CHAPTER

ONE

PREFACE

1.1 Who Should Use This Guide

The *EXPRESSCLUSTER X SingleServerSafe for Windows Installation Guide* is intended for system engineers who intend to introduce a system using *EXPRESSCLUSTER X SingleServerSafe* and system administrators who will operate and maintain the introduced system. It describes how to install *EXPRESSCLUSTER X SingleServerSafe*.

1.2 How This Guide Is Organized

- 2. *About EXPRESSCLUSTER X SingleServerSafe*: Explains the functions and requirements of EXPRESSCLUS-TER X SingleServerSafe.
- 3. *Installing EXPRESSCLUSTER X SingleServerSafe*: Describes how to install EXPRESSCLUSTER X Single-ServerSafe.
- 4. *Updating, uninstalling, reinstalling or upgrading*: Describes how to upgrade EXPRESSCLUSTER X Single-ServerSafe, uninstall and reinstall EXPRESSCLUSTER X SingleServerSafe, and upgrade to EXPRESSCLUS-TER X.
- 5. Latest version information: Provides the latest information about EXPRESSCLUSTER X SingleServerSafe.
- 6. Additional information: Provides tips on installing EXPRESSCLUSTER X SingleServerSafe.
- 7. *Notes and Restrictions*: Provides notes and restrictions you need to know before starting the actual operation of EXPRESSCLUSTER X SingleServerSafe.
- 8. *Troubleshooting*: Describes problems you might experience when installing or setting up EXPRESSCLUS-TER X SingleServerSafe and how to resolve them.

1.3 Terms Used in This Guide

EXPRESSCLUSTER X SingleServerSafe, which is described in this guide, uses windows and commands common to those of the clustering software EXPRESSCLUSTER X SingleServerSafe to ensure high compatibility with EX-PRESSCLUSTER X SingleServerSafe in terms of operation and other aspects. Therefore, cluster-related terms are used in parts of the guide.

The terms used in this guide are defined below.

Cluster, cluster system A single server system using EXPRESSCLUSTER X SingleServerSafe

Cluster shutdown, reboot Shutdown or reboot of a system using EXPRESSCLUSTER X SingleServerSafe

Cluster resource A resource used in EXPRESSCLUSTER X SingleServerSafe

Cluster object A resource object used in EXPRESSCLUSTER X SingleServerSafe

Failover group A group of group resources (such as applications and services) used in EXPRESSCLUSTER X SingleServerSafe

1.4 EXPRESSCLUSTER X SingleServerSafe Documentation Set

The EXPRESSCLUSTER X SingleServerSafe manuals consists of the three guides below. The title and purpose of each guide is described below:

EXPRESSCLUSTER X SingleServerSafe Installation Guide

This guide is intended for system engineers who intend to introduce a system using EXPRESSCLUSTER X SingleServerSafe and describes how to install EXPRESSCLUSTER X SingleServerSafe.

EXPRESSCLUSTER X SingleServerSafe Configuration Guide

This guide is intended for system engineers who intend to introduce a system using EXPRESSCLUSTER X SingleServerSafe and system administrators who will operate and maintain the introduced system. It describes how to set up EXPRESSCLUSTER X SingleServerSafe.

EXPRESSCLUSTER X SingleServerSafe Operation Guide

This guide is intended for system administrators who will operate and maintain an introduced system that uses EXPRESSCLUSTER X SingleServerSafe. It describes how to operate EXPRESSCLUSTER X SingleServerSafe.

1.5 Conventions

In this guide, Note, Important, See also are used as follows:

Note: Used when the information given is important, but not related to the data loss and damage to the system and machine.

Important: Used when the information given is necessary to avoid the data loss and damage to the system and machine.

See also:

Used to describe the location of the information given at the reference destination.

The following conventions are used in this guide.

Convention	Usage	Example
Bold	Indicates graphical objects, such as fields, list boxes,	
	menu selections, buttons, labels, icons, etc.	In User Name, type your
		name.
		On the File menu, click
		Open Database.
Angled bracket within the	Indicates that the value specified inside of the angled	clpstat -s [-h
command line	bracket can be omitted.	host_name]
Monospace	Indicates path names, commands, system output (mes-	c:\Program files\
	sage, prompt, etc), directory, file names, functions and	EXPRESSCLUSTER
	parameters.	
bold	Indicates the value that a user actually enters from a	
	command line.	Enter the following:
		clpcl -s -a
	Indicates that users should replace italicized part with	clpstat -s [-h
italic	values that they are actually working with.	host_name]

In the figures of this guide, this icon represents EXPRESSCLUSTER X SingleServerSafe.

ABOUT EXPRESSCLUSTER X SINGLESERVERSAFE

This chapter describes the functions and requirements of EXPRESSCLUSTER X SingleServerSafe.

This chapter covers:

- 2.1. What is EXPRESSCLUSTER X SingleServerSafe?
- 2.2. Checking system requirements for EXPRESSCLUSTER X SingleServerSafe
- 2.3. Preparing and verifying the server environment before installation

2.1 What is EXPRESSCLUSTER X SingleServerSafe?

EXPRESSCLUSTER X SingleServerSafe is set up on a server. It monitors for application errors and hardware failures on the server and, upon detecting an error or failure, restarts the failed application or reboots the server so as to ensure greater server availability.

