Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

Purpose of the documentation

This manual supplements the system manual of the S7-1500 automation system/ET 200MP distributed I/O system as well as the function manuals. This manual contains a description of the module-specific information. The system-related functions are described in the system manual. All system-spanning functions are described in the function manuals.

The information provided in this equipment manual and the system manual enables you to commission the CPU .

Conventions

STEP 7: In this documentation, "STEP 7" is used as a synonym for all versions of the configuration and programming software "STEP 7 (TIA Portal)".

Please also observe notes marked as follows:

NOTE

A note contains important information on the product described in the documentation, on the handling of the product or on the section of the documentation to which particular attention should be paid.

Recycling and disposal

For environmentally friendly recycling and disposal of your old equipment, contact a certified electronic waste disposal company and dispose of the equipment according to the applicable regulations in your country.

Industry Mall

The Industry Mall is the catalog and order system of Siemens AG for automation and drive solutions on the basis of Totally Integrated Automation (TIA) and Totally Integrated Power (TIP).

You can find catalogs for all automation and drive products on the Internet

(<https://mall.industry.siemens.com>).

1.1 Guide documentation S7-1500/ET 200MP

1.1.1 Information classes S7-1500/ET 200MP

The documentation for the SIMATIC S7-1500 automation system and the ET 200MP distributed I/O system is arranged into three areas.

This arrangement enables you to access the specific content you require. Changes and supplements to the manuals are documented in a Product Information.

You can download the documentation free of charge from the Internet

(<https://support.industry.siemens.com/cs/ww/en/view/109742691>).

Basic information

The System Manual and Getting Started describe in detail the configuration, installation, wiring and commissioning of the SIMATIC S7-1500 and ET 200MP systems.

The STEP 7 online help supports you in the configuration and programming.

Examples:

- Getting Started S7-1500
- S7-1500/ET 200MP System Manual
- Online help TIA Portal

Device information

Equipment manuals contain a compact description of the module-specific information, such as properties, wiring diagrams, characteristics and technical specifications.

Examples:

- Equipment Manuals CPUs
- Equipment Manuals Interface Modules
- Equipment Manuals Digital Modules
- Equipment Manuals Analog Modules
- Equipment Manuals Communications Modules
- Equipment Manuals Technology Modules
- Equipment Manuals Power Supply Modules

General information

The function manuals contain detailed descriptions on general topics relating to the SIMATIC S7-1500 and ET 200MP systems.

Examples:

- Function Manual Diagnostics
- Function Manual Communication
- Function Manual Motion Control
- Function Manual Web Server
- Function Manual Cycle and Response Times
- PROFINET Function Manual
- PROFIBUS Function Manual

Product Information

Changes and supplements to the manuals are documented in a Product Information. The Product Information takes precedence over the device and system manuals.

You can find the latest Product Information on the S7-1500 and ET 200MP systems on the Internet (<https://support.industry.siemens.com/cs/de/en/view/68052815>).

Manual Collection S7-1500/ET 200MP

The Manual Collection contains the complete documentation on the SIMATIC S7-1500 automation system and the ET 200MP distributed I/O system gathered together in one file. You can find the Manual Collection on the Internet.

(<https://support.industry.siemens.com/cs/ww/en/view/86140384>)

SIMATIC S7-1500 comparison list for programming languages

The comparison list contains an overview of which instructions and functions you can use for which controller families.

You can find the comparison list on the Internet

(<https://support.industry.siemens.com/cs/ww/en/view/86630375>).

1.1.2 SIMATIC Technical Documentation

Additional SIMATIC documents will complete your information. You can find these documents and their use at the following links and QR codes.

The Industry Online Support gives you the option to get information on all topics. Application examples support you in solving your automation tasks.

Overview of the SIMATIC Technical Documentation

Here you will find an overview of the SIMATIC documentation available in Siemens Industry Online Support:

Industry Online Support International

(<https://support.industry.siemens.com/cs/ww/en/view/109742705>)

Watch this short video to find out where you can find the overview directly in Siemens Industry Online Support and how to use Siemens Industry Online Support on your mobile device:

Quick introduction to the technical documentation of automation products per video (<https://support.industry.siemens.com/cs/us/en/view/109780491>)

YouTube video: Siemens Automation Products - Technical Documentation at a Glance (<https://youtu.be/TwLSxxRQsA>)

mySupport

With "mySupport" you can get the most out of your Industry Online Support.

Registration	You must register once to use the full functionality of "mySupport". After registration, you can create filters, favorites and tabs in your personal workspace.
Support requests	Your data is already filled out in support requests, and you can get an overview of your current requests at any time.
Documentation	In the Documentation area you can build your personal library.
Favorites	You can use the "Add to mySupport favorites" to flag especially interesting or frequently needed content. Under "Favorites", you will find a list of your flagged entries.
Recently viewed articles	The most recently viewed pages in mySupport are available under "Recently viewed articles".
CAX data	The CAX data area gives you access to the latest product data for your CAX or CAE system. You configure your own download package with a few clicks: • Product images, 2D dimension drawings, 3D models, internal circuit diagrams, EPLAN macro files • Manuals, characteristics, operating manuals, certificates • Product master data

You can find "mySupport" on the Internet. (<https://support.industry.siemens.com/My/ww/en>)

Application examples

The application examples support you with various tools and examples for solving your automation tasks. Solutions are shown in interplay with multiple components in the system - separated from the focus on individual products.

You can find the application examples on the Internet.
(<https://support.industry.siemens.com/cs/ww/en/ps/ae>)

Safety instructions

2.1 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit (<https://www.siemens.com/industrialsecurity>).

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customers' exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed visit (<https://www.siemens.com/cert>).

Product overview

3.1 New functions

This section contains an overview of the most important new firmware functions of the CPU compared to the predecessor CPU (V2.9).

