Engine Control Module (ECM), Diagnostic Trouble Code (DTC), Guide 2010 Emissions

CHU, CXU, GU, TD

PV776-88961816

Foreword

The descriptions and service procedures contained in this manual are based on designs and methods studies carried out up to March 2010.

The products are under continuous development. Vehicles and components produced after the above date may therefore have different specifications and repair methods. When this is believed to have a significant bearing on this manual, supplementary service bulletins will be issued to cover the changes.

The new edition of this manual will update the changes.

In service procedures where the title incorporates an operation number, this is a reference to a Labor Code (Standard Time).

Service procedures which do not include an operation number in the title are for general information and no reference is made to a Labor Code (Standard Time).

Each section of this manual contains specific safety information and warnings which must be reviewed before performing any procedure. If a printed copy of a procedure is made, be sure to also make a printed copy of the safety information and warnings that relate to that procedure. The following levels of observations, cautions and warnings are used in this Service Documentation:

Note: Indicates a procedure, practice, or condition that must be followed in order to have the vehicle or component function in the manner intended.

Caution: Indicates an unsafe practice where damage to the product could occur.

Warning: Indicates an unsafe practice where personal injury or severe damage to the product could occur.

Danger: Indicates an unsafe practice where serious personal injury or death could occur.

Design and Function

Engine Control Module (ECM)

The manufacturer scan tool is the preferred tool for performing diagnostic work. Contact your local dealer for more information or visit "www.premiumtechtool.com".

System Overview

Six electronic control units (ECUs) are used; the engine control module (ECM), instrument control module (ICM), Vehicle Electronic Control Unit (VECU), transmission control module (TCM), the gear selector control module (GSCM) and the aftertreatment control module (ACM). Together, these modules operate and communicate through the SAE J1939 (CAN 1) data link to control a variety of engine and vehicle cab functions. The ECM controls such things as fuel timing and delivery, fan operation, engine protection functions, engine brake operation, the exhaust gas recirculation (EGR) valve and the turbocharger nozzle. The VECU controls cruise control functions, accessory relay controls and idle shutdown functions. The ICM primarily displays operational parameters and communicates these to the other ECUs. All have the capability to communicate over the SAE J1587 data link primarily for programming, diagnostics and data reporting.

In addition to their control functions, the modules have on board diagnostic (OBD) capabilities. The OBD is designed to detect faults or abnormal conditions that are not within normal operating parameters. When the system detects a fault or abnormal condition, the fault will be logged in one or both of the modules' memory, the vehicle operator will be advised that a fault has occurred by illumination a malfunction indicator lamp (MIL) and a message in the driver information display, if equipped. The module may initiate the engine shutdown procedure if the system determines that the fault could damage the engine.

In some situations when a fault is detected, the system will enter a "derate" mode. The derate mode allows continued vehicle operation but the system may substitute a sensor or signal value that may result in reduced performance. In some instances, the system will continue to function but engine power may be limited to protect the engine and vehicle. Diagnostic trouble codes (DTCs) logged in the system memory can later be read, to aid in diagnosing the problem using a diagnostic computer or through the instrument cluster display, if equipped. When diagnosing an intermittent DTC or condition, it may be necessary to use a scan tool connected to the Serial Communication Port. **Note:** The use of a scan tool is necessary to perform diagnostic work as well as clearing of any diagnostic trouble codes (DTCs). DTC(s) can no longer be cleared using the vehicles instrument cluster digital display and stalk switch control.

The use of a scan tool is necessary to perform diagnostic work as well as clearing of any diagnostic trouble codes (DTCs). DTC(s) can no longer be cleared using the vehicles instrument cluster digital display and stalk switch control. Additional data and diagnostic tests are available when a scan tool is connected to the Serial Communication Port.

For diagnostic software, contact your local dealer.

The ECM is a microprocessor based controller programmed to perform fuel injection quantity and timing control, diagnostic fault logging, and to broadcast data to other ECUs. The fuel quantity and injection timing to each cylinder is precisely controlled to obtain optimal fuel economy and reduced exhaust emissions in all driving situations.

The ECM controls the operation of the injectors, engine brake solenoid, EGR valve, turbocharger nozzle position, and cooling fan clutch based on inputs from many sensors and information received over the data links from other ECUs.

The VECU and ECM are dependent on each other to perform their specific control functions. In addition to switch and sensor data, the broadcast of data between modules also includes various calculations and conclusions that each module has developed, based on the input information it has received.

On Board Diagnostic (OBD) Monitors

System Electronic Control Unit (ECU) Overview

The engine control module (ECM) monitors and models (using physical principles) engine parameters to monitor the engine system's performance in real time. This is performed to aid the ECM with its self diagnostic capabilities. Many sensors are used for input to the emission control system.

The system contains the following "emission critical" ECUs that are monitored;

- Engine Control Module (ECM)
- Vehicle Electronic Control Unit (VECU)
- Aftertreatment Control Module (ACM)
- Aftertreatment Nitrogen Oxides (NOx) Sensors
- Engine Variable Geometry Turbocharger (VGT) Smart Remote Actuator (SRA)

These ECUs all communicate with the ECM via data links. The VECU communicates across the SAE J1939 (CAN1) data link while the others use the SAE J1939-7 (CAN2) data link. The OBD systems use SAE J1939 data link protocol for communication with scan tools but, MACK trucks still are capable of communicating via the SAE J1587 data link for diagnostics. The use of a scan tool is necessary to perform diagnostic work as well as clearing of any diagnostic trouble codes (DTCs). DTC(s) can no longer be cleared using the vehicles instrument cluster digital display and stalk switch control.

There are other ECUs such as the Instrument Control Module (ICM), Transmission Control Module (TCM) and Anti-lock Brake System (ABS) Module that provide data to the emission control system or the diagnostic system but are not "emission critical".

Malfunction Indicator Lamp (MIL), Description and Location

A MIL located in the instrument cluster. This amber colored lamp is used to inform the driver that a "emission critical" malfunction signal has occurred.

Accelerator Pedal Position (APP) Sensor, Overview

The APP sensor input is an analog voltage signal proportional to the pedal position that is read by the vehicle electronic control unit (VECU). The angular position of the pedal is divided in three different areas used for fault detection and/or recovery. The value that is transmitted under normal

Active/intrusive Injection (Aftertreatment Hydrocarbon Doser Clogging)

This diagnostic is based on the checking the aftertreatment diesel particulate filter (DPF) intake temperature during aftertreatment DPF active parked regeneration cycles. If the aftertreatment DPF intake temperature does not reach a

Aftertreatment Diesel Exhaust Fluid (DEF) Feedback Control

The aftertreatment DEF control consists of a feedforward control together with a feedback control. The feedforward control value is how much urea that must be injected in order

Aftertreatment Diesel Exhaust Fluid (DEF) Quality

Aftertreatment DEF quality is evaluated and determined through conversion efficiency. If the aftertreatment SCR system efficiency is below the specified limit, a fault is reported.

Aftertreatment Diesel Particulate Filter (DPF)

The aftertreatment DPF collects particulate and soot in a ceramic wall-flow substrate. The strategy to manage the accumulation of soot is to take advantage of natural aftertreatment DPF passive regeneration whenever possible,

Aftertreatment Diesel Particulate Filter (DPF) Regeneration Frequency

This function detects if the aftertreatment DPF regeneration frequency increases to a level that it would cause the non-methane hydro carbon (NMHC) emissions to exceed the legal limitation or if the frequency exceeds the design

Aftertreatment Diesel Particulate Filter (DPF) Incomplete Regeneration

The aftertreatment DPF regeneration strategy is to reduce the soot level in the DPF using passive regeneration. However, if the driving conditions do not enable enough exhaust heat for passive regeneration to keep up with the soot loading an active parked aftertreatment DPF regeneration will be required.

Aftertreatment Diesel Particulate Filter (DPF) Regeneration Feedback Control

This function monitors the particulate matter regeneration feedback control and detects:

- If the system fails to begin feedback control
- If a failure or deterioration causes open loop
- If the feedback control has used up all of the allowed adjustment

When the aftertreatment hydrocarbon doser is used, the feedback control is monitored for a saturated controller or a saturated actuator. A saturated controller or actuator means that all allowed adjustment has been used up. The monitors detect a malfunction if the controller is saturated more than a given percentage of the time and the target temperature can conditions (value of 0 - 100%), is directly proportional to the pedal's angular position. The physical accelerator assembly also supports a digital DC voltage (On/Off) generated by an idle validation (IV) switch that is also powered by the same regulated reference voltage source.

minimum regeneration temperature within a specified time then the aftertreatment hydrocarbon doser is considered to be clogged.

to obtain the demanded nitrogen oxides (NOx) conversion efficiency. The feedback controls the ammonia (NH3) buffer in the aftertreatment selective catalytic reduction (SCR).

and to invoke an operating mode that enhances aftertreatment DPF passive regeneration when necessary. Aftertreatment DPF active regeneration is performed using an aftertreatment hydrocarbon doser.

requirements. If the number of aftertreatment DPF regenerations are above the threshold at the end of the time period a fault is reported.

An interrupted parked aftertreatement DPF regeneration is detected by this function. This is not a fault mode but handled by the aftertreatment system. If the ratio between the uncompleted and completed regenerations is above the specified limit, a fault is reported.

not be reached or if the actuator is saturated more than a given percentage of the time.

Aftertreatment Fuel System, Rationality Monitors

The aftertreatment fuel system consists of a aftertreatment fuel shutoff valve, a separate aftertreatment hydrocarbon doser (injector), and an aftertreatment fuel pressure sensor. The aftertreatment fuel shutoff valve diagnostic function look at the aftertreatment fuel pressure when the valve is opened and closed. When conditions are proper for the diagnostic, the function requests an opening of the aftertreatment fuel shutoff valve in order to pressurize the aftertreatment fuel system.

Aftertreatment Non-Methane Hydro Carbons (NMHC) Catalyst

To detect when the hydrocarbon conversion fails in the aftertreatment diesel oxidation catalyst (DOC), the temperature reaction at the aftertreatment DOC outlet is monitored when fuel is injected in the exhaust. The amount of hydrocarbon supplied by the aftertreatment hydrocarbon doser will determine the expected increase in temperature after the aftertreatment DOC. The aftertreatment hydrocarbon doser

Aftertreatment Nitrogen Oxides (NOx) Sensor(s) Overview

The NOx sensors consist of:

- Housing holding the sensing element.
- An electronic control unit (ECU), interfacing the sensor and the engine control module (ECM).
- A wire, electrically connecting the sensing element with the ECU.

There are two aftertreatment NOx sensors, one before and one after the aftertreatment selective catalytic reduction (SCR) catalyst. The aftertreatment NOx sensor before and after SCR catalyst have unique CAN identification numbers hence can not be swapped. The sensor before the SCR catalyst monitors the engine out NOx level. The sensor after SCR monitors system out NOx level.

Aftertreatment Selective Catalytic Reduction (SCR)

The aftertreatment SCR system is a catalyst system that is used to reduce exhaust Nitrogen Oxides (NOx) emissions. This reduction is performed by injecting diesel exhaust fluid (DEF) (a urea solution) into the exhaust fumes prior to the aftertreatment SCR catalyst. A chemical process performed by aftertreatment SCR catalyst and DEF, converts NOx to

Aftertreatment Selective Catalytic Reduction (SCR) Conversion Efficiency

The aftertreatment SCR catalyst diagnosis calculates the low temperature performance of the aftertreatment SCR system and compares it to the performance when the catalyst is warm enough to reach high nitrogen oxides (NOx) conversion.

Ambient Air Temperature (AAT) Sensor, Overview

The AAT sensor is an analog input that is read by the instrument cluster electronic control unit. The instrument cluster processes the raw signal and transmits the AAT value on the SAE J1939 data link. The vehicle electronic control unit (VECU) receives the AAT value and based on certain vehicle conditions the value is adjusted. The VECU then transmits

This action should increase system pressure. When the aftertreatment fuel shutoff valve is closed the system pressure should decrease since the valve has an internal drain pipe that constantly depressurizes the system. For more information about these components refer to "Aftertreatment Fuel Pressure Sensor, Circuit Monitors", page 16, "Aftertreatment Fuel Shutoff Valve, Circuit Monitors", page 16 or "Aftertreatment Hydrocarbon Doser, Circuit Monitors", page 16.

injection rate (duty cycle) is monitored and used to calculate whether there should be a corresponding heat reaction. Once it has reached an acceptable accumulated duty cycle the expected temperature difference can be calculated. This difference should then be above a certain limit if the hydrocarbon conversion was achieved.

Aftertreatment NOx sensor diagnostics monitor the sensors signal quality and performance. The purpose of this function is to detect the following,

- Bad signal quality
- Removed sensor
- Missing signal

Circuit integrity of the aftertreatment NOx sensor is checked by the sensor itself and the status is transmitted to the engine control module (ECM) over the CAN data link. The following can be transmitted,

- open circuit
- high voltage
- circuit low or high

nitrogen oxide (NO) and water (H2O). The aftertreatment control module (ACM) is used to control the aftertreatment SCR components and relays system information to the Engine Control Module (ECM). The ECM controls the overall system function.

This is based on the premise that a deteriorated catalyst can be considered as a catalyst with less volume. The volume is critical to reach the low temperature performance of the aftertreatment SCR system.

the AAT value back on the SAE J1939 data link where it is received by the engine control module (ECM).

Charge Air Cooler (CAC)

The nominal CAC efficiency is a map based on mass air flow (MAF) and ambient air temperature (AAT). The method to evaluate the CAC efficiency is to compare a nominal CAC

Combined Monitoring

Cylinder balancing function is used to detect fuel system pressure, quantity and timing fault. By processing the tooth times cylinder balancing detects if the combustion power contribution from one or several cylinders is too week or too strong and need to be compensated to get even combustion

Crankcase Ventilation

The crankcase pressure (CCP) depends on the blow-by flow and the under pressure generated by the separator. Blow-by gases come mainly from the combustion when exhaust gas passes the piston rings. A malfunctioning of the valve guides,

Crankcase Ventilation Diagnostic Function

When the high speed separator enabling conditions exist, the minimum value of the difference between crankcase and barometric pressure (BARO) during a time period is stored.

Engine Control Module (ECM), Rationality Monitors

If electrical power to the ECM is lost or very low, the ECM will stop to functioning and the engine will stop. Other electronic

Engine Coolant Temperature (ECT) Sensor Overview

The ECT sensor is monitored for rationality at key **ON** by comparing the ECT with the other engine temperature sensors (engine oil temperature (EOT) and engine turbocharger compressor outlet temperature). Using this comparison the following conclusions may be made when a problem occurs:

- Unable to reach Closed loop/Feedback enable Temperature (covered by thermostat warmed up temperature)
- Time to reach Closed loop/Feedback enable Temperature (covered by thermostat warmed up temperature)

Exhaust Gas Recirculation (EGR)

US2010 emission level MACK engines use EGR to enhance engine out Nitrogen Oxides (NOx) control. EGR flow is managed using an EGR valve and a Variable Geometry Turbocharger (VGT) nozzle position. These actuator settings are based on open loop settings established to achieve

Exhaust Gas Recirculation (EGR) Low Flow

This function monitors the reduction of EGR flow in the EGR system, i.e. too low EGR mass flow compared with demand. It is activated when the engine enters the burned fraction mode

Exhaust Gas Recirculation (EGR) High Flow

This function diagnoses too much EGR in the system, i.e. too high EGR mass flow compared with the demand. This function handles positive deviations when EGR closed loop control is active. When closed loop EGR control is entered, an initial difference between measured burned fraction and burned efficiency with one calculated based on the exhaust gas recirculation (EGR) and the intake air temperature (IAT) sensor along with their corresponding mass flows.

power from all cylinders. The compensation is calculated at the lower engine speed (RPM) and torque regions during warm engine where the impact from each combustion becomes most visible. If the compensation becomes too high or too low fault is detected.

or the turbocharger can also contribute. The blow-by gases consist of exhaust gases mixed with oil. A high speed rotating separator is used to expel engine oil from these gases.