1. Occurrence of application failure

Fig. 2.1: Occurrence of failure

Fig. 2.2: Recovery from failure (Application restart)

2. Occurrence of hardware failure

Fig. 2.3: Occurrence of failure

2.1.1 EXPRESSCLUSTER X SingleServerSafe software configuration

EXPRESSCLUSTER X SingleServerSafe consists of following two software applications:

- a) EXPRESSCLUSTER Server (Main module) This is a main module of EXPRESSCLUSTER X SingleServerSafe. Install it on the server.
- b) EXPRESSCLUSTER Cluster WebUI

This is a tool to create the configuration data of EXPRESSCLUSTER X SingleServerSafe and to manage EXPRESSCLUSTER X SingleServerSafe operations.

It uses a Web browser as a user interface.

Server	Management PC (Client)
(a) Main module	(b) Cluster WebUI

Fig. 2.5: Software configuration

2.2 Checking system requirements for EXPRESSCLUSTER X Single-ServerSafe

Check the configuration and operation requirements below for each machine to be used.

• EXPRESSCLUSTER X SingleServerSafe

Machine on which the EXPRESSCLUSTER X Sin-	PC that supports one of the following operating sys-
gleServerSafe can be installed	tems.
Supported operation systems	
	Windows Server 2016 Standard
	Windows Server 2016 Datacenter
	Windows Server 2019 Standard
	Windows Server 2019 Datacenter
	Windows Server 2022 Standard
	Windows Server 2022 Datacenter
Memory size	
	User mode: 256 MB^1
	Kernel mode: 32MB
Disk Size	
	Initial size at installation: 100 MB
	During operation: 5.0 GB

• Cluster WebUI

Supported browsers	
	Internet Explorer 11
	Internet Explorer 10
	Firefox
	Google Chrome
	Microsoft Edge (Chromium)
Memory size	User mode 500 MB
Disk size	200 MB

Note:

When accessing Cluster WebUI with Internet Explorer 11, the Internet Explorer may stop with an error. In order to avoid it, please upgrade the Internet Explorer into KB4052978 or later.

Additionally, in order to apply KB4052978 or later to Windows 8.1/Windows Server 2012R2, apply KB2919355 in advance. For details, see the information released by Microsoft.

Note: No mobile devices, such as tablets and smartphones, are supported.

¹ excepting for optional products.

2.2.1 Operation environment for SNMP linkage functions

EXPRESSCLUSTER with SNMP Service of Windows is validated on following OS.

x86_64 version

OS	Remarks
Windows Server 2016	

2.2.2 Operation environment for JVM monitor

The use of the JVM monitor requires a Java runtime environment.

Java(TM) Runtime Environment	Version 7.0 Update 6 (1.7.0_6) or later
Java(TM) Runtime Environment	Version 8.0 Update 11 (1.8.0_11) or later
Java(TM) Runtime Environment	Version 9.0 (9.0.1) or later
Java(TM) SE Development Kit	Version 11.0 (11.0.5) or later

2.2.3 Operation environment for system monitor or function of collecting system resource information

The use of the System Resource Agent requires the Microsoft .NET Framework environment. Microsoft .NET Framework 4.5 or later

Microsoft .NET Framework 4.5 Japanese Language Pack or later

Note: On the OS of Windows Server 2012 or later, NET Framework 4.5 version or later is pre-installed (The version of the pre-installed one varies depending on the OS).

2.3 Preparing and verifying the server environment before installation

After installing the hardware, verify the following:

- 2.3.1. Verifying the network settings (Required)
- 2.3.2. Verifying the firewall settings (Required)
- 2.3.3. *Turning off the power saving function (Required)*
- 2.3.4. Setup of OpenSSL (Optional)

2.3.1 Verifying the network settings (Required)

Check the network settings by using the ipconfig and ping commands.

- IP Address
- Host name

2.3.2 Verifying the firewall settings (Required)

By default, EXPRESSCLUSTER X SingleServerSafe uses the port numbers below. You can change these port numbers by using the Cluster WebUI. Do not access any of these port numbers from a program other than EXPRESS-CLUSTER X SingleServerSafe. When setting up a firewall, set up EXPRESSCLUSTER X SingleServerSafe so that it can access the port numbers below.

After installing EXPRESSCLUSTER X SingleServerSafe, you can use the clpfwctrl command to configure a firewall. For more information, see "EXPRESSCLUSTER X SingleServerSafe Operation Guide" -> "EXPRESSCLUSTER X SingleServerSafe command reference" -> "Adding a firewall rule (clpfwctrl command)". Ports to be set with the clpfwctrl command are marked with \checkmark in the clpfwctrl column of the table below. The applicable protocols are ICMPv4 and ICMPv6.