New functions of the CPU in firmware version V3.0

New functions	Applications	Customer benefits
Communication of the CPU		
Network Management Protocol SNMP	A simple configuration option is available for using the SNMP services. For new configurations, this is disabled by default in terms of "Security-by-Default".	Can be enabled/disabled in the CPU properties. Community strings can be configured.
OPC UA server – Reading the diagnostic status of the own address space	By using the OPC UA instruction for reading ("OPC_UA_ReadList"), the own namespace of the OPC UA Server can be accessed. This allows you to read out the following statuses and react to them in the user program: • Status of the own OPC UA server • Status of the connections of OPC UA clients • Status of the session • Status of subscriptions	This allows connection problems to be quickly detected, for example, and plant availability to be increased.
OPC UA server – Time stamping of the source time of nodes	By using the OPC UA instruction for writing ("OPC_UA_WriteList") it is possible to change the "SourceTimestamp" as well as the status code of an OPC UA variable (node).	Distinction between the "source" and "server" time possible
OPC UA server – Increase of the quantity structures	The following quantity structures have been increased: • Possible number of nodes in the server interface • Maximum possible number of subscriptions per session • For subscription, the recommendation for observed values was increased.	Further applications for CPUs as OPC UA servers
Web server of the CPU		
New Web API methods:	Many new API methods extend your access options to the CPU via the Web API.	Additional applications for the web server
Dynamic management of certificates	The web server certificate for HTTPS communication can now also be managed via the OPC UA GDS mechanism, without separate download of the hardware configuration.	Flexible certificate management

3.2 Application

New functions	Applications	Customer benefits
Allow data access only via Web API	They limit the functionality of the web server to the web API based functions. This means that only encrypted communication via HTTPS is possible.	Higher security of communication via web server
Technology functions of the CPU		
Axis functions	Save absolute encoder adjustment for device replacement	Saving the adjustment values with the "MC_SaveAbsoluteEncoderData" instruction saves having to perform the absolute encoder adjustment again after a device replacement.
	The "MC_Home" instruction supports the new "Incremental encoder adjustment" homing mode.	Extended scope of functions
	Active homing of absolute encoders is possible.	Extended scope of functions
	The "MC_Power" instruction supports coasting-down.	Extended scope of functions "MC_Power" instruction
	The hardware limit switches are configurable as traversable/non-traversable.	Extended scope of functions
	For axes in a synchronous system, the dynamic filter enables dynamic adaptation of axes with higher dynamic responses to the axis with the lowest dynamic response.	With the dynamic filter, axes with different inertia can be adjusted to each other. Optimization of a synchronous system
	Stop superimposed movements on the axis with the instruction "MC_HaltSuperimposed"	Use the instruction to stop a superimposed motion independently of the basic motion.
Trace functionality of the CPU	The S7-1500 CPU supports up to 64 configured signals per trace.	Number of configurable signals per trace
	Long-term trace: The S7-1500 CPU supports the cycle-granular recording of up to 64 different tags in a .csv file for a long time (hours, days, etc.)	Better diagnostic possibilities when analyzing the course of signals over a long period of time

Reference

You can find an overview of all new functions, improvements and revisions in the respective firmware versions on the Internet

(<https://support.industry.siemens.com/cs/ww/en/view/109478459>).

3.2 Application

SIMATIC S7-1500 is the modular control system for a wide variety of automation applications in discrete automation.

SIMATIC S7-1500 is the cost-effective and convenient solution for a broad range of tasks and offers the following advantages:

- Modular, fanless design
- Simple realization of distributed structures
- User-friendly handling

Areas of application of the SIMATIC S7-1500 automation system include, for example:

- Special-purpose machines
- Textile machinery
- Packaging machines
- General mechanical engineering
- Controller engineering
- Machine tool engineering
- Installation engineering
- Electrical industry and crafts
- Automobile engineering
- Water/waste water
- Food & Beverage

Areas of application of the SIMATIC S7-1500R/H redundant system include, for example:

- Tunnels
- Airports (e.g. baggage conveyors)
- Subways
- Shipbuilding
- Wastewater treatment plants
- High-bay warehouses

Areas of application of the SIMATIC S7-1500T automation system for advanced motion control applications include, for example:

- Packaging machines
- Converting applications
- Assembly automation
- Pick-and-place automation
- Palletizers

Several CPUs with various levels of performance and a comprehensive range of modules with many convenient features are available. Fail-safe CPUs enable use in fail-safe applications. The modular design allows you to use only the modules that you need for your application. The controller can be retrofitted with additional modules at any time to expand its range of tasks.

High industrial suitability due to the high resistance to EMC, shock and vibration enable universal use of the SIMATIC S7-1500, S7-1500R/H and S7-1500T automation systems.

Performance segments of standard CPUs

The CPUs can be used for smaller and mid-range applications, as well as for the high-end range of machine and plant automation.

Table 3-1 Standard CPUs

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1511-1 - PN	Standard CPU for small to mid-range applications	--	1	--	--	1.8 MB	25 ns
CPU 1513-1 - PN	Standard CPU for mid-range applications	--	1	--	--	3.1 MB	25 ns
CPU 1515-2 - PN	Standard CPU for mid-range to large applications	--	1	1	--	5.5 MB	6 ns
CPU 1516-3 - PN/DP	Standard CPU for demanding applications and communication tasks	1	1	1	--	9.5 MB	6 ns
CPU 1517-3 - PN/DP	Standard CPU for demanding applications and communication tasks	1	1	1	--	10 MB	2 ns
CPU 1518-4 - PN/DP	Standard CPU for high-performance applications, demanding communication tasks and very short reaction times	1	1	1	1	66 MB	1 ns
CPU 1518-4 - PN/DP MFP	Standard CPU for high-performance applications, demanding communication tasks, very short reaction times and C/C++ blocks for the user program	1	1	1	1	116* MB	1 ns

* 50 MB of the integrated work memory is reserved for the function library of CPU runtime

Performance segments of redundant CPUs

The CPUs of the S7-1500R/H redundant system offer a high degree of reliability and system availability. A redundant configuration of the most important automation components reduces the likelihood of production downtimes and the consequences of component errors.

The higher the risks and costs of a production downtime, the more worthwhile the use of a redundant system. The avoidance of production downtimes compensates for the generally higher investment costs.

Table 3-2 Redundant CPUs

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1513R-1 PN	Redundant CPU for smaller to mid-range applications	--	1	--	--	3.1 MB	50 ns
CPU 1515R-2 PN	Redundant CPU for mid-range to large applications	--	1	--	1	5.5 MB	20 ns
CPU 1517H-3 PN	Redundant CPU for demanding applications and communication tasks	--	1	--	1	10 MB	4 ns
CPU 1518HF-4 PN	Fail-safe and redundant CPU for demanding applications and communication tasks	--	1	--	2	69 MB	4 ns

Performance segments of compact CPUs

The compact CPUs can be used for smaller to mid-range applications and have an integrated analog and digital on-board I/O as well as integrated technology functions.

Table 3-3 Compact CPUs

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1511C-1 PN	Compact CPU for small to mid-range applications	--	1	--	--	1.175 MB	60 ns
CPU 1512C-1 PN	Compact CPU for mid-range applications	--	1	--	--	1.25 MB	48 ns

The following table shows the specific properties of the Compact CPUs.

	CPU 1511C-1 PN	CPU 1512C-1 PN
Integrated analog inputs/outputs	5 inputs/2 outputs	5 inputs/2 outputs
Integrated digital inputs/outputs	16 inputs/16 outputs	32 inputs/32 outputs
High-speed counters	6	6
Frequency meters	6 (max. 100 kHz)	6 (max. 100 kHz)
Period duration measurement	6 channels	6 channels
Pulse width modulation (PWM output)	Max. 4 (up to 100 kHz)	Max. 4 (up to 100 kHz)
Pulse Train Output (PTO output)	Max. 4 (up to 100 kHz)	Max. 4 (up to 100 kHz)
Frequency output	Up to 100 kHz	Up to 100 kHz

Performance segments of technology CPUs

The technology CPUs can be used for low and mid-range applications, as well as for the high-end range of machine and plant automation. Because of their extended motion control functions, they are primarily used for drive control.

