## Installation

Sections include:

- Introduction
- LED indication
- Battery safety protection control
- A quick tour
- Mounting installation
- Power cable & control cable Installation

## 2.1 Introduction

The UNO-IPS1560 module serves as temporary power during power spikes. When the power is off, the UNO-IPS1560 can provide backup power for systems to allow operation to continue normally.

UNO-IPS1560 uses two cables to link with system (box/ Panel PC) and power sources. The power cable provides power to the system (box/ Panel PC) and the COM cable provides system battery information including battery capacity or health through a utility.

Refer to the cable connections below for UNO-IPS and the system.