From		То		Remarks	clpfwctr
Server	Automatic alloca-	Server	29001/TCP	Internal communi-	\checkmark
	tion			cation	
Server	Automatic alloca-	Server	29002/TCP	Data transfer	\checkmark

	tion			communication	
Server	29106/UDP	Server	29106/UDP	Heartbeat (kernel	\checkmark
				mode)	

• Internal processing in the local server

• From the client to the server

From			То		Remarks	clpfwctr
Restful API	Automatic	alloca-	Server	29009/TCP	http communication	\checkmark
client	tion					

• From the Cluster WebUI to the server

From			То		Remarks	clpfwctr
Cluster We-	Automatic	alloca-	Server	29003/TCP	http communication	\checkmark
bUI	tion					

• Others

From			То		Remarks	clpfwct
Server	Automatic	allo-	Server	Management port number set	JVM monitor	\checkmark
	cation			by the Cluster WebUI		
Server	Automatic	allo-	Monitoring	Connection port number set by	JVM monitor	
	cation		target	the Cluster WebUI		

Note: An available port number at the time is automatically assigned.

The automatic allocation range for the communication port number controlled by OS may overlap with the communication port number used by EXPRESSCLUSTER X SingleServerSafe.

If so, change the port number used by EXPRESSCLUSTER X SingleServerSafe or the automatic allocation range for the communication port number controlled by OS.

For details on how to check or change the automatic allocation range for the communication port number controlled by OS, refer to "Getting Started Guide" for EXPRESSCLUSTER X.

2.3.3 Turning off the power saving function (Required)

In EXPRESSCLUSTER X SingleServerSafe, the power saving function (for example, standby or hibernation) cannot be used. Make sure to turn off the power saving function.

2.3.4 Setup of OpenSSL (Optional)

Encrypted communication via HTTPS connection can be performed by using the following functions:

- Cluster WebUI
- · Witness heartbeat
- HTTP network partition resolution resource

Set up OpenSSL, and prepare a certificate file and a private key file.

The prepared files will be used for configuring the settings in the config mode of Cluster WebUI: the "Encryption tab" of "Cluster properties" in "Other setting details" in the "EXPRESSCLUSTER X SingleServerSafe Configuration Guide".

CHAPTER

THREE

INSTALLING EXPRESSCLUSTER X SINGLESERVERSAFE

This chapter describes how to install EXPRESSCLUSTER X SingleServerSafe. To install EXPRESSCLUSTER X SingleServerSafe, install the EXPRESSCLUSTER Server, which is the main module of EXPRESSCLUSTER Single-ServerSafe.

This chapter covers:

• 3.1. Installing the EXPRESSCLUSTER Server

3.1 Installing the EXPRESSCLUSTER Server

Install the EXPRESSCLUSTER Server, which is the main module of EXPRESSCLUSTER X SingleServerSafe, on the server machine in the system.

License registration is required in installing the Server. Make sure to have the required license file or license sheet.

3.1.1 Installing EXPRESSCLUSTER X SingleServerSafe for the first time

To install EXPRESSCLUSTER X SingleServerSafe, follow the procedure below.

Note: To install EXPRESSCLUSTER X SingleServerSafe, use an account that has administrator privileges.

Note: Installing EXPRESSCLUSTER X SingleServerSafe disables the Windows media sense function that deactivates an IP address if a link failure occurs due to disconnecting the LAN cable or some other reason.

Note:

If the Windows SNMP Service has already been installed, the SNMP linkage function will be automatically set up when the EXPRESSCLUSTER Server is installed. If, however, the Windows SNMP Service has not yet been installed, the SNMP linkage function will not be set up.

When setting up the SNMP linkage function after installing the EXPRESSCLUSTER Server, refer to "3.1.3. *Setting up the SNMP linkage function manually*".

- 1. Insert the Installation DVD-ROM to the DVD-ROM drive.
- 2. Select NEC EXPRESSCLUSTER® SingleServerSafe for Windows.

Note: If the menu screen does not open automatically, double-click menu.exe in the root folder of the DVD-ROM.

- 3. Select NEC EXPRESSCLUSTER® X SingleServerSafe 5.0 for Windows.
- 4. [Welcome to the InstallShield Wizard for NEC EXPRESSCLUSTER SingleServerSafe] is displayed. Click Next.
- 5. The **Choose Destination Location** dialog box is displayed. When changing the install destination, click **Browse** to select a directory. Click **Next**.
- 6. The Ready to Install the Program dialog box is displayed. Click Install to start the installation.
- 7. When the installation successfully finishes, the **Port Number** dialog box is displayed. Normally, click **Next** without changing the default setting.

Note: The port number configured here needs to be configured again when creating the configuration data. For details on port number, refer to "Cluster properties" in "Other setting details" in the "Configuration Guide".

8. License Manager is displayed. Click **Register** to register the license. For detailed information on the registration procedure, refer to "6.2.1. *Registering a license by specifying a license file*" in "6. *Additional information*" in this guide.

	License Manager 📃 🗕 🗖 🗙
Regis Selec	ster, refer or delete licenses. ct the desired menu.
	Register Register license information.
	Refer / Delete Refer/delete license information.
	< <u>B</u> ack <u>N</u> ext > Finish

- 9. Click Finish to close the License Manager dialog box.
- 10. [InstallShield Wizard Complete] is displayed. Select [Yes, I want to restart my computer now.] and click **Finish** to restart the server. If you want to restart the server later, select [No, I will restart my computer later.] and click **Finish**.