The system performs high speed and low speed evaluations of the separator to conclude if the system is tight.

control units (ECUs) on the SAE J1939 (CAN1) data link will indicate that data from the ECU is missing.

- Stuck in a range below the highest minimum Enable temperature
- Stuck in a Range Above the Lowest maximum Enable temperature Rationality Check

When the engine is used, the three temperatures are not the same and depending on how fast the engine is restarted normal differences will be found. When these differences and the ambient air temperature (AAT) exceeds a limit, the fault limits are adjusted in order to allow these differences.

desired burned fraction rates. These settings can be modified in a closed loop burned fraction mode by feedback from a combustion property model. The EGR system is diagnosed by monitoring the burned fraction whenever the engine enters burned fraction closed loop mode.

with minimum demand for BF and the engine speed/torque is in a range where EGR flow measurements and BF calculations have sufficient accuracy.

fraction demand might exist. Due to the fact that some time is needed for adaptation, not all the difference is taken into account.

Exhaust Gas Recirculation (EGR) Slow Response

As described in "Exhaust Gas Recirculation (EGR) Low Flow", page 8 and "Exhaust Gas Recirculation (EGR) High Flow", page 8, the deviation between the demanded and measured

Exhaust Gas Recirculation (EGR) Feedback Control

This function detects:

• If any of the feedback control loops are not achieved.

Exhaust Gas Recirculation (EGR) Cooler Performance

This function uses an equation based off of engine turbocharger turbine intake temperature, EGR temperature and the engine coolant temperature (ECT), to calculate cooler

Exotherm

Exotherm, exothermic or exothermal all refer to a chemical change that is accompanied by a great release of heat. The aftertreatment heating function uses the aftertreatment hydrocarbon doser, to heat up the exhaust system for parked aftertreatment diesel particulate filter (DPF) regeneration. When the aftertreatment hydrocarbon doser is used the hydrocarbons (HC) create an exotherm in the aftertreatment

Filtering Performance

A malfunction of the aftertreatment diesel particulate filter (DPF) can be detected by analysing the pressure drop over the aftertreatment DPF. During the aftertreatment DPF evaluation,

Fuel System

The D13L engine uses a unit injector system (as opposed to a rail injector system) to inject fuel in the cylinders. The unit injectors are not equipped with any pressure sensors and therefore it is not possible to measure fuel pressure. Diagnostics of the fuel injection system is done using the

Idle Speed, Rationality Monitors

The target idle engine speed (RPM) and fuel injection quantity are monitored in the idle control system. The diagnosis monitors compare the measured engine speed (RPM) (averaged over each engine cycle) and target idle engine speed (RPM). The accumulated difference is averaged over a number of revolutions. If the averaged difference is above or

Intake Manifold Pressure (IMP) Control System

A IMP sensor located in the intake manifold is used to measure IMP. The IMP system is monitored by comparing target/estimated IMP with actual measured pressure during certain engine speed (RPM) or load.

The target/estimated IMP is continuously calculated based on engine speed and fuel angle and adjusted for the influence of variable geometry turbocharger (VGT) nozzle position, exhaust gas recirculation (EGR) position and barometric pressure (BARO). burned fraction are monitored when EGR closed loop control is active. Slow response is detected when the deviation (high/low) above the threshold is detected.

If feedback control mode is inhibited.

efficiency. The calculated efficiency is deemed too low if it is below a certain constant limit.

diesel oxidation catalyst (DOC). The aftertreatment hydrocarbon doser injection rate (duty cycle) is monitored and used to calculate whether there should be a corresponding exotherm. A starting temperature value is set when the aftertreatment hydrocarbon doser starts to inject fuel. As soon as the model says that exotherm should occur, the difference is calculated to identify whether it has occurred.

the lower and upper limiting values of the measured pressure drop are calculated. If the pressure drop is lower or higher than expected a fault indication occurs.

crankshaft position (CKP) sensor. The flywheel of the engine has slots machined at 6 degree intervals around its circumference. Three gaps where two slots are missing, are equally spaced around its circumference also. The three gaps are used to identify the next cylinder in firing order.

below the defined fault limits, diagnostic trouble codes (DTCs) will be set for high fault and for low fault, respectively. The same holds true for the fuel quantity. The accumulated fuel value is averaged over a number of revolutions. If the averaged difference is above, DTCs will be set for high fault.

Misfire

The misfire monitor is disabled during Power Take Off (PTO) operation. It is active during positive brake torque, idle, and high idle. Engine misfire events are monitored by measuring tooth times on the crank wheel that indicates combustion acceleration in each cylinder. It is also possible to compare the previous acceleration contribution on each cylinder in order to examine if there has been a misfire or not.

Missing Substrate

The aftertreatment diesel particulate filter (DPF) is backpressure monitored. This monitoring is used to determine

Over-boost

If the measured intake manifold pressure (IMP) is over the deviation upper limit then the high boost average calculation is positive. If the measured IMP is below the deviation upper limit

Parking Brake Switch, Overview

The parking brake switch is a pressure switch that is physically connected to the vehicle's parking brake pneumatic circuit and is used to determine if the parking brake is applied or released. The parking brake switch signal is received by the vehicle electronic control unit (VECU). When the vehicle's parking

Power Take-off (PTO) Enable Switch, Overview

The PTO enable switch is an input that is read by the vehicle electronic control unit (VECU). When 12V is applied to the input the VECU acknowledges the PTO function is being

SAE J1939 (CAN1) Data Link, Overview

Communication between the electronic control units (ECUs) is performed via the vehicle's SAE J1939 (CAN1) data link and is accessible for diagnostics through the vehicle's SAE J1939-13 data link connector (DLC). This data link is the main powertrain communication bus.

Thermostat Monitor

This feature monitors and compares the engine coolant temperature (ECT), engine speed (RPM), engine torque, fan

Time/Date Overview

The time and date is calculated from an internal clock within the instrument cluster. The internal clock is backed up by an internal battery therefore the time and date is retained even when vehicle battery supply to the instrument cluster is

Variable Geometry Turbocharger (VGT) Feedback Control

This function detects:

If any of the feedback control loops are not achieved.

If feedback control mode is inhibited.

If the actuators have used up all the adjustment allowed when in feedback mode.

After monitoring misfire events during idle conditions for the accumulation of less than 15 seconds, the percentage of misfire is evaluated. If the percentage of misfire exceeds the threshold limit, the misfire diagnostic trouble code (DTC) will be set for the fault.

whether the aftertreatment DPF is either clogged, missing or significantly cracked.

then the high boost integration is negative. If the integrated value exceeds the maximum limit a fault for high IMP is set.

brake is applied a ground signal is applied to the input and the VECU acknowledges the parking brake as being applied. The parking brake switch signal is provided to the engine control module (ECM) via the SAE J1939 data link.

commanded on. The PTO Enable switch signal is provided to the engine control module (ECM) from the VECU by via the SAE J1939 data link.

Diagnostic trouble codes (DTCs) are set for this data link when an ECU is found to not be communicating or recognized on the data link (off bus mode) or when there is an abnormal rate of occurrence of errors on the data link.

speed and ambient air temperature (AAT) to conclude when the thermostat may be stuck open or closed.

removed. The time and date signal is provided to the engine control module (ECM) from the instrument cluster via the SAE J1939 data link.

Vehicle Speed Sensor (VSS), Overview

The vehicle road speed is calculated by the vehicle electronic control unit (VECU). The source for calculating vehicle road speed can be derived from multiple sources depending on vehicle equipment. Some trucks may use a dedicated speed

Under-boost

If the measured intake manifold pressure (IMP) is less than the deviation lower limit then the low boost average calculation is negative. If the measured IMP is above the deviation lower

Variable Geometry Turbocharger (VGT) Slow Response

The VGT actuator reports a fault to the engine control module (ECM) when it has detected that the VGT nozzle is not moving, or if it has not been able to close the set-point error to acceptable limits.

sensor (which may be inductive or hall effect type) and some may use the transmission output shaft speed (OSS) sensor signal which is communicated across the SAE J1939 data link.

limit then the low boost integration is positive. If the integrated value becomes less than the minimum limit a fault for low IMP is set.

Group 28

Accelerator Pedal Position (APP) Sensor, Circuit Monitors

Both signals are continuously monitored (sampled) by the vehicle electronic control unit (VECU) at 50 ms intervals to detect any distortion or disruption of these signals. Signals detected as invalid for a period extending over 500 ms trigger active faults that are broadcast by the VECU. The APP sensor circuits are monitored to identify the following:

Accelerator Pedal Position (APP) Sensor, Rationality Monitors

The vehicle electronic control unit (VECU) simultaneously reads the APP sensor and the idle validation (IV) switch values and performing a plausibility to verify sensor performance.

Aftertreatment Control Module (ACM), Rationality Monitors

If electrical power to the ACM is lost or very low the ACM will stop functioning. Aftertreatment diesel exhaust fluid (DEF) dosing will stop. The engine control module (ECM) will log a

Aftertreatment Control Module (ACM) 5 Volt Supply 1, Circuit Monitors

The ACM 5 volt supply "1" circuit is monitored to identify the following:

Circuit low

Aftertreatment Control Module (ACM) 5 Volt Supply 2, Circuit Monitors

The ACM 5 volt supply"2" circuit is monitored to identify the following:

Circuit low

Aftertreatment Control Module (ACM) Actuator Supply Voltage 1, Circuit Monitors

The ACM actuator supply voltage "1" circuit is monitored to identify the following:

- Circuit open
- Circuit low

Aftertreatment Control Module (ACM) Actuator Supply Voltage 2, Circuit Monitors

The ACM actuator supply voltage "2" circuit is monitored to identify the following:

- ٠ Circuit open
- Circuit low

Aftertreatment Diesel Exhaust Fluid (DEF) Dosing Valve, Circuit Monitors

The aftertreatment DEF dosing valve circuits are monitored to identify the following:

Circuit open

Aftertreatment Diesel Exhaust Fluid (DEF) Dosing Valve, Rationality Monitors

The aftertreatment DEF pump control value is monitored when the aftertreatment DEF dosing valve duty cycle has been above a predetermined threshold, for a short duration. If the

DEF line.

Aftertreatment Diesel Exhaust Fluid (DEF) Pressure Sensor, Circuit Monitors

The aftertreatment DEF pressure sensor circuits are monitored to identify the following:

Circuit open/circuit high

- Circuit open
- Circuit low
- Circuit high

diagnostic trouble code (DTC) indicating SAE J1939 data link (sub data link CAN2) communications from the ACM is missing.

Circuit high

When either fault is detected the supply is disabled.

Circuit high

When circuit high or circuit low faults are detected the supply is disabled.

Circuit high

When circuit high or circuit low faults are detected the supply is disabled.

Circuit high

When circuit high or circuit low faults are detected the supply is disabled.

- Circuit low
- Circuit high

control value is too low a diagnostic trouble code (DTC) is set. This indicates a clogged dosing valve or blocked aftertreatment

- Out of range low
- Out of range high
- Circuit low

Aftertreatment Diesel Exhaust Fluid (DEF) Pressure Sensor, Rationality Monitors

During pressure build up (aftertreatment DEF pump runs with maximum speed with no dosing) if selective catalytic reduction (SCR) system pressure stays low for a preset duration, a diagnostic trouble code (DTC) is set. Pressure is

Aftertreatment Diesel Exhaust Fluid (DEF) Pump, Circuit Monitors

The aftertreatment DEF pump circuits are monitored to identify the following:

Circuit open

Aftertreatment Diesel Exhaust Fluid (DEF) Pump, Rationality Monitors

The aftertreatment DEF pump gets a signal for the required pump speed from the aftertreatment control module (ACM). The pump has internal diagnosis which evaluates the pump speed quality. If the pump speed deviates from commanded speed for some time a diagnostic trouble code (DTC) is set.

Aftertreatment Diesel Exhaust Fluid (DEF) Return Value, Circuit Monitors

The aftertreatment DEF return valve circuits are monitored to identify the following:

Circuit open

Aftertreatment Diesel Exhaust Fluid (DEF) Return Valve, Rationality Monitors

During reverse DEF flow conditions on a pressurized selective catalytic reduction (SCR) system, pressure drop is evaluated. If DEF pressure drop is too low, the aftertreatment DEF return

Aftertreatment Diesel Exhaust Fluid (DEF) Tank Heater Valve, Circuit Monitors

The aftertreatment DEF tank heater valve circuits are monitored to identify the following:

Circuit open

Aftertreatment Diesel Exhaust Fluid (DEF) Tank Heater Valve, Rationality Monitors

Aftertreatment DEF tank heater valve diagnostics evaluates if tank heater is taking place, when demanded. A comparison of an initial aftertreatment DEF tank temperature without heating and then a tank temperature with aftertreatment DEF

Aftertreatment Diesel Exhaust Fluid (DEF) Tank Temperature Sensor, Circuit Monitors

The aftertreatment DEF tank temperature sensor circuits are monitored to identify the following:

Circuit open/circuit high

Aftertreatment Diesel Exhaust Fluid (DEF) Tank Temperature Sensor, Rationality Monitors

Aftertreatement DEF tank temperature is checked for high frequency oscillations with high amplitude that is so large that is physically impossible for a temperature to achieve. A fault is set when this behavior is observed. Aftertreatement DEF tank temperature diagnostics is also evaluating if the

aftertreatement DEF temperature is too high and will activate reverse flow (to protect aftertreatment selective catalytic reduction (SCR) system components) and a timer is started. If the temperature stays high for a short duration, a fault is set.

Aftertreatment Diesel Particulate Filter (DPF), Differential Pressure Sensor, Circuit Monitoring

The aftertreatment DPF differential pressure sensor circuits are monitored to identify the following:

- stuck) and a diagnostic trouble code (DTC) is set.
- Circuit low
- Circuit high

Out of range low

Circuit low

valve is considered to have a mechanical fault (blocked or

the sensor shows high values when the model is high gives a

sensor stuck check. The second step can also find (large)

Aftertreatement Diesel Particulate Filter (DPF) Differential Pressure Sensor, Rationality Monitors

The evaluation of the pressure-drop sensor is carried out as follows. When the pressure model indicates a low pressure the sensor should also show a low pressure otherwise there is a (large) positive offset fault. Combining this with a check that

Aftertreatment Fuel Pressure Sensor, Circuit Monitors

The aftertreatment fuel pressure sensor circuits are monitored to identify the following:

- Circuit open
- Out of range low

Aftertreatment Fuel Shutoff Valve, Circuit Monitors

The aftertreatment fuel shutoff valve circuits are monitored to identify the following:

• Circuit open

Aftertreatment Hydrocarbon Doser, Circuit Monitors

The aftertreatment hydrocarbon doser circuits are monitored to identify the following:

• Circuit open

Aftertreatment Nitrogen Oxides (NOx) Sensors, Circuit Monitors

The NOx sensors circuits are monitored to identify the following:

• open circuit

Aftertreatment Nitrogen Oxides (NOx) Sensors, Rationality Monitors

There are two different monitors which diagnose aftertreatment NOx sensor rationality. One compares the aftertreatment intake NOx sensor value to a calculated engine NOx output value. This is only perform within a given set of predetermined conditions. If the NOx sensor value is not deemed within range, a faulty is set.

Ambient Air Temperature (AAT) Sensor, Circuit Monitors

The AAT sensor circuits are monitored by the instrument cluster module to identify the following:

• Current below normal or open

Ambient Air Temperature (AAT) Sensor, Rationality Monitors

Plausibility of the sensor value is determined by comparing the AAT with the intake air temperature (IAT).