Table 3-4 Technology CPUs

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1511T-1 PN	Technology CPU for small to mid-range applications	--	1	--	--	1.95 MB	25 ns
CPU 1515T-2 PN	Technology CPU for mid-range to large applications	--	1	1	--	6 MB	6 ns
CPU 1516T-3 PN/DP	Technology CPU for high-end applications and communication tasks	1	1	1	--	10.5 MB	6 ns
CPU 1517T-3 PN/DP	Technology CPU for high-end applications and communication tasks	1	1	1	--	11 MB	2 ns
CPU 1518T-4 PN/DP	Technology CPU for high-performance motion control applications with large quantities, demanding communication tasks and very short reaction times	1	1	1	1	69 MB	1 ns
CPU 1511TF-1 PN CPU 1515TF-2 PN CPU 1516TF-3 P-N/DP CPU 1517TF-3 P-N/DP CPU 1518TF-4 PN/DP	These CPUs are described in the fail-safe CPUs.						

Performance segments of fail-safe CPUs

The fail-safe CPUs are intended for users who want to implement demanding standard and fail-safe applications both centrally and decentrally.

These fail-safe CPUs allow the processing of standard and safety programs on a single CPU. This allows fail-safe data to be evaluated in the standard user program. The integration also provides the system advantages and the extensive functionality of SIMATIC for fail-safe applications.

The fail-safe CPUs are certified for use in safety mode up to:

- Safety class (Safety Integrity Level) SIL 3 according to IEC 61508:2010
- Performance Level (PL) e and Category 4 according to ISO 13849-1:2015 or EN ISO 13849-1:2015

Additional password protection for F-configuration and F-program is set up for IT security.

Table 3-5 Fail-safe CPUs

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1511F-1 PN	Fail-safe CPU for small to mid-range applications	--	1	--	--	1.95 MB	25 ns
CPU 1511TF-1 PN	Fail-safe technology CPU for small to mid-range applications	--	1	--	--	1.95 MB	25 ns
CPU 1513F-1 PN	Fail-safe CPU for mid-range applications	--	1	--	--	3.4 MB	25 ns
CPU 1515F-2 PN	Fail-safe CPU for mid-range to large applications	--	1	1	--	6 MB	6 ns
CPU 1515TF-2 PN	Fail-safe technology CPU for high-end applications and communication tasks	--	1	1	--	6 MB	6 ns
CPU 1516F-3 PN/DP	Fail-safe CPU for demanding applications and communication tasks	1	1	1	--	10.5 MB	6 ns
CPU 1516TF-3 PN/DP	Fail-safe technology CPU for high-end applications and communication tasks	1	1	1	--	10.5 MB	6 ns
CPU 1517F-3 PN/DP	Fail-safe CPU for demanding applications and communication tasks	1	1	1	--	11 MB	2 ns
CPU 1517TF-3 PN/DP	Fail-safe technology CPU for high-end applications and communication tasks	1	1	1	--	11 MB	2 ns
CPU 1518F-4 PN/DP	Fail-safe CPU for high-performance applications, demanding communication tasks and very short reaction times	1	1	1	1	69 MB	1 ns
CPU 1518F-4 PN/DP MFP	Fail-safe CPU for high-performance applications, demanding communication tasks, very short reaction times and C/C++ blocks for the user program	1	1	1	1	119* MB	1 ns

* 50 MB of the integrated work memory is reserved for the function library of CPU runtime

3.2 Application

CPU	Performance segment	PROFIBUS interfaces	PROFINET IO RT/IRT interfaces	PROFINET IO RT interface	Basic PROFINET functionality	Work memory	Processing time for bit operations
CPU 1518TF-4 P-N/DP	Technology CPU for high-performance motion control applications with large quantities, demanding communication tasks and very short reaction times	1	1	1	1	69 MB	1 ns

* 50 MB of the integrated work memory is reserved for the function library of CPU runtime

In addition to the CPUs, further components such as SINAMICS drives dispose of integrated safety functions. Additional information about integrated safety functions in drives can be found in the manuals for the respective products.

Security Integrated

In conjunction with STEP 7, each CPU offers password-based know-how protection against unauthorized reading out or modification of the program blocks.

Copy protection provides reliable protection against unauthorized reproduction of program blocks. With copy protection, individual blocks on the SIMATIC memory card can be tied to its serial number so that the block can only be run if the configured memory card is inserted into the CPU.

In addition, various access rights can be assigned in the controller to different user groups using four different authorization levels.

Improved manipulation protection allows changed or unauthorized transfers of engineering data to be detected by the controller.

The use of an Ethernet CP (CP 1543-1) provides you with additional access protection through a firewall or possibilities to establish secure VPN connections.

Design and handling

All CPUs of the SIMATIC S7-1500 product series feature a display with plain text information. The display provides the user with information on the order numbers, firmware version, and serial number of all connected modules. In addition, the IP address of the CPU and other network settings can be adapted locally without a programming device. Error messages are shown on the display directly in plain text. When performing servicing, you can minimize plant downtimes by quickly accessing the diagnostics alarms. Detailed information about this and a multitude of other display functions is available in the SIMATIC S7-1500 Display Simulator (<https://support.industry.siemens.com/cs/ww/en/view/109761758>).

Uniform front connectors for all modules and integrated potential jumpers for flexible formation of potential groups simplify storage. Additional components such as circuit breakers, relays, etc., can be installed quickly and easily, since a DIN rail is implemented in the rail of the SIMATIC S7-1500. The CPUs of the SIMATIC S7-1500 product series can be expanded centrally and in a modular fashion with signal modules. Space-saving expansion enables flexible adaptation to each application.

The system cabling for digital signal modules enables fast and clear connection to sensors and actuators from the field (fully modular connection consisting of front connector modules,

connection cables and I/O modules), as well as easy wiring inside the control cabinet (flexible connection consisting of front connectors with assembled single conductors).

System diagnostics and alarms

Integrated system diagnostics is activated by default for the CPUs. The different types of diagnostics are configured instead of programmed. System diagnostics information and alarms from the drives are displayed consistently and in plain text:

- On the CPU display
- In STEP 7
- On the HMI
- On the Web server

This information is available in RUN mode, but also in STOP mode of the CPU. The diagnostic information is updated automatically when you configure new hardware components.