3.1.2 Installing EXPRESSCLUSTER X SingleServerSafe in Silent Mode

In silent mode, the EXPRESSCLUSTER X SingleServerSafe is installed automatically without displaying any dialog box to prompt a user to response while the installer is running. This installation function is useful when the installation folder and installation options for all server machines are the same. This function not only eliminates the user's effort but also prevents wrong installation due to wrong specifications.

Install the EXPRESSCLUSTER X SingleServerSafe in all servers configuring the cluster by following the procedure below.

Note: To install EXPRESSCLUSTER X SingleServerSafe, use an account that has administrator privileges.

Note: Installing EXPRESSCLUSTER X SingleServerSafe disables the Windows media sense function that deactivates an IP address if a link failure occurs due to disconnecting the LAN cable or some other reason.

Note:

If the Windows SNMP Service has already been installed, the SNMP linkage function will be automatically set up when the EXPRESSCLUSTER Server is installed. If, however, the Windows SNMP Service has not yet been installed, the SNMP linkage function will not be set up.

When setting up the SNMP linkage function after installing the EXPRESSCLUSTER Server, refer to "3.1.3. *Setting up the SNMP linkage function manually*".

Preparation

If you want to change the installation folder (default: C:\Program Files\EXPRESSCLUSTER SSS), create a response file in advance following the procedure below.

- 1. Copy the response file from the installation DVD-ROM to any accessible location in the server. Copy the following file in the installation DVD-ROM.
 - Windows\5.0\common\server\x64\response\setup_sss_inst_en.iss
- 2. Open the response file (setup_inst_jp.iss) with a text editor, and change the folder written in the szDir line into the above accessible location.

```
Count=4

Dlg1={8493CDB6-144B-4330-B945-1F2123FADD3A}-SdAskDestPath-0

Dlg2={8493CDB6-144B-4330-B945-1F2123FADD3A}-SdStartCopy2-0

Dlg3={8493CDB6-144B-4330-B945-1F2123FADD3A}-SdFinishReboot-0

[{8493CDB6-144B-4330-B945-1F2123FADD3A}-SdWelcome-0]

Result=1

[{8493CDB6-144B-4330-B945-1F2123FADD3A}-SdAskDestPath-0]

szDir=C:\Program Files\EXPRESSCLUSTER SSS

Result=1
```

Installation procedure

1. Execute the following command from the command prompt to start setup.

* <Path of silent-install.bat>:

Windows\5.0\common\server\x64\silent-install.bat in the installation DVD-ROM * When installing the EXPRESSCLUSTER X SingleServerSafe in the default directory (C:\Program Files\EXPRESSCLUSTER SSS), omit <*Path of response file>*.

- 2. Restart the server.
- 3. Execute the following command from the command prompt to register the license.

"<Installation folder>\bin\clplcnsc.exe" -i <Path of license file>

3.1.3 Setting up the SNMP linkage function manually

Note: If you only use the SNMP trap transmission function, this procedure is not required.

To handle information acquisition requests on SNMP, the Windows SNMP Service must be installed separately and the SNMP linkage function must be registered separately.

If the Windows SNMP Service has already been installed, the SNMP linkage function will be automatically registered when the EXPRESSCLUSTER Server is installed. If, however, the Windows SNMP Service has not been installed, the SNMP linkage function will not be registered.

When the Windows SNMP Service has not been installed, follow the procedure below to manually register the SNMP linkage function.

Note: Use an Administrator account to perform the registration.

- 1. Install the Windows SNMP Service.
- 2. Stop the Windows SNMP Service.
- 3. Register the SNMP linkage function of EXPRESSCLUSTER with the Windows SNMP Service.
 - 3-1. Start the registry editor.
 - 3-2. Open the following key:

3-3. Specify the following to create a string value in the opened key:

Value name :mgtmib Value type :REG_SZ Value data : SOFTWARE\NEC\EXPRESSCLUSTER\SnmpAgent\mgtmib\CurrentVersion

- 3-4. Exit the registry editor.
- 4. If a cluster is being started up, suspend and resume the cluster on Cluster WebUI or with the clpcl command.
- 5. Start the Windows SNMP Service.

Note: Configure the settings required for SNMP communication on Windows SNMP Service.

UPDATING, UNINSTALLING, REINSTALLING OR UPGRADING

This chapter describes how to update to the latest version of EXPRESSCLUSTER X SingleServerSafe and uninstall or reinstall EXPRESSCLUSTER X SingleServerSafe. Also, this chapter describes how to upgrade EXPRESSCLUSTER X SingleServerSafe to EXPRESSCLUSTER X.

This chapter covers:

- 4.1. Updating EXPRESSCLUSTER X SingleServerSafe
- 4.2. Uninstalling EXPRESSCLUSTER X SingleServerSafe
- 4.3. Reinstalling EXPRESSCLUSTER X SingleServerSafe
- 4.4. Upgrading to EXPRESSCLUSTER X

4.1 Updating EXPRESSCLUSTER X SingleServerSafe

This section describes how to update from the old version of EXPRESSCLUSTER X SingleServerSafe to the latest version of it.

4.1.1 Updating from the old EXPRESSCLUSTER X SingleServerSafe version

Before starting the update, read the following notes.