Barometric Pressure (Baro) Sensor Circuit Monitoring

The BARO sensor circuits are monitored to identify the following:

Circuit low

Barometric Pressure (BARO) Sensor Rationality Monitors

The BARO sensor, intake manifold pressure (IMP) sensor, and crankcase pressure (CCP) sensor should show the same pressure when engine speed (RPM) and torque is low. The diagnosis calculates the difference between:

- Circuit low
- Circuit high
- high voltage
- circuit low or high

The other compares theaftertreatment intake NOx sensor value to the aftertreatment outlet NOx sensor value to determine rationality. This is only perform within a given set of predetermined conditions. If either of the aftertreatment NOx sensor values are deemed not plausible, a diagnostic faulty code (DTC) is set.

Current above normal or grounded

None of the AAT sensor circuits are monitored by the ECM or the VECU.

Camshaft Position (CMP) Sensor, Circuit Monitors

- The CMP sensor circuits are monitored to identify the following:
- Circuit open

Camshaft Position (CMP) Sensor, Rationality Monitors

The CMP sensor is monitored by comparing it's output signal to the output signal of the crankshaft position (CMP) sensor. This comparison is used to identify abnormal CKP and CMP

Crankcase Pressure (CCP) Sensor, Circuit Monitors

The CCP circuits are monitored to identify the following:

- Circuit open
- Out of range low

Crankcase Pressure (CCP) Sensor, Rationality Monitors

The BARO sensor, intake manifold pressure (IMP) sensor, and crankcase pressure (CCP) sensor should show the same pressure when engine speed (RPM) and torque is low. The diagnosis calculates the difference between:

Crankshaft Position (CKP) Sensor, Circuit Monitors

The CKP sensor circuits are monitored to identify the following:

Circuit open

Crankshaft Position (CKP) Sensor, Rationality Monitors

The CKP sensor is monitored by comparing it's output signal to the output signal of the camshaft position (CMP) sensor. This comparison is used to identify abnormal CKP and CMP

Engine Control Module (ECM) 5 Volt Supply A, Circuit Monitors

The ECM 5 volt supply "A" circuit is monitored to identify the following:

Circuit low

Engine Control Module (ECM) 5 Volt Supply B, Circuit Monitors

The ECM 5 volt supply "B" circuit is monitored to identify the following:

Engine Coolant Temperature (ECT) Sensor, Circuit Monitors

Out of range low

Engine Coolant Temperature (ECT) Sensor, Rationality Monitors

The ECT sensor is monitored for rationality at key **ON** by comparing the ECT with engine oil temperature (EOT) and engine turbocharger compressor outlet temperature. For

Engine Exhaust Gas Recirculation (EGR), Differential Pressure Sensor, Circuit Monitoring

The engine EGR differential pressure sensor circuits are monitored to identify the following:

- Circuit low

The ECT sensor circuits are monitored to identify the following:

- Circuit open

sensor frequency as well as camshaft to crankshaft phasing (calculated top dead center (TDC). Abnormal sensor frequency and shaft phasing angle will set faults.

- Circuit high

When either fault is detected the supply is disabled.

Engine Exhaust Gas Recirculation (EGR), Differential Pressure Sensor, Rationality Monitors

Engine EGR differential pressure is estimated based on engine speed (RPM) or torque and corrected for variable geometry turbocharger (VGT) position, EGR valve position, intake manifold pressure (IMP) and barometric pressure (BARO). This estimated engine EGR differential pressure is compared with actual measured pressure. This comparison is used to

identify if the engine EGR differential pressure sensor is faulty. During certain conditions the engine EGR differential pressure should be zero. The engine EGR differential pressure sensor is also monitored during these conditions to verify that the engine EGR is closing as necessary as well as to verify proper engine EGR differential pressure sensor operation.

Engine Exhaust Gas Recirculation (EGR) Temperature Sensor, Circuit Monitors

The engine EGR temperature sensor circuits are monitored to identify the following:

- Circuit open
- Out of range low

Engine Exhaust Gas Recirculation (EGR) Temperature Sensor, Rationality Monitors

For information about the engine EGR temperature sensor rationality refer to "Intake Air Temperature (IAT) Sensor, Rationality Monitors", page 20.

Engine Exhaust Gas Temperature (EGT) Sensors, Circuit Monitors

The exhaust system is equipped with the following three engine EGT sensors:

- 1 Engine EGT sensor
- 2 Aftertreatment diesel particulate filter (DPF) intake temperature sensor
- 3 Aftertreatment DPF outlet temperature sensor
- Circuit low Circuit high

Out of range low

Out of range high

following: • Circuit open

Engine Exhaust Gas Temperature (EGT) Sensors, Rationality Monitors

There are two independent tests that can evaluate temperature sensor plausibility in the exhaust system. One is performed while stationary and the other is performed at cold start. Each sensors output value is used to compare against the other

sensor values. This in turn is used to determine the plausibility of the sensors. If the temperatures received by any of the sensors is deemed to be out of range, a plausibility fault is set.

The engine EGT sensor circuits are monitored to identify the

Engine Turbocharger Compressor Bypass Valve Solenoid, Circuit Monitors

The engine turbocharger compressor bypass valve solenoid circuits are monitored to identify the following:

Circuit open

Engine Turbocharger Compressor Bypass Valve Solenoid, Rationality Monitors

The engine turbocharger compressor bypass valve solenoid fault detection is performed during the phase where the valve is opened, the intake manifold pressure (IMP) is monitored and compared to the maximum allowed.

Engine Turbocharger Compressor Outlet Temperature Sensor, Circuit Monitors

The engine turbocharger compressor outlet temperature sensor circuits are monitored to identify the following:

Circuit open

18

٠ Out of range low

Engine Turbocharger Compressor Outlet Temperature Sensor, Rationality Monitors

The engine turbocharger compressor outlet temperature sensor, is monitored for rationality by comparing the sensor output value against an estimated temperature based on ambient air temperature (AAT), intake manifold pressure (IMP), barometric pressure (BARO) and a calculated efficiency of the turbocharger.

 Circuit low Circuit high

Engine Turbocharger Speed Sensor, Circuit Monitors

The engine turbocharger speed sensor circuits are monitored to identify the following:

- Circuit open
- Out of range low

Engine Turbocharger Speed Sensor, Rationality Monitors

An engine turbocharger speed sensor test is run within a set of conditions to evaluate the speed sensor output value. The engine turbocharger speed sensor value is compared to

Engine Variable Geometry Turbocharger (VGT) Actuator Position, Circuit Monitors

The engine VGT actuator position position actuator circuits are monitored to identify the following:

Circuit open

Engine Variable Geometry Turbocharger (VGT) Actuator Position, Rationality Monitors

The engine VGT has a smart actuator position that is checked within Smart Remote Actuator (SRA) unit. Engine VGT

Exhaust Gas Recirculation (EGR) Valve Actuator, Circuit Monitors

The EGR valve actuator circuits are monitored to identify the following:

Circuit open

Exhaust Gas Recirculation (EGR) Valve Actuator, Rationality Monitors

When EGR valve is commanded to be closed, the EGR differential pressure sensor is monitored and expects no pressure difference between upstream and downstream of EGR venture. A fault occurs when differential pressure greater than a fault limit due to a stuck-open EGR valve or a leaking

Fan, Circuit Monitors

The fan circuits are monitored to identify the following:

- Circuit open
- Circuit low
- Circuit high

Electrical power is supplied to the fan drive from the chassis. Circuit monitoring is performed on the low side drive. The fan circuitry is such, that when the low side drive is opened the fan will be on. Closing the path to ground causes the fan to turn off. Since the low side is monitored the checks are only performed under certain conditions:

Open circuit monitoring is only performed when the fan is ON (open circuit low). The open circuit fault detects when power is not supplied to the high side of the fan drive

Fan, Rationality Monitors

Fan speed is calculated from the commanded percent engagement, the engine speed and the fan drive ratio. If a fan speed sensor is present the sensor speed signal is sent.

EGR valve is detected for a period of time. A stuck-closed EGR valve can be detected if the difference from the actual burned fraction to the demanded burned fraction is lower than a fault limit for a period of time. There is no EGR Valve position feedback.

- Circuit low monitoring is only performed when the fan is ON (open circuit low). The circuit low fault detects when the low side control line is shorted to ground
- Circuit high monitoring is only performed when the fan is OFF (closed circuit low). The circuit high fault detects an over-current condition on the low side control line. If this over-current condition is detected the drive is disabled (fan ON) until the key is cycled

Some fans also have a fan speed sensor. If the fan is equipped with a speed sensor circuit high is also supported. This diagnostic is used for any electrical cause of a missing signal. If the fan does not support a speed sensor this circuit monitor is not supported.

a calculated speed value that is based on intake manifold pressure (IMP). If the sensor output value is deemed out of range a fault is set.

- Circuit low
- Circuit high
- position is then communicated to engine control module (ECM) via the SAE J1939 (CAN) data link.
- Circuit low
- Circuit high

- Out of range high
- Circuit low
- Circuit high

Injector, Circuit Monitors

The injector circuits are monitored to identify the following:

• Circuit open

Intake Air Temperature (IAT) Sensor, Circuit Monitors

The IAT sensor circuits are monitored to identify the following:

- Circuit open
- Out of range low

Intake Air Temperature (IAT) Sensor, Rationality Monitors

The IAT sensor is used to calculate engine charge air cooler (CAC) ambient air temperature (AAT). The CAC AAT can be calculated in the two following ways,

• Using engine exhaust exhaust gas recirculation (EGR) temperature and IAT with their corresponding mass flow rates.

Intake Manifold Pressure (IMP) Sensor Circuit Monitoring

The IMP sensor circuits are monitored to identify the following:

- Circuit open
- Out of range low

Intake Manifold Pressure (IMP) Sensor Rationality Monitors

The IMP sensor, BARO sensor, and crankcase pressure (CCP) sensor should show the same pressure when engine speed and torque is low. The diagnosis calculates the difference between:

Injector, Rationality Monitors

For injector rationality monitor information refer to "Fuel System", page 9.

Parking Brake Switch, Circuit Monitors

The vehicle electronic control unit (VECU) does not support comprehensive circuit monitoring on parking brake switch.

Parking Brake Switch, Rationality Monitors

The vehicle electronic control unit (VECU) does not support rationality monitors on the parking brake switch.

Power Take-off (PTO) Enable Switch, Circuit Monitors

The vehicle electronic control unit (VECU) does not support comprehensive circuit monitoring for the PTO enable switch input. However, based on the type of failure modes to the circuit the PTO operation will be or become non-functional. The failure mode behaviors are defined as:

 Short to Ground – A short circuit to ground will result in a non-functional PTO operation.

Power Take-off (PTO) Enable Switch, Rationality Monitors

The vehicle electronic control unit (VECU) does not support rationality monitors on the PTO enable switch.

- Circuit low
- Circuit high
- Circuit low
- Circuit high
- Using AAT, engine turbocharger compressor outlet temperature and the mass air flow (MAF) rate.

If there is a mismatch in these two estimated temperatures it is concluded that the most probably cause is on of the temperature sensors. The system then rationalizes which sensor is faulty.

- Out of range high
- Circuit low
- Circuit high
- BARO and IMP
- BARO and CCP
- IMP and CCP

These comparisons are used to identify defects.

- Short to Battery A short circuit to battery voltage will not have an immediate affect to the PTO operation, but will result in a non-functional PTO operation after exiting the PTO function or during the next VECU power down/up sequence (I.e. Cycling of the ignition key switch).
- **Open Circuit –** An open will result in a non-functional PTO operation.

SAE J1939 (CAN1) Data Link, Circuit Monitors

Error detection of the SAE J1939 (CAN1) data link is performed by multiple electronic control units (ECUs). An ECU detecting an error condition signals this by transmitting an error flag. There are 5 types of error detections:

• Bit error

SAE J1939 (CAN1) Data Link, Rationality Monitors

Rationality monitors do not exist for the SAE J1939 (CAN1) data link.

SAE J1939 (CAN2) Data Link, Overview

The SAE J1939 (CAN2) data link is a sub-data link that communicates information directly to the engine control module (ECM). There's no direct communication to other electronic control units (ECUs) residing on the on the SAE J1939 (CAN1) data link. Information that is sent across the CAN2 data link

SAE J1939 (CAN2) Data Link, Circuit Monitors

Error detection of the SAE J1939 (CAN2) data link is performed by multiple electronic control units (ECUs). An ECU detecting an error condition signals this by transmitting an error flag. There are 5 types of error detections:

• Bit error

SAE J1939 (CAN2) Data Link, Rationality Monitors

Rationality monitors do not exist for the SAE J1939 (CAN2) data link.

Time/Date, Circuit Monitoring

The instrument cluster does not support comprehensive circuit monitoring for the Time/Date.

Time/Date, Rationality Monitoring

The engine control module (ECM) does support rational monitoring by comparing time and date from instrument

Vehicle Speed Sensor (VSS), Circuit Monitors

The comprehensive circuit monitors are supported by the vehicle electronic control unit (VECU) and are determined by the vehicle road speed source. When a dedicated speed sensor is used, electrical error detection is supported. When

Vehicle Speed Sensor (VSS), Rationality Monitors

Error detection is performed by comparing another source of vehicle speed information to the calculated vehicle road speed. At zero vehicle road speed an error is generated when the comparison vehicle speed source (ABS/EBS) is higher than a specified limit. When the vehicle road speed is greater than zero the difference between the calculated vehicle road speed and the comparison vehicle speed source (ABS/EBS) is not allowed to be greater than a specified value or a fault is registered.

- Stuff error
- Cyclic Redundancy Code (CRC) error
- Form error
- Acknowledgement error

can be shared on the CAN1 data link via the ECM. Diagnostic trouble codes (DTCs) are set when an ECU is found to not be communicating or recognized on the data link (off bus mode) or when there is an abnormal rate of occurrence of errors on the data link.

- Stuff error
- Cyclic Redundancy Code (CRC) error
- Form error
- Acknowledgement error

cluster. Soak time is based on engine cooling down using temperatures before and after soak.

the transmission output shaft speed (OSS) sensor is used via the SAE J1939 data link, the diagnostics are based on a communication timeout and receiving "error indicator" flagged from the transmitting electronic control unit (ECU).

Troubleshooting

Engine Control Module (ECM) Diagnostic Trouble Codes (DTCs)

The manufacturer scan tool is the preferred tool for performing diagnostic work. Contact your local dealer for more information or visit "www.premiumtechtool.com".

Note: The use of a scan tool is necessary to perform diagnostic work as well as clearing of any diagnostic trouble codes (DTCs). DTC(s) can no longer be cleared using the vehicles instrument cluster digital display and stalk switch control.

SAE J1939 Data Link Communication

The electronic control units (ECUs) that communicate on the SAE J1939 data link, communicate according to the SAE J1587 standard. The diagnostic trouble codes (DTCs) set by the ECUs contain information that is described by the following abbreviations.

SA	Source Address: Identification of a control module.
SPN	Suspect Parameter Number: Identification of a parameter (value).
FMI	Failure Mode Identifier:

Identification of fault types.