The CPU is available as a central interrupt server in up to three project languages. The HMI takes over the display in the project languages defined for the CPU. If you require alarm texts in additional languages, you can load them into your HMI via the configured connection. The CPU, STEP 7 and their HMI ensure data consistency without additional engineering steps. The maintenance work is easier.

3.3 Hardware properties

Article number

6ES7511-1AL03-0AB0

View of the module

The following figure shows a CPU 1511-1 PN.

Figure 3-1 CPU 1511-1 PN

NOTE

Protective film

Note that a protective film is attached to the display of the CPU when shipped from the factory. Remove the protective film if necessary.

Properties

CPU 1511-1 PN has the following technical properties:

Property	Description	Additional information
CPU display	All CPUs of the SIMATIC S7-1500 product series feature a display with plain text information. The display provides information on order numbers, firmware version and serial numbers of all connected modules. In addition, you can set the IP address of the CPU and carry out further network settings. The display shows occurring error messages directly in plain text. In addition to the functions listed here, a multitude of other functions that are described in the SIMATIC S7-1500 Display Simulator are shown on the display.	- S7-1500, ET 200MP system manual (http://support.automation.siemens.com/WW/view/en/59191792) - SIMATIC S7-1500 Display Simulator or (https://support.industry.siemens.com/cs/ww/en/view/109761758)

Property	Description	Additional information
Supply voltage	The 24 V DC supply voltage is fed in via a 4-pin plug located at the bottom of the CPU.	- Chapter Connecting up (Page 30) - S7-1500, ET 200MP system manual (http://support.automation.siemens.com/WW/view/en/59191792)
PROFINET IO		
PROFINET interface (X1 P1R and X1 P2R)	The interface has two ports. In addition to basic PROFINET functionality, it also supports PROFINET IO RT (real time) and IRT (isochronous real time).	PROFINET function manual (https://support.industry.siemens.com/cs/ww/en/view/49948856)
Operation of the CPU as - IO controller - I-device	IO controller: As an IO controller the CPU addresses the connected IO devices I-device: As an I-device (intelligent IO device) the CPU is assigned to a higher-level IO controller and is used in the process as an intelligent pre-processing unit of sub-processes	

Accessories

You can find information on "Accessories/spare parts" in the S7-1500, ET 200MP system manual (<http://support.automation.siemens.com/WW/view/en/59191792>).

3.4 Firmware functions

Functions

The CPU 1511-1 PN supports the following firmware functions:

Function	Description	Additional information
Integrated system diagnostics	The system automatically generates the messages for the system diagnostics and outputs these messages via a programming device/PC, HMI device, the Web server or the integrated display. System diagnostics information is also available when the CPU is in STOP mode.	Diagnostics function manual (https://support.industry.siemens.com/cs/ww/en/view/59192926)
Integrated Web server	The Web server lets you access the CPU data by means of a network. Evaluations, diagnostics, and modifications are thus possible over long distances. Monitoring and evaluation is possible without STEP 7; all you need is a Web browser. Make sure that you take appropriate measures (e.g. limiting network access, using firewalls) to protect the CPU from being compromised.	- Web server function manual (https://support.industry.siemens.com/cs/ww/en/view/59193560) - Security with SIMATIC S7 controllers system manual (https://support.industry.siemens.com/cs/ww/en/view/90885010)

3.4 Firmware functions

Function	Description	Additional information
Integrated trace functionality	Trace functionality supports you in troubleshooting and/or optimizing the user program. You record device tags and evaluate the recordings with the trace and logic analyzer function. Tags are, for example, drive parameters or system and user tags of a CPU. The device saves the recordings. You can read out and permanently save the recordings with the configuration system (ES), if required. The trace and logic analyzer function is therefore suitable for monitoring highly dynamic processes. The trace record can also be displayed through the Web server.	Function manual for trace and logic analyzer function (https://support.industry.siemens.com/cs/ww/en/view/64897128)
OPC UA	With OPC UA, you can exchange data via an open and manufacturer-neutral communication protocol. The CPU can act as OPC UA server. The CPU as OPC UA server can communicate with OPC UA clients. In turn, as an OPC UA client, the CPU can access an OPC UA server, allow the OPC UA server to run methods and read out information from the OPC UA server. The OPC UA Companion Specification allows methods to be specified uniformly and independently of the manufacturer. Using these specified methods, you can easily integrate devices from various manufacturers into your plants and production processes.	Communication function manual (https://support.industry.siemens.com/cs/ww/en/view/59192925)
Configuration control	You can use configuration control to operate different real hardware configurations with a configured maximum configuration of the S7-1500 automation system/ET 200MP distributed I/O system. This means that, in series machine manufacturing in particular, you have the option of operating/configuring different configuration variants of a machine with a single project.	S7-1500, ET 200MP system manual (https://support.industry.siemens.com/cs/ww/en/view/59191792)
PROFINET IO		
RT (real time)	RT prioritizes PROFINET IO telegrams over standard telegrams. This ensures the required determinism in the automation technology. In this process the data is transferred via prioritized Ethernet telegrams.	PROFINET function manual (https://support.industry.siemens.com/cs/ww/en/view/49948856)
IRT (isochronous real time)	A reserved bandwidth within the send clock is available for IRT data. The reserved bandwidth ensures that the IRT data can be transmitted in time-synchronized intervals, unaffected by other high network loading (e.g. TCP/IP communication or additional real-time communication). Update times with maximum determinism can be realized through IRT. Isochronous applications are possible with IRT.	
Isochronous mode	The Isochronous mode system property acquires measured values and process data and processes the signals in a fixed system clock. Isochronous mode thus contributes to high control quality and hence to greater manufacturing precision. Isochronous mode reduces possible fluctuations of the process reaction times to a minimum. Time-assured processing makes higher machine cycles possible.	