- The upgrade procedure described in this section is valid for EXPRESSCLUSTER X SingleServerSafe 3.3 for Windows (internal version 11.35) or later.
- In EXPRESSCLUSTER X SingleServerSafe 4.2 for Windows or later, port numbers for EXPRESSCLUSTER have been added. If you upgrade from EXPRESSCLUSTER X SingleServerSafe 4.1 for Windows or earlier, make necessary ports accessible beforehand.

For information on port numbers for EXPRESSCLUSTER, refer to "2.3.2. *Verifying the firewall settings (Required)*".

• EXPRESSCLUSTER X SingleServerSafe must be updated with the account having the Administrator's privilege.

See also:

For the procedure of updating between the different versions of the same major version, refer to the "Update Procedure Manual".

The following procedure describes how to update from EXPRESSCLUSTER X SingleServerSafe 3.3 or 4.x for Windows to EXPRESSCLUSTER X SingleServerSafe 5.0 for Windows.

- 1. Make sure that the server and all the resources are in the normal status by using the Cluster WebUI, WebManager or **clpstat** command.
- Save the current configuration file with the Cluster WebUI, Builder or clpcfctrl command. For details about saving the configuration file with clpcfctrl command, refer to "Applying and backing up configuration data (clpcfctrl command)" -> "Backing up configuration data (clpcfctrl --pull)" in "EXPRESSCLUSTER X SingleServerSafe command reference" in the "EXPRESSCLUSTER X SingleServerSafe Operation Guide".
- 3. Uninstall EXPRESSCLUSTER X SingleServerSafe from the server. For details about the uninstallation procedure, refer to " 4.2.1. Uninstalling EXPRESSCLUSTER X SingleServerSafe".
- 4. Install the EXPRESSCLUSTER X 5.0 SingleServerSafe on the server. For details about the installation procedure, refer to "3.1. *Installing the EXPRESSCLUSTER Server*" in "3. *Installing EXPRESSCLUSTER X Single-ServerSafe*".
- 5. On the server with EXPRESSCLUSTER X SingleServerSafe installed as above, execute the command for converting configuration data.
 - a. Move to the work directory (such as C:\tmp) in which the conversion command is to be executed.
 - b. To the moved work directory, copy and deploy the cluster configuration data backed up in step 2. Deploy clp.conf and the scripts directory.

Note:

If backed up on Cluster WebUI, the cluster configuration data is zipped. Unzip the file, and clp.conf and the scripts directory will be extracted.

c. Execute the following command to convert the cluster configuration data:

- # clpcfconv.bat -i .
- d. Under the work directory, zip the cluster configuration data (clp.conf) and the scripts directory.

Note: Create the zip file so that when unzipped, the clp.conf file and scripts directory are created.

- 6. Open the config mode of Cluster WebUI, and click **Import**. Import the cluster configuration data zipped in step 5.
- 7. Of the cluster configuration data, manually update its items if necessary. See "Removed Functions" of "Notes on upgrading EXPRESSCLUSTER" in "Notes and Restrictions" in the "Getting Started Guide". Then, if you have used any of the functions with its corresponding action described in the Action column of the table, change the cluster configuration data according to the described action.
- 8. Click **Export** of the Cluster WebUI to apply the configuration data.
- 9. Open the operation mode of Cluster WebUI, and start the cluster.
- 10. Updating completes. Check that the server is operating normally by the clpstat command or Cluster WebUI.

4.2 Uninstalling EXPRESSCLUSTER X SingleServerSafe

4.2.1 Uninstalling EXPRESSCLUSTER X SingleServerSafe

Note: You must log on as an Administrator to uninstall EXPRESSCLUSTER X SingleServerSafe.

To uninstall EXPRESSCLUSTER X SingleServerSafe, follow the procedure below.

1. Change the service startup type to the manual startup.

clpsvcctrl.bat --disable -a

- 2. Reboot the server.
- 3. Click Program and Features in Control Panel.
- 4. Select NEC EXPRESSCLUSTER SingleServerSafe, and then click Uninstall.
- 5. Click Yes in the uninstallation confirmation dialog box. If you click No, uninstallation will be canceled.
- 6. If the SNMP service is started, the message to confirm to stop the SNMP service is displayed. Click Yes. If you click No, uninstallation will be canceled.

	NEC ExpressCluster SingleServerSafe Setup
?	The SNMP service is running. You need to stop the SNMP service before you perform uninstallation. Do you want to stop the SNMP service now?
	<u>Y</u> es <u>N</u> o

7. A message is displayed asking whether to return the media sense function (TCP/IP disconnection detection) to the state it was in before installing the EXPRESSCLUSTER Server. Click **Yes** to return to the state it was in before installing the EXPRESSCLUSTER Server. If you click **No**, the EXPRESSCLUSTER Server will be uninstalled with the media sense function disabled.

NEC ExpressCluster SingleServerSafe Setup
The registry settings to disable the media sense function of TCP/IP disconnect detection are going to be reset. Is it OK?
<u>Y</u> es <u>N</u> o

- 8. NEC ExpressCluster SingleSeverSafe Setup is displayed. Click Finish.
- 9. The confirmation message whether to restart the computer is displayed. Select **Yes, I want to restart my computer** or **No, I will restart my computer later.** And click **Finish**. Uninstallation of the EXPRESSCLUSTER Server is completed.