ECM SPN 84, Wheel-Based Vehicle Speed – MID 128 PID 84

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 Missing signal from VECU 	• Engine derate	 SAE J1587 data link vehicle speed message does not exist, (VECU error) VECU
FMI 10	 Abnormal rate of change 	 Vehicle speed deemed inaccurate by VECU 	 MIL illuminated (13L engine only) 	Vehicle speed sensor (VSS)VECU
FMI 13	Out of calibration	 No vehicle speed available to VECU 	 MIL illuminated (13L engine only) 	Vehicle speed sensor (VSS)VECU
FMI 19	 Received network data in error 	 Vehicle speed deemed inaccurate by VECU 	 MIL illuminated (13L engine only) 	Vehicle speed sensor (VSS)VECU

ECM SPN 91, Accelerator Pedal Position 1 – MID 128 PID 91

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 Missing signal from VECU 	• N/A	 SAE J1587 data link pedal information not available
FMI 13	• Out of calibration	 Pedal not connected to VECU 	 MIL illuminated (13L engine only) 	 Accelerator pedal sensor fault
FMI 10	 Abnormal rate of change 	 Pedal position deemed inaccurate by VECU 	 MIL illuminated (13L engine only) 	 Accelerator pedal sensor fault
FMI 19	 Received network data in error 	 Pedal position deemed inaccurate by VECU 	 MIL illuminated (13L engine only) 	 Accelerator pedal sensor fault

ECM SPN 94, Engine Fuel Delivery Pressure – MID 128 PID 94

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Low fuel pressure sensor signal line voltage 	• N/A	 Damaged contacts in harness Faulty fuel pressure sensor Open circuit.
FMI 5	 Current below normal or open circuit 	 Low fuel pressure sensor signal line voltage 	• N/A	Damaged contacts in harnessFaulty fuel pressure sensor

FMI 7	 Mechanical system not responding properly 	 Drop in fuel pressure 	• Engine derate	 Clogged fuel filter Faulty fuel pressure sensor Leaking fuel line or fitting Poor fuel pump response
FMI 13	• Out of Calibration	 Sensor indicates a invalid value 	• N/A	 Wiring harness Faulty fuel pressure sensor Clogged fuel filter
FMI 15	 Data valid but above normal operating range - Least severe level 	 Sensor indicates a invalid value 	• N/A	Wiring harnessFaulty fuel pressure sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor indicates a invalid value 	• N/A	Wiring harnessFaulty fuel pressure sensorClogged fuel filter
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Drop in fuel pressure 	• Engine derate	 Clogged fuel filter Faulty fuel pressure sensor Leaking fuel line or fitting Poor fuel pump response

ECM SPN 97, Water in Fuel Indicator - MID 128 PID 97

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	• Water in fuel is indicated	Uneven runningEngine stalling	• Water in fuel
FMI 3	 Voltage above normal, or shorted to high source 	• N/A	 Undetected water in fuel supply Uneven running Engine stalling 	Open circuit
FMI 4	 Voltage below normal, or shorted to low source 	• N/A	 Undetected water in fuel supply Uneven running 	 Short to ground Open circuit Faulty sensor

ECM SPN 98, Engine Oil Level – MID 128 PID 98

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but above normal operational range 	 Critically below range 	 Red engine shutdown or yellow electronic malfunction lamps illuminated dependent of severity 	 Low oil level leakage Critically low oil level
FMI 4	 Voltage below normal, or shorted to low source 	 Short Circuit - Positive side 	 Oil level can not be measured 	Engine Oil Level (EOL) sensor failureFaulty harness
FMI 5	 Current below normal or open circuit 	 Short Circuit +, Positive side Open Circuit +, Positive side Open Circuit- Negative side 	 Oil level can not be measured 	 Engine Oil Level (EOL) sensor failure Faulty harness
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Moderately below range Critically below range 	 Red engine shutdown or Yellow electronic malfunction lamps illuminated dependent of severity 	 Low oil level leakage Moderately low oil level

ECM SPN 100, Engine Oil Pressure – MID 128 PID 100

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range 	 Critically below range 	 Engine derate Low pressure Red engine shutdown lamp illuminated 	Oil leakageBroken oil pumpClogged oil system
FMI 3	 Voltage below normal or shorted low 	 Short Circuit +, Measuring line Open Circuit, Ground line 	 Oil pressure shows 0 in the cluster, engine is running Yellow electronic malfunction lamp illuminated 	 Engine Oil Pressure (EOP) sensor failure Faulty harness

FMI 5	 Current below normal or open circuit 	 Open Circuit +, 5V Supply line Short Circuit -, Measuring line Open Circuit, Measuring line 	 Oil pressure shows 0 in the cluster, engine is running Yellow electronic malfunction lamps illuminated 	 Engine Oil Pressure (EOP) sensor failure Faulty harness
FMI 13	• Out of Calibration	 Sensor indicates a invalid value 	 Oil pressure shows 0 in the cluster, engine is running 	 Engine Oil Pressure (EOP) sensor failure Faulty harness
FMI 15	 Data valid but above normal operating range - Least severe level 	 Sensor indicates a invalid value 	 Oil pressure shows 0 in the cluster, engine is running 	 Engine Oil Pressure (EOP) sensor failure Faulty harness
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor indicates a invalid value 	 Oil pressure shows 0 in the cluster, engine is running 	 Engine Oil Pressure (EOP) sensor failure Faulty harness

ECM SPN 102, Engine Intake Manifold 1 Pressure – MID 128 PID 102

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Intake Manifold Pressure Sensor output is too high or too low 	 Engine derate MIL lamp illuminated 	 Faulty harness Intake Manifold Pressure sensor
FMI 3	 Voltage above normal, or shorted to high source 	 A short to battery in the metering circuit An open in the ground circuit of the Intake Manifold Pressure Sensor 	 Engine derate MIL lamp illuminated 	 Faulty harness Harness connectors Intake Manifold Pressure sensor
FMI 5	 Current below normal or open circuit 	 A short to ground in the harness An open in the 5 volt supply circuit An open in the metering circuit 	 Engine derate MIL lamp illuminated 	 Faulty harness Harness connectors Intake Manifold Pressure sensor
FMI 12	 Bad intelligent device or component 	 Intake Manifold Pressure sensor output is too high Sensor indicates a invalid value 	 Engine derate MIL lamp illuminated 	 Faulty harness Intake Manifold Pressure sensor

FMI 13	• Out of Calibration	 Sensor indicates a invalid value 	 Engine derate MIL lamp illuminated 	Faulty harnessHarness connectorsIntake Manifold Pressure sensor
FMI 14	 Special instructions 	 Intake Manifold Pressure sensor output is too low Sensor indicates a invalid value 	 Engine derate MIL lamp illuminated 	 Faulty harness Intake Manifold Pressure sensor Inlet air leakage
FMI 15	 Data valid but above normal operating range - Least severe level 	 Intake Manifold Pressure sensor output is too high 	 Engine derate MIL lamp illuminated 	Faulty harnessHarness connectorsIntake Manifold Pressure sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor indicates a invalid value 	 Engine derate MIL lamp illuminated 	Faulty harnessHarness connectorsIntake Manifold Pressure sensor

ECM SPN 103, Engine Turbocharger 1 Speed – MID 128 PID 103

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range 	 Turbocharger speed is at least 25% greater than the target wheel speed for the measured boost 	Engine derateMIL illuminated	 Miss detection Faulty harness Faulty harness connector Turbocharger Speed Sensor
FMI 1	 Data valid but below normal operational range - Most severe level 	 Turbocharger speed is at least 25% less than the target wheel speed for the measured boost 	 Engine derate MIL illuminated 	 Miss detection Faulty harness Faulty harness connector Turbocharger Speed Sensor
FMI 9	 Abnormal update rate 	 A fault is logged if the Turbocharger Speed Sensor signal is lost 	 Engine derate MIL illuminated 	Faulty harnessFaulty harness connectorTurbocharger Speed Sensor
FMI 15	 Data valid but above normal operating range - Least severe level 	 Turbocharger speed is at least 25% greater than the target wheel speed for the measured boost 	Engine derateMIL illuminated	 Miss detection Faulty harness Faulty harness connector Turbocharger Speed Sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Turbocharger speed is at least 25% less than the target wheel speed for the measured boost 	Engine derateMIL illuminated	 Miss detection Faulty harness Faulty harness connector Turbocharger Speed Sensor

ECM SPN 105, Engine Intake Manifold 1 Temperature – MID 128 PID 105

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Sensor indicates a invalid value 	 Engine derate 	Poor coolingExtreme running conditions
FMI 2	 Data erratic, intermittent or incorrect 	 The Intake Manifold Temperature sensor output is too high or too low 	 Engine derate MIL illuminated 	 Poor cooling Extreme running conditions Engine Intake Manifold sensor Faulty harness Faulty harness connector Ambient Air Temperature sensor
FMI 4	 Voltage below normal, or shorted to low source 	• N/A	 Difficult to start in cold climates Minor cold engine smoke Engine derate MIL illuminated 	 Engine Intake Manifold sensor Faulty harness Faulty harness connector
FMI 5	 Current below normal or open circuitt 	 Possible short to sensor 	 Difficult to start in cold climates Engine derate MIL illuminated 	 Engine Intake Manifold sensor Faulty harness Faulty harness connector
FMI 13	 Out of Calibration 	 The sensor output is showing a constant value 	 Engine derate Minor cold engine smoke MIL illuminated 	 Engine Intake Manifold sensor Faulty harness Faulty harness connector
FMI 17	 Data valid but below normal operating range - Least severe level 	 The sensor output is showing a constant value 	 Engine derate Minor cold engine smoke MIL illuminated 	 Engine Intake Manifold sensor Faulty harness Faulty harness connector

ECM SPN 108, Barometric Pressure – MID 128 PID 108

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Barometric Pressure sensor output is too high or too low 	Minor engine derateMIL illuminated	Faulty SensorFaulty Engine Control Module

FMI 3	 Voltage above normal, or shorted to high source 	• Short to battery on the metering side	MIL illuminated	 Internal fault in the Engine Control Module Faulty Sensor
FMI 4	 Voltage below normal, or shorted to low source 	• A short to ground on the metering side	MIL illuminated	 Internal fault in the Engine Control Module Faulty Sensor

ECM SPN 110, Engine Coolant Temperature – MID 128 PID 110

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Coolant temperature indicates critical limit 	 Engine derate Red engine shutdown lamp illuminated 	 Extreme driving condition Faulty coolant thermostat Malfunctioning fan Blocked radiator
FMI 2	 Data erratic, intermittent or incorrect 	• Engine Coolant Temperature sensor output is too high or too low	 May affect driveability in extreme cases MIL illuminated 	Faulty SensorFaulty harnessFaulty coolant thermostat
FMI 4	 Voltage below normal or shorted low 	 Engine Coolant Temperature sensor voltage too low 	 Difficult to start in cold climates Idle run regulation is deteriorated MIL illuminated 	Faulty SensorFaulty harness
FMI 5	 Current below normal or open circuit 	• N/A	 Difficult to start in cold climates Idle run regulation is deteriorated MIL illuminated 	Faulty SensorFaulty harness
FMI 10	 Abnormal rate of change 	 Engine Coolant Temperature sensor output is showing a constant value 	 May affect vehicle driveability MIL illuminated 	Faulty SensorFaulty harness
FMI 13	• Out of Calibration	 Sensor out of range Sensor indicates a invalid value 	 MIL illuminated 	 Faulty Sensor

FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Coolant temperature indicates moderate upper limit 	 Engine derate Yellow electronic malfunction lamp illuminated 	 Extreme driving condition Faulty coolant thermostat Malfunctioning fan Blocked radiator
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor out of range Sensor indicates a invalid value 	 MIL illuminated 	Faulty Sensor

ECM SPN 111, Engine Coolant Level – MID 128 PID 111

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range - Most severe level 	 Critically below range Coolant level can not be detected 	 Engine derate Red engine shutdown lamp illuminated Coolant level can not be detected 	Coolant level below rangeFaulty harness
FMI 3	 Voltage above normal, or shorted to high source 	 Short Circuit +, measuring line Coolant level can not be detected 	 Coolant level can not be detected Yellow electronic malfunction lamp illuminated 	 Faulty harness Faulty harness connector Faulty level sensor
FMI 4	 Voltage below normal, or shorted to low source 	 Short Circuit -, measuring line Coolant level can not be detected 	 Coolant level can not be detected Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty level sensor
FMI 5	 Current below normal or open circuit 	 Open Circuit Coolant level can not be detected 	 Coolant level can not be detected Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty level sensor
FMI 14	 Special instructions 	 Sensor out of range Sensor indicates a invalid value 	 Coolant level can not be detected Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty level sensor
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Sensor out of range Sensor indicates a invalid value 	 Coolant level can not be detected Yellow electronic malfunction lamp illuminated 	 Faulty harness Faulty harness connector Faulty level sensor

ECM SPN 153, Engine High Resolution Crankcase Pressure – MID 128 PID 153/PSID 23

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Out of range, max voltage, illegal Critically Above Range 	 Red engine shutdown lamp illuminated Forced idle Engine shut down 	 Piston ring blow-by
FMI 2	 Data erratic, intermittent or incorrect 	 Crankcase pressure indication to high or to low a value 	 MIL illuminated 	 Faulty Crank Case Pressure senor Faulty harness
FMI 3	 Voltage above normal or shorted to high source 	 Short Circuit +, Measuring line Open Circuit, Ground line 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Faulty Crank Case Pressure senor Faulty harness
FMI 5	 Current below normal or open circuit 	 Open Circuit +, 5V Supply Line Short Circuit -, measuring line Open Circuit, measuring line 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Faulty Crank Case Pressure senor Faulty harness
FMI 7	 Mechanical system not responding or out of adjustment 	 Leakage detected in the crankcase ventilation system 	• MIL illuminated	 Faulty separator, hoses or pipes
FMI 13	Out of Calibration	 Sensor out of range Sensor indicates a invalid value 	 MIL illuminated 	 Faulty Sensor
FMI 15	 Data valid but above normal operating range - Least severe level 	 Sensor out of range Sensor indicates a invalid value 	 MIL illuminated 	 Faulty Sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor out of range Sensor indicates a invalid value 	• MIL illuminated	 Faulty Sensor

ECM SPN 158, Keyswitch Battery Potential – MID 128 PID 158/PSID 124

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range 	 Engine Control Module battery voltage too high 	• N/A	Charging system faultExternal chargerEngine control module (ECM)

FMI 1	 Data valid but below normal operational range 	 Engine Control Module battery voltage too low 	 Starter will not crank 	Charging system faultBatteryGround connection
FMI 3	 Voltage above normal, or shorted to high source 	 Engine Control Module battery voltage too high 	• N/A	Charging system faultExternal chargerEngine control module (ECM)
FMI 4	 Voltage below normal, or shorted to low source 	 Engine Control Module battery voltage too low 	 Starter will not crank 	Charging system faultBatteryGround connection
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Engine Control Module battery voltage too high 	• N/A	Charging system faultExternal chargerEngine control module (ECM)
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Engine Control Module battery voltage too low 	 Starter will not crank 	Charging system faultBatteryGround connection

ECM SPN 171, Ambient Air Temperature – MID 128 PID 171

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Key ON, Ambient Air Temperature message missing on SAE J1939 and SAE J1587 data links 	• N/A	Faulty instrument clusterFaulty harness
FMI 9	 Abnormal Update Rate 	 Key ON, Ambient Air Temperature message missing on SAE J1587 data link 	• N/A	Faulty instrument clusterFaulty harness
FMI 10	 Abnormal rate of change 	 Ambient Temperature sensor signal fault 	 MIL illuminated (13L engine only) 	 Faulty instrument cluster
FMI 12	 Bad intelligent device or component 	 Loss of SAE J1939 data link communication between Engine Control Module and Instrument Cluster Control Module 	 MIL illuminated (13L engine only) 	Faulty instrument clusterFaulty harness

FMI 13	• Out of calibration	 Ambient Temperature sensor signal fault 	 MIL illuminated (13L engine only) 	• Faulty instrument cluster/harness or cluster harness connectors
		 No ambient temperature calculated by Vehicle ECU 		
		 No valid ambient temperature received by Engine Control Module 		
FMI 14	Special instructions	 Ambient Temperature sensor signal fault 	• MIL illuminated	 Ambient Temperature sensor signal missing from Vehicle ECU
FMI 19	 Received network data in error 	 Ambient Temperature sensor signal fault 	 MIL illuminated (13L engine only) 	 Faulty instrument cluster