Function	Description	Additional information
MRP (Media Redundancy Protocol)	It is possible to establish redundant networks via the Media Redundancy Protocol. Redundant transmission links (ring topology) ensure that an alternative communication path is made available if a transmission link fails. The PROFINET devices that are part of this redundant network form an MRP domain. RT operation is possible with the use of MRP.	PROFINET function manual (https://support.industry.siemens.com/cs/ww/en/view/49948856)
MRPD (Media Redundancy with Planned Duplication)	The advantage of the MRP extension MRPD is that, in the event of a failure of a device or a line in the ring, all other devices continue to be supplied with IO data without interruption and with short update times. MRPD is based on IRT and MRP. To realize media redundancy with short update times, the PROFINET devices participating in the ring send their data in both directions. The devices receive this data at both ring ports so that there is no reconfiguration time.	
Shared device	The "Shared device" function allows you to divide the modules or submodules of an IO device up among different IO controllers. Numerous IO controllers are often used in larger or widely distributed systems. Without the "Shared device" function, each I/O module of an IO device is assigned to the same IO controller. If sensors that are physically close to each other must provide data to different IO controllers, several IO devices are required. The "Shared device" function allows the modules or submodules of an IO device to be divided up among different IO controllers, thus allowing flexible automation concepts. You can, for example, combine I/O modules that are physically close to each other in one IO device.	
PROFenergy	PROFenergy is a PROFINET-based data interface for switching off consumers centrally and with full coordination during pause times regardless of the manufacturer or device type. The goal is that the process is only provided with the energy that is absolutely required. The majority of the energy is saved by the process; the PROFINET device itself only contributes a few watts of savings potential.	
Integrated technology		
Motion Control	S7-1500 CPUs support the controlled positioning and traveling of axes via S7-1500 Motion Control functions by means of the following technology objects: Speed-controlled axes, positioning axes, synchronized axes, external encoders, cams, cam tracks and measuring inputs. • Speed-controlled axis for controlling a drive with speed specification • Positioning axis for position-controlled positioning of a drive • Synchronous axis to interconnect with a master value. The axis is synchronized to the master axis position.	S7-1500T Motion Control function manuals (https://support.industry.siemens.com/cs/ww/en/view/109751049)

3.4 Firmware functions

Function	Description	Additional information
	- External encoder for detecting the actual position of an encoder and its use as a master value for synchronous operation - Cams, cam track for position-dependent generation of switching signals - Measuring input for fast, accurate and event-dependent sensing of actual positions	
Integrated closed-loop control functionality	- PID Compact (continuous PID controller) - PID 3Step (step controller for integrating actuators) - PID Temp (temperature controller for heating and cooling with two separate actuators)	PID control function manual (https://support.industry.siemens.com/cs/ww/en/view/108210036)
Integrated safety		
Know-how protection	The know-how protection protects user blocks against unauthorized access and modifications.	S7-1500, ET 200MP system manual (https://support.industry.siemens.com/cs/ww/en/view/59191792)
Copy protection	Copy protection links user blocks to the serial number of the SIMATIC memory card or to the serial number of the CPU. User programs cannot run without the corresponding SIMATIC memory card or CPU.	
Access protection	You can use authorization levels to assign separate rights to different users.	
Integrity protection	The CPUs feature an integrity protection function by default. This helps to detect any manipulation of the engineering data on the SIMATIC Memory Card or during data transfer between the TIA Portal and the CPU, and to check communication from a SIMATIC HMI system to the CPU for possible manipulation of engineering data. The user receives a corresponding message about manipulation of engineering data detected by the integrity protection.	
Password provider	As an alternative to manual password input you can connect a password provider to STEP 7. A password provider offers the following advantages: - Convenient handling of passwords. STEP 7 reads the password automatically for the blocks. This saves you time. - Optimum block protection because the users do not know the password itself.	

3.5 Operating and display elements

3.5.1 Front view of the CPU with closed front panel

The following figure shows the front view of the CPU 1511-1 PN.

- ① LEDs for the current operating mode and diagnostics status of the CPU
- ② Display
- ③ Operator control buttons

Figure 3-2 View of the CPU 1511-1 PN (with front panel) - front

NOTE

Temperature range for display

To increase its service life, the display switches off at a temperature below the permitted operating temperature of the device. When the display cools down, it automatically switches itself on again. When the display is switched off, the LEDs continue to show the status of the CPU.

For more information on the temperatures at which the display switches itself on and off, refer to the Technical specifications [\(Page 38\)](#).

Removing and fitting the front panel or display

You can remove and fit the front panel or the display during operation.

WARNING

Personal injury and damage to property may occur

If you pull or plug the front panel of an S7-1500 automation system during operation, personal injury or damage to property can occur in zone 2 hazardous areas.

Before you remove or fit the front panel, always switch off the power supply to the S7-1500 automation system in hazardous area zone 2.

Locking the front panel

You can lock the front panel to protect your CPU against unauthorized access.

You can attach a security seal or a padlock with a diameter of 3 mm to the front panel.

Figure 3-3 Locking latch on the CPU

In addition to the mechanical lock, you can also block access to a password-protected CPU on the display (local lock) and assign a password for the display. You can find additional information on the display, configurable protection levels and local locks in the S7-1500, ET 200MP (<http://support.automation.siemens.com/WW/view/en/59191792>) system manual.

Reference

You will find detailed information on the individual display options, a training course and a simulation of the available menu commands in the SIMATIC S7-1500 Display Simulator (<https://support.industry.siemens.com/cs/ww/en/view/109761758>).

3.5.2 Front view of the CPU without front panel and view from below

The following figure shows the operator controls and connection elements of the CPU 1511-1 PN.

- ① LEDs for the current operating mode and diagnostic status of the CPU
- ② Display
- ③ MAC address
- ④ LED displays for the 2 ports of the PROFINET interface X1
- ⑤ Operating modes with "STOP ACTIVE" LED
- ⑥ Connector for power supply

Figure 3-4 View of the CPU 1511-1 PN (without front panel) – front

NOTE

Removing the display

Only remove the display if it is faulty.

You can find information on removing and replacing displays in the S7-1500, ET 200MP system manual (<https://support.industry.siemens.com/cs/ww/en/view/59191792>).

- ① Slot for the SIMATIC memory card
- ② PROFINET IO interface (X1) with 2 ports
- ③ Connection for supply voltage
- ④ Fixing screw

Figure 3-5 View of the CPU 1511-1 PN – bottom

3.5.3 Rear view of the CPU

The following figure shows the connection elements on the back of the CPU 1511-1 PN.

- ① Shield contact surface
- ② Plug-in connection for power supply
- ③ Plug-in connection for backplane bus
- ④ Fastening screw

Figure 3-6 View of the CPU 1511-1 PN - rear

3.6 Operating mode buttons

You use the operating mode buttons to set the operating mode of the CPU.
The following table shows the meaning of the corresponding operation of the operating mode buttons.

Table 3-6 Meaning of the operating mode buttons

Operation of the operating mode buttons	Meaning	Explanation
RUN	RUN mode	The CPU is executing the user program.
STOP	STOP mode	The user program is not being executed. (STOP ACTIVE LED lights up).
MRES 1. Press the operating mode button STOP. Result: The RUN/STOP LED lights up yellow. 2. Press the operating mode button STOP until the RUN/STOP LED lights up for the 2nd time and remains continuously lit (this takes three seconds). After this, release the button. 3. Press the operating mode button STOP again within the next three seconds.	Manual memory reset (with inserted SIMATIC memory card) or Reset to factory settings (without inserted SIMATIC memory card):	The CPU executes memory reset. or The CPU is reset to its factory settings. You can find additional information in the S7-1500/ET 200MP system manual. https://support.industry.siemens.com/cs/ww/en/view/59191792

Connecting up

This section provides information on the pin assignment of the individual interfaces and the block diagram of the CPU.

