Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Datasensor S7-5-E-P Manual . To get started finding Datasensor S7-5-E-P Manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

Datasensor S7-5-E-P Manual

Please refer to the "SETTING" paragraph for setup procedure indications. STABILITY LED S The green stability LED on indicates that the received signal has a safety margin larger than 30% of the output switching value. DELAY LED T The green delay LED on indicates that the function is active. SPEED LED H The green speed LED on indicates that the sensor is functioning with the maximum switching frequency. SET PUSHBUTTON A long pressure on the pushbutton activates the selfsetting procedure. The REMOTE input allows the external SET control. It can be removed opening it completely and pulling it slightly, with a slight pression it can be replaced back. Mount the sensor on a DIN rail or using to fixing holes and screws M3x20 or longer. For mounting on DIN rail, insert first part A. Fixing holes Lock button DIN guide Fibres insertion holes Installation of the fibreoptics Press the lock pushbutton and keep it pressed until all the fibres has been completely inserted. Insert the fibres in the corresponding holes as described in the dimension drawing. The transparent CLEARLOCK™ fixing block allows to easily check that the fibres are correctly inserted. The insertion resistance is due to the Oring seal; please insert the fibres for about 6mm deeper until they touch the photoelements B. Consumption output current excluded 50 mA Outputs NPN S7xN or PNP S7xP Output current 100 mA max. Two different setting possibilities are available EASY TOUCH; a long pressure of the SET pushbutton allows selfsetting. FINE DETECTION; to be used only in particularly critical conditions. The sensor can function either in the DARK operating or in the LIGHT operating mode. Place the object to detect in front of the proximity fibres within the operating distance, or in the middle of the through beam fibres. When the LIGHT mode is selected the "LOn" is visualised; "dOn" to select the DARK mode.<http://h04ydivan.ru/userfiles/file/hp-2215-printer-manual.xml>

• datasensor s7-5-e-p manual, 1.0, datasensor s7-5-e-p manual.

If "dSOF" is selected the display will be turned off when back to the normal mode and turned on at each pressure. It will turn off again if not pressed for at least 5 sec. The "RESET" text blinks until the pushbutton is pressed. The sensor returns to function normally when the button is released. To deactivate the keyboard block the sensor has to be turned off and then turned on with the REMOTE wire not connected. Thus using proximity fibres, the output is closed and the output LED is ON when the object is detected. Using through beam fibres, the output is closed and the output LED is ON when the object does not interrupt the beam i.e. the object is not detected. EASY TOUCH standard detection Place the object to detect in front of the proximity fibres within the operating range, or in the middle of the through beam fibres. When the Fast speed is selected the H LED is on; the H LED is off if the low "NorM" speed is selected. WARRANTY DATASENSOR SpA warrants its products to be free from defects. DATASENSOR SpA will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date. This warranty does not cover damage or liability deriving from the improper application of DATASENSOR products. Thank you, for helping us keep this platform clean. The editors will have a look at it as soon as possible. Datasensor S75EP 950551030. Datasheet s7manual.pdf; COMPACT WITH DISPLAY FIBRE OPTIC AMPLIFIER. Datasensor S7. Please see our Privacy Policy for more information. Update your browser for more security, comfort and the best experience for this site. Try Findchips PRO. With its slim 10mm body width, the S7 represents the ideal solution for all applications requiring high accuracy sensing combined with very compact dimensions. The high resolution 12 bit amplifier has a response time of 50 s for a switching frequency of 10 Khz; 4096 resolution steps make the S7 series perfect for ultrahigh precision detection of small objects and low colour contrasts. This is made easier by the integral 4 digit display, which clearly indicates the received signal, selected time delay and the adjustable set point values. Moreover, the white light LED emission possibility enhances the contrast detection.

Installing and setting the S7 is easy and rapid, thanks to the patent covered CLEARLOCK fibre fixing and EASYtouch adjustment system that offers remote setting, keylock and activation of the output OFF delay function. Furthermore new versions of the S7 series are available with multiturn mechanical trimmer threshold adjustment for cost oriented applications. The CLEARLOCK™ fibre optic fixing system assists reliable insertion of standard and high performance 2.2mm fibre optics. The EASYtouch™ one touch setting procedure automatically selects the best detection conditions. For critical applications a two touch setting is provided for fine tuning. S7 benefits from remote teach, keypad lock and delay off timing functions. For further information on our extensive range accessories please see our OF and OFA fibre optic datasheet. DIMENSIONS INDICATORS AND SETTINGS ACCESSORIES For dedicated accessories refer to the ACCESSORIES section of this catalogue Refer also to Fibre Optics, Connectors and Fixing brackets of the General Catalogue 7 Teachin button for setting.