ECM SPN 173, Engine Exhaust Gas Temperature (EGT) – MID 128 PID 173

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Exhaust Gas Temperature is critically high 	 Engine derate Poor driveability Regeneration is not possible 	 Faulty harness Faulty harness connector Intake air leak
FMI 2	 Data erratic, intermittent or incorrect 	 Sensor is not rational 	 MIL illuminated Regeneration is not possible 	 Faulty harness Faulty harness connector Exhaust leak Intake air leak Sensor failure
FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground on the metering side of the circuit 	 MIL illuminated Regeneration is not possible 	 Sensor failure Faulty harness Faulty harness connector Aftertreatment control module (ACM)
FMI 5	• Current below normal or open circuit	 Short to battery on the metering side of the circuit Open in the metering side of the circuit Open in the ground side of the circuit 	• MIL illuminated	 Faulty harness Sensor failure Faulty harness connector
FMI 15	 Data valid but above normal operating range - Least severe level 	 Sensor out of range Sensor indicates a invalid value 	• MIL illuminated	Sensor failureFaulty harness
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Exhaust Gas Temperature is moderately too high 	Engine deratePoor driveability	 Faulty harness Faulty harness connector Intake air leak

ECM SPN 175, Engine Oil Temperature 1 – MID 128 PID 175

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Extreme driving conditions Engine oil temperature critically above range 	 Red engine shutdown lamp illuminated Engine derate 	 Extreme driving conditions Engine cooling fan Oil thermostat Coolant system Clogged oil cooler
FMI 2	 Data erratic, intermittent or incorrect 	 Engine oil temperature sensor indicating too high or too low a value (abnormal value) 	 MIL illuminated (13L engine only) In some cases may have an effect on driveability 	 Engine Oil Temperature (EOT) sensor failure Faulty harness
FMI 4	 Voltage below normal, or shorted to low source 	 Short circuit -, measuring line 	 MIL illuminated (13L engine only) Yellow electronic malfunction lamp illuminated 	 Engine Oil Temperature (EOT) sensor failure Faulty harness
FMI 5	 Current below normal or open circuit 	 Short circuit +, measuring line Open circuit 	 MIL illuminated (13L engine only) Yellow electronic malfunction lamp illuminated 	 Engine Oil Temperature (EOT) sensor failure Faulty harness
FMI 13	Out of Calibration	 Sensor out of range Sensor indicates a invalid value 	 MIL illuminated 	 Engine Oil Temperature (EOT) sensor failure
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Extreme driving conditions Engine oil temperature is moderately too high 	 Yellow electronic malfunction lamp illuminated Engine derate 	 Extreme driving conditions Engine cooling fan Oil thermostat Coolant system Clogged oil cooler
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor out of range Sensor indicates a invalid value 	• MIL illuminated	 Engine Oil Temperature (EOT) sensor failure

ECM SPN 177, Transmission Oil Temperature – MID 128 PID 177

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Oil temperature critically above range 	 Red engine shutdown lamp illuminated 	Transmission oil coolerCoolant system
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Oil temperature is moderately too high 	 Yellow electronic malfunction lamp illuminated 	 Extreme driving conditions Engine cooling fan Oil thermostat Coolant system Clogged oil cooler

ECM SPN 188, Engine Speed At Idle, Point 1 (Engine Configurations) – MID 128 PID 188

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Engine idle speed above desired speed 	 MIL illuminated High engine oil consumption High fuel consumption 	 Engine oil entering cylinders Leaking or faulty fuel injector
FMI 1	 Data valid but below normal operational range - Most severe level 	 Engine idle speed below desired speed 	 MIL illuminated High fuel consumption 	 Low engine torque production Faulty fuel injector Low cylinder compression Engine friction is too high

ECM SPN 190, Engine Speed – MID 128 PID 190

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Engine is/was overspeeding 	 Red engine shutdown lamp illuminated 	 Engine oil entering cylinders Faulty crankcase oil filter Possible engine brake engaged causing engine overspeeding Possible transmission downshift causing engine overspeeding

ECM SPN 228, Speed Sensor Calibration – MID 128 PID 228

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 SAE J1587 data link calibration factor message does not exist. (VECU error). 	 Wrong trip data 	• Vehicle ECU
FMI 11	 Failure mode not identifiable 	 SAE J1587 data link calibration factor message does not exist. (VECU error). 	 Wrong trip data 	• Vehicle ECU

ECM SPN 237, Vehicle Identification Number – MID 128 PSID 161/162

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 No answer from VIN 	 Yellow electronic malfunction lamp illuminated Engine will not start 	 Data link error ECM Missing VIN in other ECM's (commonly VECU, LCM)
FMI 12	 Bad intelligent device or component 	 Bad answer from VIN 	 Yellow electronic malfunction lamp illuminated Engine will not start 	 ECM Mismatched VIN sent from other ECM's (commonly VECU, LCM)

ECM SPN 245, Total Vehicle Distance – MID 128 PID 245

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 SAE J1587 data link total vehicle distance message does not exist. (VECU error). 	• N/A	• Vehicle ECU

ECM SPN 251, Time – MID 128 PID 251

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Time data message missing on SAE J1587 and J1939 data links. (Cluster error). 	• N/A	Instrument Cluster
		 Time stamp from cluster isn't available. 		
FMI 9	 Abnormal update rate 	 Time data message didn't arrive when expected. (Cluster error). Time stamp from cluster isn't available. 	• N/A	• Instrument Cluster
FMI 10	 Abnormal rate of change 	 Soak time too long. Time data fault, data deemed inaccurate. 	 MIL illuminated (13L engine only) Engine makes warm start but cold start needed. 	• Instrument Cluster
FMI 12	 Bad intelligent device or component 	 Time and date data missing on J1939 data link. 	• MIL illuminated	 Instrument Cluster Faulty harness Faulty harness connector
FMI 13	• Out of calibration	• Time/date fault	 MIL illuminated (13L engine only) 	 Instrument Cluster Faulty harness Faulty harness connector
FMI 19	 Received network data in error 	 Soaktime too long. Time data fault, data deemed inaccurate. 	 MIL illuminated (13L engine only) 	Instrument Cluster

ECM SPN 252, Date - MID 128 PID 252

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 Time stamp from cluster isn't available. 	• N/A	 Instrument Cluster
		 Date data message missing on SAE J1587 data link. (Cluster error). 		

ECM SPN 411, Engine Exhaust Gas Recirculation Differential Pressure – MID 128 PID 411

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Exhaust Gas Recirculation (EGR) differential pressure sensor output reading too high. (abnormal value) 	 MIL illuminated Engine derate 	 Faulty harness Faulty harness connector Faulty sensor EGR leakage Clogged EGR cooler
FMI 1	 Data valid but below normal operational range - Most severe level 	 Exhaust Gas Recirculation (EGR) differential pressure sensor output reading too low. (abnormal value) 	 MIL illuminated 	 Faulty harness Faulty harness connector Faulty sensor Clogged venturi
FMI 2	 Data erratic, intermittent or incorrect 	 Only used to control EGR valve. 	• N/A	• N/A
FMI 3	 Voltage above normal or shorted to high source 	 Short to battery in metering line Open in the ground circuit 	 MIL illuminated Engine derate 	 Faulty EGR differential pressure sensor connector Faulty EGR differential pressure sensor harness Faulty EGR differential pressure sensor

FMI 5	 Current below normal or open circuit 	 Open in the 5 volt supply line Short to ground in metering line Open in the metering line 	 MIL illuminated Engine derate 	 Faulty EGR differential pressure sensor connector Faulty EGR differential pressure sensor harness Faulty EGR differential pressure sensor
FMI 7	 Mechanical system not responding or out of adjustment 	 EGR differential pressure sensor is read either to high or too low. (Abnormal value). 	 MIL illuminated Engine derate 	 Faulty EGR differential pressure sensor connector Faulty EGR differential pressure sensor harness Faulty EGR differential pressure sensor EGR valve EGR valve leak Clogged venturi

ECM SPN 412, Engine Exhaust Gas Recirculation Temperature – MID 128 PID 412

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Engine Exhaust Gas Recirculation Temperature is above range 	 Engine derate 	Extreme driving conditionsEGR cooler failure
FMI 2	 Data erratic, intermittent or incorrect 	 EGR temperate signal, believed to be not valid (plausibility fault) 	MIL illuminatedEngine derate	 Faulty sensor
FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground on the metering side of the EGR Sensor circuit 	 MIL illuminated Engine power will be derated according to the error torque map 	 Faulty EGR Temperature Sensor connector Faulty EGR Temperature Sensor harness Faulty EGR Temperature Sensor
FMI 5	 Current below normal or open circuit 	 Short to battery in the metering side of the EGR Sensor circuit Open in the metering side of the EGR Sensor circuit Open circuit in the ground line of the EGR Sensor circuit 	 MIL illuminated Engine derate 	 Faulty EGR Temperature Sensor connector Faulty EGR Temperature Sensor harness Faulty EGR Temperature Sensor

FMI 13	• Out of calibration	 Engine Exhaust Gas Recirculation Temperature sensor is out of range (low) Sensor indicates a invalid value 	• MIL illuminated	 Faulty EGR Temperature Sensor connector Faulty EGR Temperature Sensor harness Faulty EGR Temperature Sensor
FMI 13	• Out of calibration	 Engine Exhaust Gas Recirculation Temperature sensor is above range 	• Engine derate	Extreme driving conditionsEGR cooler failure
FMI 15	 Data valid but above normal operating range - Least severe level 	 Engine Exhaust Gas Recirculation Temperature sensor is out of range (high) Sensor indicates a invalid value 	• MIL illuminated	 Faulty EGR Temperature Sensor connector Faulty EGR Temperature Sensor harness Faulty EGR Temperature Sensor
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Engine Exhaust Gas Recirculation Temperature is above range 	 Engine derate 	Extreme driving conditionsEGR cooler failure
FMI 17	 Data valid but below normal operating range - Least severe level 	 Engine Exhaust Gas Recirculation Temperature is out of range (low) Sensor indicates a invalid value 	• MIL illuminated	 Faulty EGR Temperature Sensor connector Faulty EGR Temperature Sensor harness Faulty EGR Temperature Sensor

ECM SPN 558, Accelerator Pedal 1 Idle Validation Switch – MID 128 SID 230

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Idle Validation Switch (IVS) signal shorted to voltage 	 Yellow electronic malfunction lamp illuminated 	 Faulty harness or connector
FMI 5	 Current below normal or open circuit 	 Idle Validation Switch (IVS) signal shorted to ground or open 	Yellow electronic malfunction lamp illuminated	 Faulty harness or connector

ECM SPN 626, Intake Air Heater (IAH) Relay – MID 128 PID 45

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Short Circuit +, Measuring line 	 Preheat relay not activated White smoke for cold start Start problems in cold climate 	 Preheat relay solenoid shorted
FMI 4	 Voltage below normal, or shorted to low source 	 Short Circuit -, Measuring line 	 Red engine shutdown lamp illuminated (13L engine CXU, CHU and GU only) Yellow electronic malfunction lamp illuminated 	• Faulty harness
			 Induction air is hot Preheat relay is impossible to turn off 	
FMI 5	 Current below normal or open circuit 	Open Circuit	 Preheat relay not activated White smoke for cold start Start problems in cold climate 	Faulty Preheat relayFaulty harness

ECM SPN 628, Program Memory – MID 128 SID 240

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	Check sum error	 Red engine shutdown lamp illuminated 	 Engine Control Module (ECM) software
			 Engine will not start 	
FMI 11	 Root cause not known 	 Bad software configuration 	 MIL illuminated Engine will not start 	 Engine Control Module (ECM) software

FMI 12	 Bad intelligent device or component 	 Error on code-part of flash RAM or erased vendor area 	 Red engine shutdown lamp illuminated Nothing functions 	 Engine Control Module (ECM) software Engine Control Module (ECM)
FMI 14	Special instructions	• VIN not loaded yet	 Flashing MIL Engine will not start 	VIN missing

ECM SPN 629, Electronic Control Unit (ECU) 1 – MID 128 SID 254

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 8	 Abnormal frequency or pulse width or period 	Self test failure	 Red engine shutdown lamp illuminated Not possible to program Engine Control Module 	Engine Control Module (ECM)
FMI 12	 Bad intelligent device or component 	 Self test failure 	 (ECM) Red engine shutdown lamp illuminated Engine will not start 	Engine Control Module (ECM)

ECM SPN 630, Calibration Memory - MID 128 SID 253

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	Check sum error	 Red engine shutdown lamp illuminated Engine will not start 	 Engine Control Module (ECM) software

FMI 12	 Bad intelligent device or component 	Check sum error	 Red engine shutdown lamp illuminated 	Engine Control Module (ECM)
			 Engine will not start 	
FMI 14	 Special instructions 	 VIN not loaded yet 	 Red engine shutdown lamp illuminated 	 Engine Control Module (ECM) software
			 Loss of log data and some user configurable data 	

ECM SPN 631, Calibration Module – MID 128 PSID 77/PSID 124

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Check sum error	• Engine will not start	Software error
FMI 8	 Abnormal frequency or pulse width or period 	 Reset of ECM does not work 	 Engine will not start 	Software error

ECM SPN 633, Engine Fuel Actuator 1 Control Command - MID 128 SID 18

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 Yellow electronic malfunction lamp illuminated Valve constantly shut 	Faulty solenoidFaulty harnessFaulty ECM driver
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 Yellow electronic malfunction lamp illuminated High fuel consumption due to fuel leakage 	 Faulty solenoid Faulty harness Faulty ECM driver
FMI 5	 Current below normal or open circuit 	Open circuit	 Yellow electronic malfunction lamp illuminated Valve constantly shut 	 Faulty solenoid Faulty harness

ECM SPN 636, Camshaft Position Sensor (CMP) – MID 128 SID 21

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Phase Error Incorrect correlation between CMP and crankshaft position (CKP) sensor 	 MIL illuminated Increase in fuel consumption 	• Engine timing
FMI 3	 Voltage above normal, or shorted to high source 	 Missing Signal from CMP sensor Open in the CMP sensor circuit Short to battery in the CMP sensor circuit Short to ground in the CMP sensor circuit 	 MIL illuminated Possible loss of engine power Increased engine start time 	• Faulty harness
FMI 8	 Abnormal frequency or pulse width or period 	 Noisy Signal from CMP sensor Open in the CMP sensor circuit 	 MIL illuminated Possible loss of engine power Increased engine start time 	Faulty CMP sensorFaulty harness

ECM SPN 637, Crankshaft Position Sensor (CKP) – MID 128 SID 22

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	• Data erratic, intermittent or incorrect	 Intermittent or weak signal 	 MIL illuminated Yellow electronic malfunction lamp illuminated Increased fuel consumption Imprecise engine timing Increased fuel consumption Uneven cylinder balancing Power loss Smoke 	 Faulty CKP sensor harness Faulty CKP sensor
FMI 3	 Voltage above normal, or shorted to high source 	 Missing Signal CKP sensor Open in the CKP sensor circuit Short to battery in the CKP sensor circuit Short to ground in the CKP sensor circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Possible loss of engine power Increased fuel consumption 	 Faulty CKP sensor harness Faulty CKP sensor
FMI 8	• Abnormal frequency or pulse width or period	 Erratic or intermittent signal from CKP sensor Open in the CKP sensor 	 MIL illuminated Yellow electronic malfunction lamp illuminated Possible loss of engine power Increased engine start time Increased fuel consumption Uneven cylinder balancing Power loss Smoke 	 Faulty CKP sensor harness Faulty CKP sensor mounting

ECM SPN 639, SAE J1939 Data Link 1 – MID 128 SID 231

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 SAE J1939 high or low circuit shorted + SAE J1939 high or low circuit shorted - SAE J1939 high or low circuit open 	• MIL illuminated	• Faulty harness or connector

ECM SPN 641, Engine Variable Geometry Turbocharger (VGT) Actuator 1 – MID 128 SID 27

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Engine Variable Geometry Turbocharger (VGT) actuator temperature out of range 	 Possible Red engine shutdown lamp illuminated (dependant on severity) Yellow electronic malfunction lamp illuminated Possible engine derate 	• N/A
FMI 2	 Data erratic, intermittent or incorrect 	 Engine Variable Geometry Turbocharger (VGT) actuator has not seen a valid command on CAN2 data link Incorrect data 	 MIL illuminated Yellow electronic malfunction lamp illuminated Low boost Low power Nozzle opens Smoke from engine 	Disturbance on CAN2 data link
FMI 4	 Voltage below normal, or shorted to low source 	Short to ground	 MIL illuminated Yellow electronic malfunction lamp illuminated Nozzle will open resulting in low power and low boost VGT actuator will continue to attempt and maintain target nozzle position 	 Faulty VGT actuator connector Faulty VGT actuator harness Low battery voltage