24 V DC supply voltage (X80)

The connector for the power supply is plugged in when the CPU ships from the factory. The following table shows the signal names and the descriptions of the pin assignment of the 24 V DC supply voltage.

Table 4-1 Pin assignment 24 V DC supply voltage

View	Signal name ¹⁾		Description
Connector			
 Figure	1	1L+	+ 24 V DC of the supply voltage
	2	1M	Ground of the supply voltage
	3	2M	Ground of the supply voltage for loop-through ²⁾
	4	2L+	+ 24 V DC of the supply voltage for loop-through ²⁾

¹⁾ 1L+ and 2L+ as well as 1M and 2M are bridged internally

²⁾ Maximum 10 A permitted

If the CPU is supplied by a system power supply, it is not necessary to connect the 24 V supply.

PROFINET interface X1 with 2-port switch (X1 P1R and X1 P2R)

The assignment corresponds to the Ethernet standard for an RJ45 plug.

- When autonegotiation is deactivated, the RJ45 socket is allocated as a switch (MDI-X).
- When autonegotiation is activated, autocrossing is in effect and the RJ45 socket is allocated either as data terminal equipment (MDI) or a switch (MDI-X).

Figure 4-1 PROFINET ports

NOTE

You need a screwdriver (max. blade width 2.5 mm) to remove the PROFINET plug.

Remove display

You can find a description of how to remove and replace the display in the S7-1500, ET 200MP (<http://support.automation.siemens.com/WW/view/en/59191792>) system manual.

Reference

You can find additional information on the topics of "Connecting the CPU" and "Accessories/spare parts" in the S7-1500, ET 200MP (<http://support.automation.siemens.com/WW/view/en/59191792>) system manual.

Assignment of the MAC addresses

The CPU has a PROFINET interface with two ports. The PROFINET interface itself has a MAC address, and each of the two PROFINET ports has its own MAC address. The CPU therefore has three MAC addresses in total.

The MAC addresses of the PROFINET ports are needed for the LLDP protocol, for example for the neighborhood discovery function.

The number range of the MAC addresses is sequential. The first and last MAC addresses are lasered on the nameplate on the right side of each CPU.

The table below shows how the MAC addresses are assigned.

Table 4-2 Assignment of the MAC addresses

	Assignment	Labeling
MAC address 1	PROFINET interface X1 (visible in STEP 7 in accessible devices)	• Front, lasered • Right side, lasered (start of number range)
MAC address 2	Port X1 P1R (required for LLDP, for example)	• Front and right side, not lasered
MAC address 3	Port X1 P2R (required for LLDP, for example)	• Front, not lasered • Right side, lasered (end of number range)

Block diagram

The following figure shows the block diagram of the CPU 1511-1 PN.

- | | | | |
|---|---|-------------|--------------------------|
| ① | CPU with control and operating mode buttons | X80 24 V DC | Infeed of supply voltage |
| ② | Electronics | L+ | 24 V DC supply voltage |
| ③ | PROFINET 2-port switch | M | Ground |

④	Backplane bus interface	SF	STOP ACTIVE LED (yellow)
⑤	Internal supply voltage	R/S	RUN/STOP LED (green/yellow)
X50	SIMATIC memory card	ER	ERROR LED (red)
PN X1 P1R	PROFINET interface X1 Port 1	MT	MAINT LED (yellow)
PN X1 P2R	PROFINET interface X1 Port 2	X1 P1, X1 P2	LED Link TX/RX

Figure 4-2 Block diagram of the CPU 1511-1 PN

Interrupts, error messages, diagnostics and system alarms

5

The status and error displays of the CPU 1511-1 PN are described below.

You will find additional information on "Interrupts" in the STEP 7 online help.

You can find additional information on the topics of "Diagnostics" and "System alarms" in the Diagnostics (<http://support.automation.siemens.com/WW/view/en/59192926>) function manual.

5.1 Status and error display of the CPU

LED display

The figure below shows the LED display of the CPU.

- ① RUN/STOP LED (yellow/green LED)
- ② ERROR LED (red LED)
- ③ MAINT LED (yellow LED)
- ④ LINK RX/TX LED for port X1 P1 (yellow/green LED)
- ⑤ LINK RX/TX LED for port X1 P2 (yellow/green LED)
- ⑥ STOP ACTIVE-LED (yellow LED)

Figure 5-1 LED display of the CPU (without front panel)

Meaning of the RUN/STOP, ERROR and MAINT LEDs

The CPU has three LEDs for displaying the current operating mode and diagnostics status. The following table shows the meaning of the various combinations of colors for the RUN/STOP, ERROR and MAINT LEDs.

Table 5-1 Meaning of the LEDs

RUN/STOP LED	ERROR LED	MAINT LED	Meaning
 LED off	 LED off	 LED off	Missing or insufficient power supply on the CPU.
 LED off	 LED flashes red	 LED off	An error has occurred.
 LED lit green	 LED off	 LED off	CPU is in RUN mode.
 LED lit green	 LED off	 LED lit yellow	Maintenance demanded for the plant. The affected hardware must be checked/replaced within a short period of time.
			Active Force job
			OPC UA server of the CPU expects initial trust lists and CRLs via GDS Push function.
 LED lit green	 LED off	 LED flashes yellow	Bad configuration
 LED lit yellow	 LED flashes red	 LED off	A diagnostics event is pending.
 LED lit yellow	 LED off	 LED flashes yellow	Firmware update using SIMATIC memory card successfully completed.
 LED lit yellow	 LED off	 LED off	CPU is in STOP mode.
			CPU runs a program with active breakpoints. The program is at a breakpoint.
 LED lit yellow	 LED flashes red	 LED flashes yellow	The program on the SIMATIC memory card is causing an error.
			Firmware update using SIMATIC memory card has failed.
			The CPU has detected an error state. Additional information is available via the CPU diagnostic buffer.
 LED flashes yellow	 LED off	 LED off	CPU is performing internal activities during STOP, e.g. startup after STOP.
			Download of the user program from the SIMATIC memory card
			CPU carries out a program with active breakpoint. The program is presently moving from one breakpoint to another.
			Firmware update is being performed.
 LED flashes yellow/green	 LED off	 LED off	Startup (transition from STOP → RUN)

5.1 Status and error display of the CPU

RUN/STOP LED	ERROR LED	MAINT LED	Meaning
 LED flashes yellow/green	 LED flashes red	 LED flashes yellow	Startup (CPU booting)
			Test of LEDs during startup, inserting a module.
			LED flashing test

Meaning of LINK RX/TX LED

Each port has a LINK RX/TX LED. The table below shows the various "LED scenarios" of the CPU ports.