4.3 Reinstalling EXPRESSCLUSTER X SingleServerSafe

4.3.1 Reinstalling the EXPRESSCLUSTER X SingleServerSafe

To reinstall the EXPRESSCLUSTER X SingleServerSafe, prepare the configuration data created using the Cluster WebUI (or the latest data if you changed the configuration).

After changing the configuration, make sure to save the latest configuration data. In addition to saving it to the Cluster WebUI after creation, you can back up the configuration data by using the clpcfctrl command. For details, see "Applying and backing up configuration data (clpcfctrl command)" in "EXPRESSCLUSTER X SingleServerSafe command reference" in the "EXPRESSCLUSTER X SingleServerSafe Operation Guide".

For details, see "Applying and backing up configuration data (clpcfctrl command)" -> "Backing up configuration data (clpcfctrl --pull)" in "EXPRESSCLUSTER X SingleServerSafe command reference" in the "EXPRESSCLUSTER X SingleServerSafe Operation Guide".

To reinstall the EXPRESSCLUSTER X SingleServerSafe, follow the procedures below:

- 1. Back up the configuration data.
- 2. Uninstall the EXPRESSCLUSTER X SingleServerSafe.

If reinstalling the OS, it is not necessary to uninstall the EXPRESSCLUSTER X SingleServerSafe. However, when reinstalling in the folder in which the EXPRESSCLUSTER X SingleServerSafe was formerly installed, the files in the installation folder must be deleted.

- 3. Shut down the OS when uninstalling the EXPRESSCLUSTER X SingleServerSafe is completed.
- 4. Install the EXPRESSCLUSTER X SingleServerSafe and register the license as necessary. Shut down the OS when installing EXPRESSCLUSTER X SingleServerSafe completed.
- 5. Apply the configuration data to the server.

To apply the configuration data, load the backup data by using the Cluster WebUI, and then upload it. For details, see "Applying configuration data" in "Creating configuration data" in the "EXPRESSCLUSTER X SingleServerSafe Configuration Guide".

4.4 Upgrading to EXPRESSCLUSTER X

When upgrading EXPRESSCLUSTER X SingleServerSafe to EXPRESSCLUSTER X, you can migrate the configuration data created using the Cluster WebUI (or the latest data if you changed the configuration).

In this case, save the latest configuration data before starting the upgrade. In addition to saving it to the Cluster WebUI after creation, you can back up the configuration data by using the clpcfctrl command. For details, see "Applying and backing up configuration data (clpcfctrl command)" in "EXPRESSCLUSTER X SingleServerSafe command reference" in the "EXPRESSCLUSTER X SingleServerSafe Operation Guide".

To upgrade EXPRESSCLUSTER X SingleServerSafe to EXPRESSCLUSTER X, follow the procedure below.

- 1. Back up the configuration data.
- 2. Uninstall EXPRESSCLUSTER X SingleServerSafe from the server for which to perform the upgrade. For details about the uninstallation procedure, see "4.2.1. *Uninstalling EXPRESSCLUSTER X SingleServerSafe*".
- 3. Shut down the OS when uninstalling the EXPRESSCLUSTER X SingleServerSafe is completed.
- 4. Install EXPRESSCLUSTER X, and set up its environment. You can use the backup configuration data for this process. For details about how to set up EXPRESSCLUSTER X, see the EXPRESSCLUSTER X manual.

Note:

For EXPRESSCLUSTER X, register the following licenses:

- EXPRESSCLUSTER X SingleServerSafe (two-CPU license)
- EXPRESSCLUSTER X SingleServerSafe upgrade license

LATEST VERSION INFORMATION

The latest information on the upgraded and improved functions is described in details.

This chapter covers:

- 5.1. EXPRESSCLUSTER X SingleServerSafe version and corresponding manual edition
- 5.2. New features and improvements
- 5.3. Corrected information

5.1 EXPRESSCLUSTER X SingleServerSafe version and corresponding manual edition

This guide assumes the version of EXPRESSCLUSTER X SingleServerSafe below for its descriptions. Note the version of EXPRESSCLUSTER X SingleServerSafe and corresponding manual edition.

5.2 New features and improvements

The following features and improvements have been released.