FMI 7	 Mechanical system not responding or out of adjustment 	 Mechanical problem with the Engine Variable Geometry Turbocharger (VGT) actuator 	 MIL illuminated Yellow electronic malfunction lamp illuminated Low boost and smoke Possible engine derate Power loss in some cases when actuator motor has been disabled 	 VGT actuator motor effort is temporarily limited to prevent overheating Restrictions detected when running learn sequence VGT actuator is slow to follow commands VGT actuator position is not tracking command
FMI 9	 Abnormal update rate 	 Data from the Engine Variable Geometry Turbocharger (VGT) actuator has been missing for 2-seconds 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine derated (major) EGR valve closed 	 Data link harness No supply to VGT actuator VGT actuator VGT actuator connector
FMI 13	• Out of calibration	• Failed self- calibration	 Yellow electronic malfunction lamp illuminated 	VGT actuator

ECM SPN 642, Engine Variable Geometry Turbocharger (VGT) Actuator 2 – MID 128 PPID 89

Type of fault	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause
FMI 0	 Data valid but above normal operational range - Most severe level 	 VGT SRA temperature is critically high 	 Red engine shutdown lamp illuminated Engine derate 	 Coolant system malfunction Extreme driving conditions Overheated VGT actuator
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 VGT SRA temperature is moderately too high 	 Yellow electronic malfunction lamp illuminated Engine derate 	 Coolant system malfunction Extreme driving conditions Overheated VGT actuator

ECM SPN 647, Engine Fan Clutch Output Device Driver - MID 128 SID 33

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Short to positive in the cooling fan control circuit 	 Yellow electronic malfunction lamp illuminated Increased fuel consumption 	 Faulty cooling fan actuator Faulty cooling fan actuator harness or connector
			 Fan runs at full speed 	

FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground in the cooling fan control circuit Output voltage is 1/3 the supply voltage 	 Yellow electronic malfunction lamp illuminated Fan always deactivated or always activated if fault is intermittent 	 Faulty cooling fan actuator Faulty cooling fan actuator harness or connector
FMI 5	 Current below normal or open circuit 	 Open in the cooling fan control circuit 	 Increased fuel consumption Fan runs at full speed 	 Faulty cooling fan actuator Faulty cooling fan actuator harness or connector

ECM SPN 651, Engine Injector Cylinder 1 – MID 128 SID 1

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Harness shorted + low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	• Faulty harness
FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	Faulty harnessFaulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	• Out of calibration	 Cylinder balancing data above limit 	 MIL illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	Misfire detected	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 652, Engine Injector Cylinder 2 – MID 128 SID 2

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Harness shorted + low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	• Faulty harness
FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	Faulty harnessFaulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	• Out of calibration	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	• Misfire detected	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 653, Engine Injector Cylinder 3 – MID 128 SID 3

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Harness shorted + low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss 	 Faulty harness
			 Engine running uneven (misfire) 	

FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	Faulty harnessFaulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	• Out of calibration	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 654, Engine Injector Cylinder 4 – MID 128 SID 4

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Harness shorted + low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	• Faulty harness
FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	 Faulty harness Faulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel

FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	• Out of calibration	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	• Misfire detected	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 655, Engine Injector Cylinder 5 – MID 128 SID 5

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	• Harness shorted + low side circuit	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	• Faulty harness
FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	Faulty harnessFaulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	 Out of calibration 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	• Misfire detected	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 656, Engine Injector Cylinder 6 – MID 128 SID 6

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Harness shorted + low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	• Faulty harness
FMI 5	 Current below normal or open circuit 	 Harness shorted +, – or open high side circuit Harness shorted – low side circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated Engine power loss Engine running uneven (misfire) 	Faulty harnessFaulty engine fuel injector
FMI 7	 Mechanical system not responding properly 	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 8	 Abnormal frequency, pulse width, or period 	 Misfire detected 	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)
FMI 13	• Out of calibration	 Cylinder balancing data above limit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 PTO engaged without ECM knowing Faulty engine fuel injector Low cylinder compression Damaged or flywheel
FMI 31	Condition exists	• Misfire detected	MIL illuminatedRough engine idle	 Faulty engine fuel injector (possibly clogged)

ECM SPN 677, Engine Starter Motor Relay – MID 128 SID 39

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 Yellow electronic malfunction lamp illuminated Engine will not start 	Faulty starter relayFault harness

FMI 5	 Current below normal or open circuit 	Open circuit	 Yellow electronic malfunction lamp illuminated Engine will not start 	Faulty starter relayFault harness
-------	--	--------------	---	--

ECM SPN 729, Intake Air Heater (IAH) 1 – MID 128 SID 70

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted +, measuring line 	 Yellow electronic malfunction lamp illuminated 	Faulty preheat relayFaulty intake air heater (IAH) 1
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted –, measuring line 	 Yellow electronic malfunction lamp illuminated 	 Faulty preheat relay Faulty intake air heater (IAH) 1
FMI 5	 Current below normal or open circuit 	Open circuit	 Yellow electronic malfunction lamp illuminated 	• Faulty intake air heater (IAH) 1

ECM SPN 730, Intake Air Heater (IAH) 2 – MID 128 SID 71

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted +, measuring line 	 Yellow electronic malfunction lamp illuminated 	Faulty preheat relayFautly intake air heater (IAH) 2
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted –, measuring line 	 Yellow electronic malfunction lamp illuminated 	 Faulty preheat relay Fautly intake air heater (IAH) 2

FMI 5	 Current below normal or open circuit 	• Open circuit	 Yellow electronic malfunction lamp illuminated 	• Fautly intake air heater (IAH) 2
-------	--	----------------	--	------------------------------------

ECM SPN 975, Estimated Percent Fan Speed - (MID 128 PID 26)

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Missing signal from Fan Speed Sensor Short Circuit +, Measuring line Short Circuit -, Measuring line Open Circuit, Measuring line Open Circuit, Ground line 	 Higher fuel consumption Will work as on/off fan, 100%fan speed if cooling is needed 	 Cooling Fan Speed (CFS) sensor failure Faulty Cooling Fan Speed (CFS) sensor harness

ECM SPN 1072, Engine Compression Brake Output #1 – MID 128 PPID 122

Type of fault	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause
FMI 1	 Data valid but below normal operational range - Most severe level 	 Below range 	 No Engine Compression Brake 	 Low engine oil temperature
FMI 3	 Voltage above normal, or shorted to high source 	• Short Circuit +	 Yellow electronic malfunction lamp illuminated Engine Compression Brake can not be turned on Engine brake function derated Gear shift performance derated for some automatic transmissions 	 Faulty Engine Compression Brake actuator Faulty harness
FMI 4	 Voltage below normal, or shorted to low source 	• Short Circuit -	 Yellow electronic malfunction lamp illuminated Compression brake can not be turned off Engine stops running Engine impossible to restart 	 Faulty Engine Compression Brake actuator Faulty harness
FMI 5	 Current below normal or open circuit 	• Open Circuit	 Yellow electronic malfunction lamp illuminated Compression rake can not be turned on Engine brake function derated Gear shift performance derated for some automatic transmission boxes 	 Faulty Engine Compression Brake actuator Faulty harness

ECM SPN 1127, Engine Turbocharger Intake Manifold Pressure (IMP) – MID 128 PSID 98

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range 	 Engine Turbocharger boost pressure is too high 	 MIL illuminated (13L engine only) Turbocharger surge 	 EGR system failure Faulty Turbocharger oulet pressure sensor
FMI 1	 Data valid but below normal operational range 	 Engine Turbocharger boost pressure is too low 	 MIL illuminated (13L engine only) Engine derate Engine slow to respond 	 Air leak in turbocharger hoses, pipes, brackets, cooler or components EGR system fault
FMI 10	 Abnormal rate of change 	 Poor Engine Turbocharger boost pressure response 	 MIL illuminated Engine power loss/re- sponse/drivability 	Turbocharger inlet air system leakFaulty Turbocharger
FMI 11	 Root cause not known 	• Variable Geometry Turbocharger control mode fault	 MIL illuminated 	Variable Geometry Turbocharger fault
FMI 13	Out of calibration	 Variable Geometry Turbocharger control mode adjustment exceeded 	 Engine power loss/re- sponse/drivability 	 Air leak in turbocharger hoses, pipes, brackets, cooler or components EGR system fault Faulty Turbocharger oulet pressure sensor Exhaust back pressure too high
FMI 14	 Special instructions 	 Poor Engine Turbocharger boost pressure response 	 MIL illuminated 	 Air leak in turbocharger hoses, pipes, brackets, cooler or components Variable Geometry Turbocharger fault Oil pressure fault
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Engine Turbocharger boost pressure is too high 	 MIL illuminated (13L engine only) Turbocharger surge 	EGR system failureFaulty sensor
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Engine Turbocharger boost pressure is too low 	 MIL illuminated (13L engine only) Engine derate Engine slow to respond 	 Air leak in turbocharger hoses, pipes, brackets, cooler or components EGR system failure

ECM SPN 1136, Engine Control Module (ECM) Temperature – MID 128 PPID 55

Type of fault	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause
FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground on the metering circuit 	• N/A	Engine Control Module (ECM)
FMI 5	 Current below normal or open circuit 	 Short to battery in the metering circuit 	• N/A	Engine Control Module (ECM)
		 Open in the metering circuit 		
		• Open circuit in the ground circuit		

ECM SPN 1198, Anti-theft Random Number - MID 128 PID 224

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Engine Control Module and Instrument Control Module security codes do not match 	 Yellow electronic malfunction lamp illuminated Can start engine 	 Security system failure
FMI 12	 Bad intelligent device or component 	 Security system not installed 	 Yellow electronic malfunction lamp illuminated Can start engine 	 Security system failure

ECM SPN 1231, SAE J1939 Data Link 2 – MID 128 PSID 229/232

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Circuit shorted + Circuit shorted – Open circuit 	 MIL illuminated Engine power loss No Aftertreatment Diesel Exhaust Fluid (DEF) dosing No variable geometry engine turbocharger control 	• Faulty harness
FMI 9	 Abnormal update rate 	 Missing signal from Transmission Control Module (TCM) 	 MIL illuminated Yellow electronic malfunction lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 SAE J1939 data link Faulty harness or connectors DEF pump Aftertreatment Diesel Exhaust Fluid (DEF) control module

ECM SPN 1265, Engine Piston Cooling Oil Pressure Actuator – MID 128 SID 85

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	• Circuit shorted +	 Yellow electronic malfunction lamp illuminated Possible smoke during start up 	Faulty harnessFaulty actuator
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 Red engine shutdown lamp illuminated Engine damage can occur without piston cooling 	Faulty harnessFaulty actuator
FMI 5	 Current below normal or open circuit 	Open circuit	 Yellow electronic malfunction lamp illuminated Possible smoke during start up 	Faulty harnessFaulty actuator

ECM SPN 1322, Engine Misfire for Multiple Cylinders – MID 128 PSID 27

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 8	 Abnormal frequency or pulse width or period 	 Cylinder misfires detected in multiple cylinders 	MIL illuminatedRough idle	 Engine fuel injectors
FMI 31	Condition exists	 Cylinder misfires detected in multiple cylinders 	MIL illuminatedRough idle	 Engine fuel injectors

ECM SPN 1659, Engine Coolant System Thermostat – MID 128 PSID 109

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding or out of adjustment 	Thermostat stuck closed	 Possible poor drivability 	Coolant thermostat
FMI 12	 Bad intelligent device or component 	 Thermostat is leaking or stuck open 	 MIL illuminated (13L engine only) Longer engine warm up time Poor heat in cab 	Coolant thermostat

ECM SPN 1675, Engine Starter Mode – MID 128 SID 39

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Starter overheating 	 Engine will not start 	 Starter is deactivated due to overheating
FMI 7	 Mechanical system not responding or out of adjustment 	 Transmission not in neutral 	 Engine will not start 	 Starter is deactivated due to overheating
FMI 10	 Abnormal rate of change 	 Starter gear is stuck, engaged with engine 	 Engine will not start 	 Starter is deactivated due to overheating
FMI 14	Special instructions	 PTO is engaged or switch on 	 Engine will not start 	 Starter is deactivated due to overheating

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range — most severe level 	 Truck has idled too long without completing a periodic heat mode 	 Red engine shutdown lamp illuminated Engine derate High temperature spikes in DPF when driving is resumed or during stationary regeneration 	 Extremely cold ambient temperatures PTO operated with limited exhaust temperatures Engine turbocharger Engine turbocharger compressor bypass valve
FMI 7	 Mechanical system not responding or out of adjustment 	 Truck has idled too long without completing a periodic heat mode 	 Yellow electronic malfunction lamp illuminated White exhaust smoke High temperature spikes in DPF when driving is resumed or during stationary regeneration 	 Extremely cold ambient temperatures PTO operated with limited exhaust temperatures Engine turbocharger Engine turbocharger compressor bypass valve
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Truck has idled too long without completing a periodic heat mode 	 Yellow electronic malfunction lamp illuminated White exhaust smoke High temperature spikes in DPF when driving is resumed or during stationary regeneration 	 Extremely cold ambient temperatures PTO operated with limited exhaust temperatures Engine turbocharger Engine turbocharger compressor bypass valve

ECM SPN 1677, Aftertreatment DPF Auxiliary Heater Mode – MID 128 PSID 25

ECM SPN 1761, Aftertreatment Diesel Exhaust Fluid (DEF) Tank Level – PPID 278

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Short circuit high side 	• N/A	 DEF tank pickup assembly/sensor failure
FMI 5	 Current below normal or open circuit 	Short circuit +Open circuit	 Yellow electronic malfunction lamp illuminated 	 DEF tank pickup assembly/sensor failure

FMI 11	 Root cause not known 	 DEF tank level low (driver warning) 	 Low DEF fluid lamp illuminated 	• N/A
FMI 14	 Special Instructions 	 DEF tank almost empty (driver warning) 	 Low DEF fluid lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	• N/A
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 DEF tank almost empty (driver warning) 	 Low DEF fluid lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	• N/A

ECM SPN 2003, Transmission Control Module (TCM) Status – MID 128 PSID 205

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 Missing signal from Transmission Control Module (TCM) 	• N/A	• Data link error

ECM SPN 2017, Cruise Control Status – MID 128 PID 85

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 9	 Abnormal update rate 	 Missing (Cruise Control) signal from VECU 	 Cruise Control does not work 	 No clutch information to Engine Control Module (ECM) from SAE J1939 data link

ECM SPN 2029, Invalid or Missing Data from Vehicle ECU – MID 128 PSID 201

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 8	 Abnormal frequency or pulse width or period 	 No contact with VECU 	 Yellow electronic malfunction lamp illuminated 	 Faulty harness
			 PTO, engine compression brake and cruise control do not work 	
FMI 9	 Abnormal update rate 	 Missing signal from cluster 	 MIL illuminated (13L engine only) 	 Faulty harness

ECM SPN 2629, Engine Turbocharger Compressor Outlet Temperature – MID 128 PID 404

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Estimated engine turbocharger discharge temperature error. 	 Engine derate 	 High ambient temperature Low barometric pressure Leak in engine turbocharger inlet tube
FMI 2	 Data erratic, intermittent or incorrect 	 Engine turbocharger outlet temperature signal believed to be not valid (high) (plausibility fault) 	 Engine derate MIL illuminated 	 Engine turbocharger outlet temperature sensor
FMI 4	 Voltage below normal, or shorted to low source 	 Short circuit -, measuring line 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Faulty sensor Faulty harness
FMI 5	 Current below normal or open circuit 	 Short circuit +, measuring line Open circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	Faulty sensorFaulty harness
FMI 13	• Out of calibration	 Sensor out of range 	MIL illuminated	 Faulty sensor
FMI 15	 Data valid but above normal operating range - Least severe level 	 Sensor out of range 	• MIL illuminated	 Faulty sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Sensor out of range 	 MIL illuminated 	 Faulty sensor