Table 5-2 Meaning of the LEDs

LINK TX/RX LED	Meaning
 LED off	There is no Ethernet connection between the PROFINET interface of the PROFINET device and the communication partner. No data is currently being sent/received via the PROFINET interface. There is no LINK connection.
 LED flashes green	The "LED flashing test" is being performed.
 LED lit green	There is an Ethernet connection between the PROFINET interface of your PROFINET device and a communication partner.
 LED flashes yellow/green	Data is currently being received from or sent to a communications partner on Ethernet via the PROFINET interface of the PROFINET device.

NOTE

"LED" instruction

You can read the status (e.g. "On" or "Off") of LEDs of a CPU or a module using the "LED" instruction. Note, however, that it is not possible to read the LED status of the LINK RX/TX LEDs on all S7-1500 CPUs.

You can find additional information on the "LED" instruction in the STEP 7 online help.

Meaning of the STOP ACTIVE LED

The following table shows the meaning of the STOP ACTIVE LED of the CPU.

Table 5-3 Meaning of the LEDs

STOP ACTIVE LED	Meaning
 LED lit yellow	The CPU is switched to "STOP" mode using the STOP button. - As long as the STOP ACTIVE LED is lit up, switching the CPU to RUN mode is only possible using the RUN button. - The CPU can then no longer be set to RUN mode via the display operation or via online functions. The state of the buttons is retained at power-off. If the CPU does not start up automatically after a power-on, you have to keep the STOP button pressed during start-up until the STOP ACTIVE LED is activated. - If an automatic start-up is to be reliably prevented after a power-up, the STOP button has to be kept pressed during the start-up of the CPU until the STOP ACTIVE LED is activated.

STOP ACTIVE LED	Meaning
□ LED off	• The CPU is set to "STOP" mode using the display or programming device and not with the STOP button on the device. • The CPU is in RUN mode.

Technical specifications

The following table shows the technical specifications as of 11/2022. You will find a data sheet including daily updated technical specifications on the Internet (<https://support.industry.siemens.com/cs/ww/en/pv/6ES7511-1AL03-0AB0/td?dl=en>).

Article number	6ES7511-1AL03-0AB0
General information	
Product type designation	CPU 1511-1 PN
HW functional status	FS01
Firmware version	V3.0
Product function	
I&M data	Yes; I&M0 to I&M3
Isochronous mode	Yes; Distributed and central; with minimum OB 6x cycle of 500 µs (distributed) and 1 ms (central)
Engineering with	
STEP 7 TIA Portal configurable/integrated from version	V18 (FW V3.0); with older TIA Portal versions configurable as 6ES7511-1AK02-0AB0
Configuration control	
via dataset	Yes
Display	
Screen diagonal [cm]	3.45 cm
Control elements	
Number of keys	8
Mode buttons	2
Supply voltage	
Rated value (DC)	24 V
permissible range, lower limit (DC)	19.2 V
permissible range, upper limit (DC)	28.8 V
Reverse polarity protection	Yes
Mains buffering	
Mains/voltage failure stored energy time	5 ms
Repeat rate, min.	1/s
Input current	
Current consumption (rated value)	0.73 A
Current consumption, max.	0.9 A
Inrush current, max.	1.15 A; Rated value
I ² t	0.5 A ² ·s
Power	
Infeed power to the backplane bus	10 W

Article number	6ES7511-1AL03-0AB0
Power consumption from the backplane bus (balanced)	5.5 W
Power loss	
Power loss, typ.	7.5 W
Memory	
Number of slots for SIMATIC memory card	1
SIMATIC memory card required	Yes
Work memory	
• integrated (for program)	300 kbyte
• integrated (for data)	1.5 Mbyte
Load memory	
• Plug-in (SIMATIC Memory Card), max.	32 Gbyte
Backup	
• maintenance-free	Yes
CPU processing times	
for bit operations, typ.	25 ns
for word operations, typ.	32 ns
for fixed point arithmetic, typ.	42 ns
for floating point arithmetic, typ.	170 ns
CPU-blocks	
Number of elements (total)	4 000; Blocks (OB, FB, FC, DB) and UDTs
DB	
• Number range	1 ... 60 999; subdivided into: number range that can be used by the user: 1 ... 59 999, and number range of DBs created via SFC 86: 60 000 ... 60 999
• Size, max.	1.5 Mbyte; For DBs with absolute addressing, the max. size is 64 KB
FB	
• Number range	0 ... 65 535
• Size, max.	300 kbyte
FC	
• Number range	0 ... 65 535
• Size, max.	300 kbyte
OB	
• Size, max.	300 kbyte
• Number of free cycle OBs	100
• Number of time alarm OBs	20
• Number of delay alarm OBs	20
• Number of cyclic interrupt OBs	20; With minimum OB 3x cycle of 250 µs
• Number of process alarm OBs	50

Article number	6ES7511-1AL03-0AB0
- Number of DPV1 alarm OBs - Number of isochronous mode OBs - Number of technology synchronous alarm OBs - Number of startup OBs - Number of asynchronous error OBs - Number of synchronous error OBs - Number of diagnostic alarm OBs	3 2 2 100 4 2 1
Nesting depth	
per priority class	24
Counters, timers and their retentivity	
S7 counter

Protocols	
PROFIsafe	No
Number of connections • Number of connections, max.	128; via integrated interfaces of the CPU and connected CPs / CMs

Article number	6ES7511-1AL03-0AB0
Number of connections reserved for ES/HMI/web	10
Number of connections via integrated interfaces	88
Number of S7 routing paths	16
Redundancy mode H-Sync forwarding	Yes
Media redundancy Media redundancy	only via 1st interface (X1)
MRP	Yes; MRP Automanager according to IEC 62439-2 Edition 2.0, MRP Manager; MRP Client
MRP interconnection, supported	Yes; as MRP ring node according to IEC 62439-2 Edition 3.0
MRPD	Yes; Requirement: IRT
Switchover time on line break, typ.	200 ms; For MRP, bumpless for MRPD
Number of stations in the ring, max.	50
SIMATIC communication PG/OP communication	Yes; encryption with TLS V1.3 pre-selected
S7 routing	Yes
Data record routing	Yes
S7 communication, as server	Yes
S7 communication, as client	Yes
User data per job, max.	See online help (S7 communication, user data size)
Open IE communication - TCP/IP - Data length, max. - several passive connections per port, supported	Yes 64 kbyte Yes
- ISO-on-TCP (RFC1006) - Data length, max.	Yes 64 kbyte
- UDP - Data length, max. - UDP multicast	Yes 2 kbyte; 1 472 bytes for UDP broadcast Yes; max. 78 multicast circuits
DHCP	Yes
DNS	Yes
SNMP	Yes
DCP	Yes
LLDP	Yes
Encryption	Yes; Optional