1 13.00 Windows Server 2022 is now supported. 2 13.00 Along with the major upgrade, some functions have been removed. For details, refer to the list of removed functions. 3 13.00 Added a function to give a notice in an alert log that the server restart count was reset as the final action against the detected activation error or deactivation error eresource. 4 13.00 Added a function to collectively change actions (followed by OS shutdowns such as a recovery action following an error detected by a monitor resource) into OS reboots. 6 13.00 Improved the alert message regarding the wait process for start/stop between groups. 7 13.00 The display option for the clystat configuration information has allowed displaying the setting value of the resource start attribute. 8 13.00 The chycl/clystdn command has allowed specifying the -h option even when the cluster service on the local server is stopped. 9 13.00 In the config mode of Cluster WebUI, a group can now be deleted with the group resource registered. 11 13.00 Changed the content of the error message that a communication timeout occurred in Cluster WebUI. 13 13.00 Added a function to move a group resource gristered in the config mode of Cluster W	No.	Internal Version	Contents
2 13.00 Along with the major upgrade, some functions have been removed. For details, refer to the list of removed functions. 3 13.00 Added a function to give a notice in an alter log that the server restart count was reset as the final action against the detected activation error or deactivation error of a group resource or against the detected error of a monitor resource. 4 13.00 Added the clp/wetr/ command for adding a firewall rule. 5 13.00 Added a function to collectively change actions (followed by OS shutdowns such as a recovery action following an error detected by a monitor resource) into OS reboots. 6 13.00 The display option for the clpstat configuration information has allowed displaying the setting value of the resource start attribute. 8 13.00 The clp/clpstdn command has allowed specifying the -h option even when the cluster service on the local server is stopped. 9 13.00 A warning message is now displayed when Cluster WebUI is connected via a non-actual IP address and is switched to config mode. 10 13.00 In the config mode of Cluster WebUI, a group resource, or monitor resource registered. 11 13.00 Changed the context of the error message that a communication timeout occurred in the config mode of Cluster WebUI. 12 13.00 Added a function to move a group resource registered in the config mode of Cluster WebUI. 13 13.00	1	13.00	Windows Server 2022 is now supported.
refer to the list of removed functions. 3 13.00 Added a function to give a notice in an alert log that the server restart count was reset as the final action against the detected activation error or deactivation error or f a group resource or against the detected error of a monitor resource. 4 13.00 Added the clpfwetrl command for adding a firewall rule. 5 13.00 Added a function to collectively change actions (followed by OS shutdowns such as a recovery action following an error detected by a monitor resource) into OS reboots. 6 13.00 The display option for the clpstat configuration information has allowed displaying the setting value of the resource start attribute. 8 13.00 The display option for the clpstat configuration information has allowed displaying the setting value of the resource start attribute. 9 13.00 The display option for the clpstat config mode. 10 13.00 A warning message is now displayed when Cluster WebUI is connected via a non-actual IP address and is switched to config mode. 11 13.00 Changed the content of the error message that a communication timeout occurred in Cluster WebUI. 12 13.00 Added a function to move a group resource registered in the config mode of Cluster WebUI. 13 13.00 Changed the content of the error message that a communication timeout occurred in the config mode	2	13.00	Along with the major upgrade, some functions have been removed. 2213.00Added a function to delay the start of the cluster service for starting the OS.			file from the old version to the current one.
	22	13.00	Added a function to delay the start of the cluster service for starting the OS.

No.	Internal Version	Contents
23	13.00	Details such as measures can now be displayed for error results of checking cluster configuration data in Cluster WebUI.
24	13.00	The OS type can be specified for specifying the create option of the clpcfset command.
25	13.00	Added a function to delete a resource or parameter from cluster configuration data, which is enabled by adding the del option to the clpcfset command.
26	13.00	Added the clpcfadm.py command, which enhances the interface for the clpcfset command.
27	13.00	The start completion timing of an AWS DNS resource has been changed to the timing before which the following is confirmed: The record set was propagated to AWS Route 53.
28	13.00	Changed the default value for [Wait Time to Start Monitoring] of AWS DNS monitor resources to 300 seconds.
29	13.00	The clpstat command can now be run duplicately.
30	13.00	Added the Node Manager service.
31	13.00	Added a function for statistical information on heartbeat.
32	13.00	HTTP monitor resources now support digest authentication.
33	13.00	The FTP server that uses FTPS for the FTP monitor resource can now be mon- itored.
34	13.00	Multiple system monitor resources can now be registered.
35	13.00	Multiple process resource monitor resources can now be registered.
36	13.00	Added a function to target only specific processes for a process resource monitor resource.
37	13.00	A single service monitor resource alone can now monitor any service.

Table 5.2 – continued from previous page

5.3 Corrected information

Modification has been performed on the following minor versions.

Critical level:

L

Operation may stop. Data destruction or mirror inconsistency may occur. Setup may not be executable.

М

Operation stop should be planned for recovery. The system may stop if duplicated with another fault.

S

A matter of displaying messages. Recovery can be made without stopping the system.

No.	Version in which the problem has been solved / Version in which the problem occurred	Phenomenon	Level	Occurrence condition/ Occurrence frequency
1	13.00 / 12.10 to 12.32	In the config mode of Cluster We- bUI, modifying a comment on a group resource may not be applied.	S	This problem occurs in the follow- ing case: A comment on a group re- source is modified, the [Apply] but- ton is clicked, the change is undone, and then the [OK] button is clicked.
2	13.00 / 12.10 to 12.32	In the config mode of Cluster We- bUI, modifying a comment on a monitor resource may not be ap- plied.	S	This problem occurs in the follow- ing case: A comment on a moni- tor resource is modified, the [Apply] button is clicked, the change is un- done, and then the [OK] button is clicked.
3	13.00 / 12.10 to 12.32	In the config mode of Cluster We- bUI, the [Install Path] item is not re- quired to be entered in the [Monitor (special)] tab of a WebLogic moni- tor resource.	S	This problem always occurs.
4	13.00 / 12.00 to 12.32	In the status screen of Cluster We- bUI, a communication timeout dur- ing the operation of a cluster causes a request to be repeatedly issued.	М	This problem always occurs when a communication timeout occurs be- tween Cluster WebUI and a cluster server.