ECM SPN 2659, Engine Exhaust Gas Recirculation (EGR) Mass Flow Rate – MID 128 PPID 35

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI0)	 Data valid but above normal operational range 	 EGR flow is too high 	MIL illuminatedExhaust smoke	 Faulty EGR system

FMI 1	 Data valid but below normal operational range 	• EGR flow is too low	 MIL illuminated 	Faulty EGR systemClogged EGR cooler
FMI 16	 Data valid but above normal operating range - Moderately severe level 	• EGR flow is too high	 MIL illuminated Exhaust smoke 	Faulty EGR systemFaulty harness or connector
FMI 18	 Data valid but below normal operating range - Moderately severe level 	• EGR flow is too low	• MIL illuminated	 Faulty EGR system Clogged EGR cooler Faulty harness or connector

ECM SPN 2791, Engine Exhaust Gas Recirculation (EGR) Valve Control – MID 128 SID 146

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Stuck EGR valve EGR valve circuit shorted + EGR valve circuit shorted to – 	 MIL illuminated Engine derate 	 Faulty harness or connector Faulty EGR valve
FMI 5	 Current below normal or open circuit 	 Open EGR valve circuit 	MIL illuminatedEngine derate	Faulty harness or connectorFaulty EGR valve

ECM SPN 2836, Battery Potential/Switched Voltage - MID 128 PSID 49

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Battery voltage too high 	• N/A	Faulty cab or chassis harnessCharging system faultExternal charger
FMI 4	 Voltage below normal, or shorted to low source 	 Battery voltage too low 	 Starter will not crank 	 Faulty cab or chassis harness Charging system fault Battery Fuse

ECM SPN 3031, Aftertreatment Diesel Exhaust Fluid (DEF) Tank Temperature – MID 128 PPID 274

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Aftertreatment Diesel Exhaust Fluid (DEF) tank temperature too high Date data message missing on SAE J1587 data link. (Cluster error). 	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 DEF tank pickup assembly/sensor failure
FMI 4	 Voltage below normal, or shorted to low source 	Short Circuit -	 MIL illuminated 	 DEF tank pickup assembly/sensor failure DEF tank pickup asssembly/sensor wiring or connectors
FMI 5	 Current below normal or open circuit 	 Short Circuit + Open Circuit 	 MIL illuminated 	 DEF tank pickup assembly/sensor failure DEF tank pickup assembly/sensor wiring or connectors
FMI 8	 Abnormal frequency or pulse width or period 	 Sensor ripple is not too high 	• N/A	 DEF tank pickup assembly/sensor failure DEF tank pickup 'assembly/sensor wiring or connectors

ECM SPN 3064, Aftertreatment DPF System Monitor - MID 128 PPID 326

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Moderately high soot load 	 Yellow electronic malfunction lamp illuminated Medium to high engine derate 	 Diesel Particulate Filter (DPF) clogged After Treatment Fuel Injector clogged Regeneration disabled by driver or other component
FMI 10	 Abnormal rate of change 	 Soot loading high due to heavy load or use (no problem) 	 Yellow electronic malfunction lamp illuminated Engine derate 	 No error, condition occurs during heavy load or use with high soot loading
FMI 11	 Root cause not known 	 Critically high soot load 	 Red engine shutdown lamp illuminated High engine derate Engine derate 	 Diesel Particulate Filter (DPF) clogged Aftertreatment hydrocarbon doser (injector) Regeneration disabled by driver or other component

ECM SPN 3216, Aftertreatment Intake NOx – MID 128 PPID 348

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Inlet NOx sensor error (plausibility) 	 MIL illuminated 	Engine out NOx highFaulty NOx sensor
FMI 3	 Voltage above normal, or shorted to high source 	 Short Circuit, NOx signal 	 MIL illuminated 	 Faulty wiring between NOx sensor and NOx sensor ECU Faulty NOx sensor
FMI 5	 Current below normal or open circuit 	 Open Circuit, NOx signal 	 MIL illuminated 	 Faulty wiring between NOx sensor and NOx sensor ECU Faulty NOx sensor
FMI 9	 Abnormal update rate 	 Missing signal from NOx sensor 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Loss of communication from NOx sensor ECU and Engine Control Module (ECM)
FMI 11	 Root cause not known 	 NOx sensor measures near zero for long time with high load 	 MIL illuminated 	 Faulty NOx sensor
FMI 12	 Bad intelligent device or component 	 NOx-sensor signal corrupt (incorrect value) 	• MIL illuminated	 Faulty NOx sensor
FMI 13	• Out of calibration	 NOx-sensor activation (incorrect value) 	• MIL illuminated	 Faulty NOx sensor
FMI 14	Special instructions	 Missing signal from sensor due to battery voltage 	 MIL illuminated 	 Voltage to NOx sensor is too high or too low Faulty harness to sensor

ECM SPN 3226, Aftertreatment Outlet NOx - MID 128 PPID 270/ PSID 90

MID 233 Fault code sent by MID 128 Engine control unit

Type of fault	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause
FMI 2)	 Data erratic, intermittent or incorrect 	 Inlet NOx sensor error (plausibility) Mismatch between sensors 	 MIL illuminated 	 Engine out NOx high Faulty NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) quality
FMI 3	 Voltage above normal or shorted to high source 	 Short Circuit, NOx signal 	 MIL illuminated 	 Faulty wiring between NOx sensor and NOx sensor ECU Faulty NOx sensor
FMI 5	 Current below normal or open circuit 	 Open Circuit, NOx signal 	 MIL illuminated 	 Faulty wiring between NOx sensor and NOx sensor ECU Faulty NOx sensor

MID 233 Fault code sent by MID 128 Engine control unit (cont'd.)

FMI 9	 Abnormal update rate 	 Missing signal from NOx sensor 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Loss of communication from NOx sensor ECU and Engine Control Module (ECM)
FMI 11	 Root cause not known 	 NOx sensor measures near zero for long time with high load 	MIL illuminated	 Faulty NOx sensor
FMI 12	 Bad intelligent device or component 	 NOx-sensor signal corrupt (incorrect value) 	 MIL illuminated 	 Faulty NOx sensor
FMI 13	• Out of calibration	 NOx-sensor activation (incorrect value) 	 MIL illuminated 	 Faulty NOx sensor
FMI 14	 Special instructions 	 Missing signal from sensor due to battery voltage 	 MIL illuminated 	 Voltage to NOx sensor is too high or too low Faulty harness to sensor
FMI 31	Condition exists	 Inlet NOx sensor error Mismatch between sensors 	 MIL illuminated 	 Engine out NOx high Faulty NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) quality

ECM SPN 3245, Aftertreatment DPF Outlet Temperature – MID 128 PPID 436

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Temperature critically too high 	• Low engine power	Restricted CatalystIntake air leakFaulty sensor
FMI 2	 Data erratic, intermittent or incorrect 	 Sensor is not rational (plausibility) 	 MIL illuminated Regeneration not possible 	 Faulty sensor Exhaust system leak Faulty harness connectors or connections
FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground on the metering side of the circuit 	 MIL illuminated Regeneration not possible 	 Faulty harness Faulty sensor Aftertreatment control module (ACM)

FMI 5	 Current below normal or open circuit 	 Short to battery on the metering side of the circuit Open in the metering side of the circuit Open in the ground side of the circuit 	MIL illuminated	 Faulty harness Faulty sensor Aftertreatment control module (ACM)
FMI 15	 Data valid but above normal operating range - Least severe level 	 Temperature sensor is out of range (high) Sensor indicates a invalid value 	 MIL illuminated 	Faulty harnessFaulty sensor

ECM SPN 3249, Aftertreatment DPF Intake Temperature – MID 128 PPID 387

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Sensor is not rational (plausibility) 	 MIL illuminated Aborted regeneration 	 Faulty harness Faulty harness connectors or connections Exhaust system leak Faulty sensor
FMI 4	 Voltage below normal, or shorted to low source 	 Short to ground on the metering side of the circuit 	 MIL illuminated Aborted regeneration 	 Faulty harness Faulty sensor Aftertreatment control module (ACM)
FMI 5	 Current below normal or open circuit 	 Short to battery on the metering side of the circuit Open in the metering side of the circuit Open in the ground side of the circuit 	 MIL illuminated Regeneration not possible 	 Faulty harness Faulty sensor Aftertreatment control module (ACM)
FMI 15	 Data valid but above normal operating range - Least severe level 	 Temperature sensor is out of range (high) Sensor indicates a invalid value 	 MIL illuminated 	Faulty harnessFaulty sensor

ECM SPN 3251, Aftertreatment DPF Differential Pressure – MID 128 PID 81

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range 	 Critically high pressure 	 Engine derate Red engine shutdown lamp illuminated 	 Aftertreatment diesel particulate filter (DPF) differential pressure sensor failure
FMI 2	 Data erratic, intermittent or incorrect 	 Sensor is not rational 	• MIL illuminated	 Aftertreatment diesel particulate filter (DPF) differential pressure sensor failure
FMI 3	 Voltage above normal, or shorted to high source 	 Short to battery on the metering side Open in the ground line 	• MIL illuminated	 Aftertreatment diesel particulate filter (DPF) differential pressure sensor failure Faulty aftertreatment diesel particulate filter (DPF) differential pressure sensor connector Faulty harness
FMI 5	 Current below normal or open circuit 	 Open in 5 volt supply line Short to ground in metering line Open in metering line 	• MIL illuminated	 Aftertreatment diesel particulate filter (DPF) differential pressure sensor failure Faulty harness
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Moderately high pressure 	• Engine derate	 Aftertreatment diesel particulate filter (DPF) differential pressure sensor failure

ECM SPN 3363, Aftertreatment Diesel Exhaust Fluid (DEF) Tank Heater – MID 128 PSID 75

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 Commanded valve position is not plausible 	• N/A	 Faulty harness or connectors Aftertreatment DEF tank temperature sensor Aftertreatment DEF tank heating valve
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	• N/A	Aftertreatment DEF pump assembly
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted – Open circuit 	• N/A	 Aftertreatment DEF pump assembly
FMI 5	 Current below normal or open circuit 	Open circuit	• N/A	 Aftertreatment DEF pump assembly

ECM SPN 3471, Aftertreatment Fuel Pressure Control Actuator – MID 128 PPID 328

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted to battery 	 MIL illuminated Yellow electronic malfunction lamp illuminated Aborted regeneration 	Faulty harnessActuator failure
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted to ground 	 MIL illuminated Yellow electronic malfunction lamp illuminated Aborted regeneration 	Faulty harnessActuator failure
FMI 5	 Current below normal or open circuit 	• Open circuit	 MIL illuminated Yellow electronic malfunction lamp illuminated Aborted regeneration 	Faulty harnessActuator failure
FMI 7	 Mechanical system not responding or out of adjustment 	 Aftertreatment hydrocarbon doser fuel pressure too low 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Fuel shut off valve stuck open Faulty fuel pressure sensor
FMI 14	Special instructions	 Aftertreatment hydrocarbon doser fuel pressure too high 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	• Fuel shut off valve leakage

ECM SPN 3480, Aftertreatment Diesel Particulate Filter (DPF) Fuel Pressure – MID 128 PPID 437/PSID 108

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 2	 Data erratic, intermittent or incorrect 	 DPF fuel pressure sensor is not rational (plausibility) Aftertreatment hydrocarbon hydrocarbon doser fuel pressure too low 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty aftertreatment fuel shut off valve Faulty DPF fuel pressure sensor Air in fuel Fuel filter Aftertreatment fuel pump
FMI 3	 Voltage above normal or shorted to high source 	 Short to battery on the metering side Open in the ground line 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty harness Faulty DPF fuel pressure sensor
FMI 5	 Current below normal or open circuit 	 Open circuit in the 5 volt supply Short circuit to ground in the metering line Open circuit in the metering line 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty harness Faulty DPF fuel pressure sensor
FMI 7	 Mechanical system not responding or out of adjustment 	 Mechanical problem 	 MIL illuminated Engine derate Possible engine shutdown Regeneration not possible 	 Faulty aftertreatment hydrocarbon doser system Aftertreatment hydrocarbon doser Faulty aftertreatment fuel shut off valve Aftertreatment fuel pump
FMI 10	 Abnormal rate of change 	 Aftertreatment hydrocarbon doser fuel pressure sensor stuck Aftertreatment hydrocarbon doser fuel pressure too high 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty fuel pressure sensor Faulty shut off valve Aftertreatment hydrocarbon doser (injector)
FMI 15	 Data valid but above normal operating range - Least severe level 	 Fuel pressure sensor is out of range Sensor indicates a invalid value 	 MIL illuminated 	 Faulty fuel pressure sensor

ECM SPN 3483, Aftertreatment Regeneration Status – MID 128 PSID 47

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Unable to achieve needed aftertreatment temperature 	 MIL illuminated Possible incomplete regeneration 	 Aftertreatment hydrocarbon doser clogged Aftertreatment hydrocarbon doser fuel pressure too low
FMI 1	 Data valid but below normal operational range 	 Aftertreatment temperature too high 	 MIL illuminated Possible incomplete regeneration 	 Aftertreatment hydrocarbon doser clogged Aftertreatment hydrocarbon doser fuel pressure too high Injector leakage (engine)
FMI 10	 Abnormal rate of change 	 Regeneration period too long 	 MIL illuminated Regeneration frequency too high 	 Aftertreatment hydrocarbon doser Air leakage Faulty injector(s) (engine)
FMI 12	 Bad intelligent device or component 	 Regeneration efficiency too low 	• N/A	 Aftertreatment hydrocarbon doser clogged Diesel Particulate Filter (DPF) catalyst damaged Diesel Particulate Filter (DPF) catalyst clogged
FMI 13	Out of Calibration	 Regeneration period too long 	 MIL illuminated Regeneration frequency too high 	 Aftertreatment hydrocarbon doser Air leakage Fuel line clogged
FMI 15	 Data valid but above normal operating range - Least severe level 	 Unable to achieve needed temperature 	 MIL illuminated Possible incomplete regeneration 	 Aftertreatment hydrocarbon doser clogged Aftertreatment hydrocarbon doser fuel pressure too low
FMI 17	 Data valid but below normal operating range - Least severe level 	 Aftertreatment temperature too high 	 MIL illuminated Possible incomplete regeneration 	 Aftertreatment hydrocarbon doser clogged Aftertreatment hydrocarbon doser fuel pressure too high Injector leakage (engine)
FMI 31	Condition exists	 Regeneration period too long 	 MIL illuminated Regeneration frequency too high 	 Aftertreatment hydrocarbon doser Air leakage Fuel line clogged

ECM SPN 3509, Sensor Supply Voltage 1 – MID 128 SID 232

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Sensor supply voltage out of range (high) 	 MIL illuminated Incorrect sensor values 	• Faulty harness or connector
FMI 4	 Voltage below normal, or shorted to low source 	 Sensor supply voltage out of range (low) 	 MIL illuminated Incorrect sensor values 	• Faulty harness or connector

ECM SPN 3510, Sensor Supply Voltage 2 – MID 128 SID 211

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 MIL illuminated Incorrect sensor values 	 Faulty harness or connector
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 MIL illuminated Incorrect sensor values 	 Faulty harness or connector

ECM SPN 3511, Sensor Supply Voltage 3 – MID 128 PSID 113

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 MIL illuminated 	 Faulty harness
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 MIL illuminated 	 Faulty harness