Article number	6ES7511-1AL03-0AB0
Web server	
• HTTP	Yes; Standard and user pages
• HTTPS	Yes; Standard and user pages
OPC UA	
• Runtime license required	Yes; "Small" license required
• OPC UA Client	Yes; Data Access (registered Read/Write), Method Call
– Application authentication	Yes
– Security policies	Available security policies: None, Basic128Rsa15, Basic256Rsa15, Basic256Sha256
– User authentication	"anonymous" or by user name & password
– Number of connections, max.	4
– Number of nodes of the client interfaces, max.	1 000
– Number of elements for one call of OPC-UA_NodeGetHandleList/OPC-UA_ReadList/OPC-UA_WriteList, max.	300
– Number of elements for one call of OPC-UA_NameSpaceGetIndexList, max.	20
– Number of elements for one call of OPC-UA_MethodGetHandleList, max.	100
– Number of simultaneous calls of the client instructions per connection (except OPC-UA_ReadList, OPC-UA_WriteList, OPC-UA_MethodCall), max.	1
– Number of simultaneous calls of the client instructions OPC-UA_ReadList, OPC-UA_WriteList and OPC-UA_MethodCall, max.	5
– Number of registerable nodes, max.	5 000
– Number of registerable method calls of OPC-UA_MethodCall, max.	100
– Number of inputs/outputs when calling OPC-UA_MethodCall, max.	20
• OPC UA Server	Yes; Data Access (Read, Write, Subscribe), Method Call, Alarms & Condition (A&C), Custom Address Space
– Application authentication	Yes
– Security policies	available security policies: None, Basic128Rsa15, Basic256Rsa15, Basic256Sha256, Aes128Sha256RsaOaep, Aes256Sha256RsaPss
– User authentication	"anonymous" or by user name & password
– GDS support (certificate management)	Yes

Article number	6ES7511-1AL03-0AB0
– Number of sessions, max. – Number of accessible variables, max. – Number of registerable nodes, max. – Number of subscriptions per session, max. – Sampling interval, min. – Publishing interval, min. – Number of server methods, max. – Number of inputs/outputs per server method, max. – Number of monitored items, max. – Number of server interfaces, max. – Number of nodes for user-defined server interfaces, max. • Alarms and Conditions – Number of program alarms – Number of alarms for system diagnostics	32 50 000 10 000 50 100 ms 200 ms 20 20 4 000; for 1 s sampling interval and 1 s send interval 10 of each "Server interfaces" / "Companion specification" type and 20 of the type "Reference namespace" 15 000 Yes 100 50
Further protocols	
• MODBUS	Yes; MODBUS TCP
S7 message functions	
Number of login stations for message functions, max.	32
Program alarms	Yes
Number of configurable program messages, max.	5 000; Program messages are generated by the "Program_Alarm" block, ProDiag or GRAPH
Number of loadable program messages in RUN, max.	2 500
Number of simultaneously active program alarms	
• Number of program alarms • Number of alarms for system diagnostics • Number of alarms for motion technology objects	600 100 160
Test commissioning functions	
Joint commission (Team Engineering)	Yes; Parallel online access possible for up to 5 engineering systems
Status block	Yes; Up to 8 simultaneously (in total across all ES clients)
Single step	No
Number of breakpoints	8
Status/control	

Article number	6ES7511-1AL03-0AB0
- Status/control variable - Variables - Number of variables, max. - of which status variables, max. - of which control variables, max.	Yes Inputs/outputs, memory bits, DBs, distributed I/Os, timers, counters 200; per job 200; per job
Forcing	
- Forcing - Forcing, variables - Number of variables, max.	Yes Peripheral inputs/outputs 200
Diagnostic buffer	
- present - Number of entries, max. - of which powerfail-proof	Yes 1 000 500
Traces	
Number of configurable Traces	4; Up to 512 KB of data per trace are possible
Interrupts/diagnostics/status information	
Diagnostics indication LED	
- RUN/STOP LED - ERROR LED - MAINT LED - STOP ACTIVE LED - Connection display LINK TX/RX	Yes Yes Yes Yes Yes
Supported technology objects	
Motion Control	Yes; Note: The number of technology objects affects the cycle time of the PLC program; selection guide via the TIA Selection Tool
- Number of available Motion Control resources for technology objects - Required Motion Control resources - per speed-controlled axis - per positioning axis - per synchronous axis - per external encoder - per output cam - per cam track - per probe - Positioning axis - Number of positioning axes at motion control cycle of 4 ms (typical value)	1 120 40 80 160 80 20 160 40 11

Article number	6ES7511-1AL03-0AB0
– Number of positioning axes at motion control cycle of 8 ms (typical value)	14
Controller • PID_Compact • PID_3Step • PID-Temp	Yes; Universal PID controller with integrated optimization Yes; PID controller with integrated optimization for valves Yes; PID controller with integrated optimization for temperature
Counting and measuring • High-speed counter	Yes
Standards, approvals, certificates	
Suitable for safety functions	No
Ambient conditions	
Ambient temperature during operation • horizontal installation, min. • horizontal installation, max. • vertical installation, min. • vertical installation, max.	-30 °C; No condensation 60 °C; Display: 50 °C, at an operating temperature of typically 50 °C, the display is switched off -30 °C; No condensation 40 °C; Display: 40 °C, at an operating temperature of typically 40 °C, the display is switched off
Ambient temperature during storage/transportation • min. • max.	-40 °C 70 °C
Altitude during operation relating to sea level • Installation altitude above sea level, max.	5 000 m; Restrictions for installation altitudes > 2 000 m, see manual
configuration / header	
configuration / programming / header	
Programming language – LAD – FBD – STL – SCL – GRAPH	Yes Yes Yes Yes Yes
Know-how protection • User program protection/password protection • Copy protection • Block protection	Yes Yes Yes
Access protection	

Article number	6ES7511-1AL03-0AB0
• protection of confidential configuration data • Password for display • Protection level: Write protection • Protection level: Read/write protection • Protection level: Complete protection	Yes Yes Yes Yes Yes
programming / cycle time monitoring / header	
• lower limit • upper limit	adjustable minimum cycle time adjustable maximum cycle time
Dimensions	
Width	35 mm
Height	147 mm
Depth	129 mm
Weights	
Weight, approx.	336 g

General technical specifications

You can find information on the general technical specifications, such as standards and approvals, electromagnetic compatibility, protection class, etc., in the S7-1500, ET 200MP (<http://support.automation.siemens.com/WW/view/en/59191792>) system manual.

Dimensional drawing

This section includes a dimensional drawing of the module on a mounting rail and a dimensional drawing with the front panel open. Always observe the specified dimensions for installation in cabinets, control rooms, etc.

Dimensional drawings for CPU 1511-1 PN

Figure A-1 Dimensional drawing of CPU 1511-1 PN, front and side views

Figure A-2 Dimensional drawing of CPU 1511-1 PN, side view with front panel open
