PtrClk	PeriphClk
Busy	PtrBusy	PeriphAck
Perror	AckDataReq	NAckReverse
Select	Xflag	Xflag
nAutoFd	HostBusy	HostAck
nInit	nInit	nReverseRequest
nFault	nDataAvail	nPeriphRequest
nSelectIn	IEEE1284Active	IEEE1284Active

Data input code: ASCII code European 8 bit code

	Luiopeun o bit coue
	Graphic 8 bit code
	JIS8 code
	Shift JIS Kanji code
	JIS Kanji code
Receive buffer:	1MB

Connector:

■ Wireless LAN (Option: B-EX700-WLAN2-QM-R)

Standard:	Conforming to IEEE802.11b, and IEEE802.11g, and IEEE802.11n
Client protocol:	TCP/IP, Socket, LPR, DHCP, HTTP
Print protocol:	Socket communication/LPR
Security protocol:	WEP(64 bits) or WPA, WPA2
EAP method:	EAP-TLS, PEAP, EAP-TTLS, EAP-FAST
Antenna:	Built-in
Parameter setting:	via USB, LAN, WLAN, RS-232C
Default IP address:	192.168.10.20
Default subnet mask:	255.255.255.0

NOTE:

MAC address of the Wireless LAN module will be necessary when setting the MAC address filtering function of an access point. Please ask a service person of your nearest TOSHIBA TEC service representative.

APPENDIX 4 GLOSSARIES

Barcode

A code which represents alphanumeric characters by using a series of black and white stripes of different widths. Reading barcodes is a fast and accurate means of capturing data.

Batch mode

An issue mode that continuously prints until the specified number has been printed.

Black mark

A black mark printed on the media so that the printer can maintain a consistent print position by detecting this mark.

Black mark sensor

A reflective sensor that detects the difference of potential between the black mark and print area to find the print start position.

Cut mode

A printer mode where an optional cutter module is installed to automatically cut media from the supply roll after they are printed. The print command can specify to cut after every print or to cut after a set number of prints.

Cutter module

A device used to cut the media.

DHCP

Dynamic Host Configuration Protocol A communications protocol that allocates an IP address to a computer plugged into a network.

DPI

Dots Per Inch The unit used to express print density.

Expansion I/O interface

An interface circuit that may be installed to allow the printer to be connected to an external device such as a wrapping machine. It can receive feed, print start, and pause signals from the external device and to send back print, pause, and error status signals to the external device.

Feed gap sensor

A transmissive sensor that detects the difference of potential between the gap between labels and the label to find the print start position.

Font

A complete set of alphanumeric characters in one style of type. E.g. Helvetica, Courier, Times

Gap

Gap between labels on a backing material

IPS

Inch per second The unit used to express print speed.

Label

A type of media with adhesive backing.

LCD

Liquid Crystal Display

Installed on the operation panel and displays operation modes, error message etc.

Media

Material on which data is printed by the printer. Labels, tag paper, fanfold paper, perforated paper etc.

Plug and Play

When Plug and Play is enabled, the PC will automatically identify the printer (if the PC supports Plug & Play), optimise the system resource (IRQ and DMA), and display a message prompting a printer driver installation.

Pre-printed media

A type of media on which characters, logos, and other designs have been already printed.

Printer IP address

A 32-bit address of a printer connected to TCP/IP network, which identifies the printer. An IP address is written as 4 sets of numbers, separated by full stops. For example 192.168.10.20.

Print head element

The thermal print head consists of a single line of tiny resistive elements. When current is allowed to flow through each element it heats up causing a small dot to be burned onto thermal paper or a small dot of ink to be transferred from a thermal ribbon.

Print speed

The speed at which printing occurs. This speed is expressed in units of IPS (inches per second).

Reflective sensor

See Black mark sensor.

Resolution

The number of individual dots a printer can produce within a unit of distance. Printer resolution measured in Dots per Inch. As the number of dots per inch increases, the resolution increases, resulting in a more detailed image.

RFID (Radio Frequency Identification)

RFID is a technology that uses radio waves to exchange data between a reader and an electronic tag. The tag can be encapsulating inside a label which can also be printed on. RFID is very useful for object identification and tracking.

Ribbon

An inked film used to transfer an image or text onto media. In thermal transfer printing, it is heated by the print head, causing an image to be transferred onto the media.

Strip mode

The printer removes labels from the backing paper. After each issue the printer stops until the label is removed. Once the label is removed the next label will be issued and so on.

Supplies

Media and ribbon

Tag

A type of media with no adhesive, usually made from cardboard or other durable material.

Thermal direct printing

A printing method using no ribbon and thermal media which reacts to heat. The print head makes direct contact with the media producing text or images.

Thermal print head

A print head using thermal transfer or thermal direct printing method.

Thermal transfer printing

A printing method where the thermal print head heats an ink or resin coated ribbon against the media. The ink/resin is then transferred onto the media.

Threshold setting

A sensor setting that allows the printer to maintain a consistent print position of pre-printed media.

Transmissive sensor

See Feed gap sensor.

USB (Universal Serial Bus)

An interface that is used to connect peripherals, such as a printer, keyboard, mouse to computer or host. The USB port may allow disconnection of a USB device without turning off the power.

Web printer

The web printer function allows you to browse the printer status on the PC, issue media, check or change the settings, or download firmware to the printer. For details, refer to the **Network Specification**.