ECM SPN 3512, Sensor Supply Voltage 4 – MID 128 PSID 126

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Sensor supply circuit shorted + 	 MIL illuminated Incorrect sensor values 	 Faulty harness
FMI 4	 Voltage below normal, or shorted to low source 	 Sensor supply circuit shorted – 	 MIL illuminated Incorrect sensor values 	 Faulty harness

ECM SPN 3522, Aftertreatment Total Fuel Used – MID 128 PSID 91

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range 	 Aftertreatment Diesel Exhaust Fluid (DEF) level change too much 	• N/A	 DEF system leak Wrong DEF tank Aftertreatment DEF Dosing Module failure or wrong module
FMI 1	 Data valid but below normal operational range 	 Aftertreatment Diesel Exhaust Fluid (DEF) level change too little 	• N/A	 DEF tank level sensor stuck DEF system clog Wrong DEF tank Aftertreatment DEF Dosing Module failure or wrong module
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 Aftertreatment Diesel Exhaust Fluid (DEF) level change too much 	• N/A	 DEF system leak Wrong DEF tank Aftertreatment DEF Dosing Module failure or wrong module
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Aftertreatment Diesel Exhaust Fluid (DEF) level change too little 	• N/A	 DEF tank level sensor stuck DEF system clog Wrong DEF tank Aftertreatment DEF Dosing Module failure or wrong module

ECM SPN 3556, Aftertreatment Hydrocarbon Doser – MID 128 PPID 329

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted to battery 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty harness Aftertreatment hydrocarbon doser failure
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted to ground 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty harness Aftertreatment hydrocarbon doser failure
FMI 5	 Current below normal or open circuit 	Open circuit	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Faulty harness Aftertreatment hydrocarbon doser failure
FMI 13	• Out of calibration	 Aftertreatment hydrocarbon doser clogged 	• MIL illuminated	 Aftertreatment hydrocarbon doser failure Fuel shut off valve Fuel supply failure
FMI 14	Special instructions	 Aftertreatment hydrocarbon doser leaking 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible 	 Aftertreatment hydrocarbon doser failure

ECM SPN 3597, Aftertreatment Diesel Particulate Filter (DPF) Regeneration too Frequent – MID 128 PSID 119

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	• Circuit shorted +	• MIL illuminated	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 or 3 failure Aftertreatment DEF pump assembly failure Aftertreatment DEF tank heating valve failure Aftertreatment Control Module (ACM)
FMI 4	 Voltage below normal, or shorted to low source 	• Circuit shorted –	• MIL illuminated	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 or 3 failure Aftertreatment DEF pump assembly failure Aftertreatment DEF tank heating valve failure Aftertreatment Control Module (ACM)
FMI 5	 Current below normal or open circuit 	• Open circuit	• MIL illuminated	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 or 3 failure Aftertreatment DEF pump assembly failure Aftertreatment DEF tank heating valve failure Aftertreatment Control Module (ACM)

ECM SPN 3675, Engine Turbocharger Compressor Bypass Valve Position – MID 128 PPID 330

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted + On/off valve can't be activated 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible High engine braking without request Driveability affected 	 Faulty bypass valve solenoid Faulty harness Faulty harness connector
FMI 4	 Voltage below normal, or shorted to low source 	 Short circuit - Valve constantly activated 	 MIL illuminated Yellow electronic malfunction lamp illuminated Major engine derate Exhaust manifold overheating Engine shut down 	 Faulty bypass valve solenoid Faulty harness Faulty harness connector
FMI 5	 Current below normal or open circuit 	 Open circuit On/off valve can't be activated 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible High engine braking without request Driveability affected 	 Faulty bypass valve solenoid Faulty harness Faulty harness connector
FMI 7	 Mechanical system not responding or out of adjustment 	 Mechanically Stuck On/off valve can't be activated 	 MIL illuminated Yellow electronic malfunction lamp illuminated Regeneration not possible High engine braking without request Driveability affected Valve constantly activated 	 Leaking pipes Faulty bypass valve solenoid

1 1	
	 Major engine derate
	 Exhaust manifold overheating
	 Engine shut down

ECM SPN 3720, Aftertreatment DPF Ash Load Percent – MID 128 PPID 337

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Ash level too high 	 Yellow electronic malfunction lamp illuminated 	 Need service, ash level is too high

ECM SPN 3936, Aftertreatment DPF System – MID 128 PSID 28

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Aftertreatment DPF differential pressure sensor value too high 	 MIL illuminated 	 Aftertreatment DPF differential pressure sensor Aftertreatment particulate filter
FMI 1	 Data valid but below normal operational range - Most severe level 	 Aftertreatment DPF differential pressure sensor value too low 	 MIL illuminated 	 Aftertreatment DPF differential pressure sensor Aftertreatment particulate filter

ECM SPN 4094, NOx Limits Exceeded Due to Insufficient Diesel Exhaust Fluid (DEF) Quality – MID 128 PSID 90

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range - Most severe level 	 Aftertreatment Diesel Exhaust Fluid (DEF) dosing too low 	 Yellow electronic malfunction lamp illuminated Engine derate 	 DEF quality Aftertreatment DEF line clogged Aftertreatment DEF doser Aftertreatment control module failure
FMI 14	 Special Instructions 	 Aftertreatment Diesel Exhaust Fluid (DEF) dosing too low 	 Yellow electronic malfunction lamp illuminated Engine derate 	 DEF quality Aftertreatment DEF line clogged Aftertreatment DEF doser Aftertreatment control module failure
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Aftertreatment Diesel Exhaust Fluid (DEF) dosing too low 	 Yellow electronic malfunction lamp illuminated Engine derate 	 DEF quality Aftertreatment DEF line clogged Aftertreatment DEF doser Aftertreatment control module failure

ECM SPN 4095, NOx Limits Exceeded Due to Interrupted Diesel Exhaust Fluid (DEF) Dosing – MID 128 PSID 90

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding or out of adjustment 	 Dosing failure 	 MIL illuminated Aftertreatment Diesel Exhaust Fluid (DEF) low usage 	 DEF level Faulty DEF pump Leak in DEF hose

ECM SPN 4334, Afterteatment Diesel Exhaust Fluid (DEF) Dosing Absolute Pressure – MID 128 PPID 273

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range - Most severe level 	 DEF system leakage detected 	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 DEF pump DEF hose Aftertreatment Diesel Exhaust Fluid (DEF) doser (injector)
FMI 4	 Voltage below normal, or shorted to low source 	• Short Circuit -	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 DEF pump assembly
FMI 5	 Current below normal or open circuit 	 Short Circuit + Open Circuit 	 MIL illuminated Yellow electronic malfunction lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 DEF pump assembly

ECM SPN 4339, Aftertreatment SCR Feedback Control Status – MID 128 PSID 90

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Adaptation too high 	• N/A	 NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) dosing system failure

FMI 1	 Data valid but below normal operational range - Most severe level 	 Adaptation too low 	• N/A	 NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) dosing system failure DEF quality
FMI 10	 Abnormal rate of change 	 Adaptation too high 	• N/A	 NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) dosing system failure
FMI 12	 Bad intelligent device or component 	 Adaptation too low 	• N/A	 NOx sensor Aftertreatment Diesel Exhaust Fluid (DEF) dosing system failure DEF quality

ECM SPN 4354, Aftertreatment Diesel Exhaust Fluid (DEF) Line Heater 1 – MID 128 PSID 103

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	• Circuit shorted +	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 failure
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 failure
FMI 5	 Current below normal or open circuit 	Open circuit	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 1 failure

ECM SPN 4356, Aftertreatment Diesel Exhaust Fluid (DEF) Line Heater 3 – MID 128 PSID 102

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 3 failure

FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 3 failure
FMI 5	 Current below normal or open circuit 	Open circuit	• N/A	 Faulty harness Faulty connector Aftertreatment DEF line heater 3 failure

ECM SPN 4374, Aftertreatment Diesel Exhaust Fluid (DEF) Pump Motor Speed – MID 128 PSID 87

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range - Most severe level 	 Slow pump speed 	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure

ECM SPN 4375, Aftertreatment Diesel Exhaust Fluid Pump (DEF) Drive Percentage – MID 128 PSID 121

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	Circuit shorted +	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 1	 Data valid but below normal operational range - Most severe level 	 Circuit shorted – Open circuit 	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure

FMI 5	 Current below normal or open circuit 	Open circuit	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 12	 Bad intelligent device or component 	Open circuit	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 14	 Special instructions 	 Voltage to pump out of range 	 MIL illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure

ECM SPN 4376, Aftertreatment Diesel Exhaust Fluid (DEF) Return Valve – MID 128 PSID 105

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 MIL illuminated Not possible to perform afterrun 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 4	 Voltage below normal, or shorted to low source 	 Circuit shorted – Open circuit 	 MIL illuminated Not possible to perform afterrun 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 5	 Current below normal or open circuit 	Open circuit	 MIL illuminated Not possible to perform afterrun 	 Faulty harness Faulty connector Aftertreatment DEF pump assembly failure
FMI 7	 Mechanical system not responding or out of adjustment 	 Possible mechanical problem with aftertreatment diesel exhaust fluid (DEF) return valve 	 MIL illuminated Not possible to perform afterrun 	 Mechanical fault – DEF return line restricted between DEF pump and DEF tank Aftertreatment Diesel Exhaust Fluid (DEF) pump assembly

ECM SPN 4752, Engine Exhaust Gas Recirculation (EGR) Cooler Efficiency – MID 128 SID 282

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding or out of adjustment 	• Low EGR cooler efficiency	• MIL illuminated	• EGR cooler clogged or damaged

ECM SPN 4811, Engine Piston Cooling Oil Pressure – MID 128 PPID 8

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range - Most severe level 	 Pressure below range 	 Red engine shutdown lamp illuminated 	• N/A
FMI 3	 Voltage above normal or shorted to high source 	 Short to battery in metering line 	 Yellow electronic malfunction lamp illuminated 	 Faulty harness
FMI 5	 Current below normal or open circuit 	 Open in the metering side sensor circuit Open circuit in the ground line sensor circuit 	 Yellow electronic malfunction lamp illuminated 	Faulty sensorFaulty harness

ECM SPN 4813, Engine Oil Thermostat Bypass Valve Opening – MID 128 PSID 72

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	 Yellow electronic malfunction lamp illuminated Oil thermostat is always open 	Faulty actuatorFaulty harness

FMI 4	 Voltage below normal, or shorted to low source 	• Circuit shorted –	 Yellow electronic malfunction lamp illuminated Oil thermostat is always closed Engine may overheat 	Faulty actuatorFaulty harness
FMI 5	 Current below normal or open circuit 	• Open circuit	 Yellow electronic malfunction lamp illuminated Oil thermostat is always open May have increased fuel consumption 	Faulty actuatorFaulty harness

ECM SPN 4815, Engine Cooling Fan Thermal Switch Position – MID 128 PPID 333

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 3	 Voltage above normal, or shorted to high source 	 Circuit shorted to battery 	 Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty sensor
FMI 4	 Voltage below normal, or shorted to low source 	Short circuit -	 Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty sensor
FMI 5	 Current below normal or open circuit 	• Open circuit	 Yellow electronic malfunction lamp illuminated 	Faulty harnessFaulty harness connectorFaulty sensor

ECM SPN 5246, Aftertreatment SCR Operator Inducement Severity – MID 128 PSID 46

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Severe SCR system fault detected – Warning fault 	 Severe engine derate 	• N/A

FMI 15	 Data valid but above normal operating range - Least severe level 	 Moderate SCR system fault detected – Warning fault 	 Moderate engine derate 	• N/A
FMI 16	 Data valid but above normal operating range - Moderately severe level 	 SCR system fault detected – Warning fault 	 Engine derate 	• N/A

ECM SPN 5285, Charge Air Cooler (CAC) Temperature – MID 128 PID 52

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding properly 	 Boost temperature too high 	 MIL illuminated (13L engine only) 	 Air flow through charge air cooler (CAC) too low Charge air cooler (CAC)
FMI 18	 Data valid but below normal operating range 	 Boost temperature too high 	 MIL illuminated (13L engine only) 	 Air flow through charge air cooler (CAC) too low Charge air cooler (CAC)

ECM SPN 5298, Aftertreatment Diesel Oxidation Catalyst (DOC) Conversion Efficiency – MID 128 PSID 99

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding properly 	 Hydrocarbon conversion is too low in the Diesel Oxidation Catalyst (DOC) 	 MIL illuminated 	Catalyst failureDOC temperature sensor
FMI 18	 Data valid but below normal operating range - Moderately severe level 	 Hydrocarbon conversion is too low in the Diesel Oxidation Catalyst (DOC) 	 MIL illuminated 	 Catalyst failure DOC temperature sensor

ECM SPN 5392, Aftertreatment Diesel Exhaust Fluid (DEF) Dosing Valve Loss of Prime – MID 128 PSID 121

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 7	 Mechanical system not responding properly 	 Aftertreatment Diesel Exhaust Fluid (DEF) pressure build up failure 	 MIL illuminated Yellow electronic malfunction lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Empty DEF tank DEF filter clogged DEF inlet pipe leak or blockage DEF pump assembly
FMI 31	• Condition exists	 Aftertreatment Diesel Exhaust Fluid (DEF) pressure build up failure 	 MIL illuminated Yellow electronic malfunction lamp illuminated No Aftertreatment Diesel Exhaust Fluid (DEF) dosing 	 Empty DEF tank DEF filter clogged DEF inlet pipe leak or blockage DEF pump assembly

ECM SPN 5394, Aftertreatment Diesel Exhaust Fluid (DEF) Dosing Valve – MID 128 PSID 89

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 0	 Data valid but above normal operational range - Most severe level 	 Low side circuit shorted to + 	• MIL illuminated	 Aftertreatment DEF dosing pump assembly
FMI 1	 Data valid but below normal operational range - Most severe level 	 Short to ground Low side circuit open 	 MIL illuminated 	 Aftertreatment DEF dosing pump assembly
FMI 3	 Voltage above normal, or shorted to high source 	Circuit shorted +	• MIL illuminated	 Aftertreatment DEF dosing pump assembly
FMI 4	 Voltage below normal, or shorted to low source 	Circuit shorted –	 MIL illuminated 	 Aftertreatment DEF dosing pump assembly

FMI 5	 Current below normal or open circuit 	Open circuit	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Aftertreatment DEF doser Aftertreatment DEF dosing pump assembly
FMI 14	 Special instructions 	 Aftertreatment Diesel Exhaust Fluid (DEF) Doser clogged or hose clogged 	 MIL illuminated Yellow electronic malfunction lamp illuminated 	 Aftertreatment Diesel Exhaust Fluid (DEF) doser clogged Hose clogged

ECM SPN 5394, Aftertreatment Diesel Exhaust Fluid (DEF) Dosing Valve – MID 128 PSID 90

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 1	 Data valid but below normal operational range 	 Dosing failure Aftertreatment Diesel Exhaust Fluid (DEF) dosing amount too low or DEF quality 	 MIL illuminated NOx emissions too high 	 NOx sensor SCR catalyst malfunction EGR mass flow failure SCR inlet temperature sensor
FMI 17	 Data valid but below normal operating range - Least severe level 	 Dosing failure Aftertreatment Diesel Exhaust Fluid (DEF) dosing amount too low or DEF quality 	 MIL illuminated NOx emissions too high 	 NOx sensor SCR catalyst malfunction EGR mass flow failure SCR inlet temperature sensor

ECM SPN 5485, Aftertreatment Diesel Exhaust Fluid (DEF) Pump Orifice – MID 128 PSID 121

Type of fault:	FMI Description:	Fault Condition:	Possible Symptoms:	Possible Cause:
FMI 11	 Root cause not known 	 Aftertreatment Diesel Exhaust Fluid (DEF) bleed orifice clogged 	 MIL illuminated Yellow electronic malfunction lamp illuminated No Aftertreatment Diesel Exhaust 	 Bleed orifice Aftertreatment Diesel Exhaust Fluid (DEF) pressure sensor
			Fluid (DEF) dosing