CHAPTER

SIX

ADDITIONAL INFORMATION

This chapter provides tips on installing EXPRESSCLUSTER X SingleServerSafe.

This chapter covers:

- 6.1. EXPRESSCLUSTER X SingleServerSafe services
- 6.2. Using the License Manager

6.1 EXPRESSCLUSTER X SingleServerSafe services

EXPRESSCLUSTER X SingleServerSafe consists of the system services listed below.

System Service Name	Explanation
EXPRESSCLUSTER	EXPRESSCLUSTER
EXPRESSCLUSTER Disk Agent	Not used for EXPRESSCLUSTER X SingleServerSafe
EXPRESSCLUSTER API	EXPRESSCLUSTER Restful API control
EXPRESSCLUSTER Event	Event log output
EXPRESSCLUSTER Information Base	Cluster information management
EXPRESSCLUSTER Java Resource Agent	Java Resource Agent
EXPRESSCLUSTER Manager	WebManager Server
EXPRESSCLUSTER X Server	EXPRESSCLUSTER Server
EXPRESSCLUSTER SingleServerSafe	SingleServerSafe process
EXPRESSCLUSTER System Resource Agent	System Resource Agent
EXPRESSCLUSTER Transaction	Communication process
EXPRESSCLUSTER Web Alert	Alert synchronization

6.2 Using the License Manager

The **Start** menu contains the menu for EXPRESSCLUSTER SingleServerSafe. You can start the License Manager from this menu.

6.2.1 Registering a license by specifying a license file

When using a trial license, obtain a license file instead of a license sheet. The following procedure describes how to register a license by specifying a license file.

Note: To register a license, use an account that has administrator privileges.

- 1. On the Start menu, click License Manager of NEC EXPRESSCLUSTER SingleServerSafe.
- 2. The License Manager dialog box is displayed. Click Register.
- 3. A dialog box is displayed for selecting the license registration method. Click Register with License File.
- 4. The License File Specification dialog box is displayed. In the License File Specification dialog box, select the license file to be registered and then click **Open**.
- 5. The message confirming registration of the license is displayed. Click OK.
- 6. Click Finish to close the license manager.

6.2.2 Referencing or deleting a registered license

The following procedure describes how to refer to and delete the registered license.

- 1. On the Start menu, click License Manager of NEC EXPRESSCLUSTER SingleServerSafe.
- 2. The License Manager dialog box is displayed. Click Refer/Delete.
- 3. The registered licenses are listed.
- 4. Select the license to delete and click **Delete**.
- 5. The confirmation message to delete the license is displayed. Click OK.

6.2.3 Switching from the trial license to the product license

When registering the official license to a server running with the trial license, you can add the official license without deleting the trial license. When you list the registered licenses, both the official and trial licenses are shown, but there is no problem.

CHAPTER

SEVEN

NOTES AND RESTRICTIONS

This chapter provides information on known problems and how to troubleshoot the problems.

This chapter covers:

- 7.1. Before installing EXPRESSCLUSTER X SingleServerSafe
- 7.2. Upgrading EXPRESSCLUSTER X SingleServerSafe

7.1 Before installing EXPRESSCLUSTER X SingleServerSafe

Consideration after installing an operating system, when configuring OS and disks are described in this section.

7.1.1 File system

Use NTFS as the file system for the partition on which to install the OS.

7.1.2 Mail reporting

The mail reporting function is not supported by STARTTLS and SSL.

7.2 Upgrading EXPRESSCLUSTER X SingleServerSafe

This section describes notes on upgrading EXPRESSCLUSTER X SingleServerSafe after starting cluster operation.

7.2.1 Changed functions

The following describes the functions changed for each of the versions:

Internal Version 12.00

· Management tool

The default management tool has been changed to Cluster WebUI. If you want to use the conventional WebManager as the management tool, specify

http://management IP address of management group or actual IP_ →address:port number of the server in which EXPRESSCLUSTER Server_ →is installed/main.htm

in the address bar of a web browser.

Internal Version 12.10

· Configuration tool

The default configuration tool has been changed to Cluster WebUI, which allows you to manage and configure clusters with Cluster WebUI.

• Cluster statistical information collection function

By default, the cluster statistical information collection function saves statistics information files under the installation path. To avoid saving the files for such reasons as insufficient disk capacity, disable the cluster statistical information collection function. For more information on settings for this function, refer to "Other setting details" in the "EXPRESSCLUSTER X SingleServerSafe Configuration Guide".

• System monitor resource

The **System Resource Agent process settings** part of the system monitor resource has been separated to become a new monitor resource. Therefore, the conventional monitor settings of the **System Resource Agent process settings** are no longer valid. To continue the conventional monitoring, configure it by registering a new process resource monitor resource after upgrading EXPRESSCLUSTER. For more information on monitor settings for Process resource monitor resources, refer to "Setting up Process resource monitor resources" - "Monitor resource details" in the "EXPRESSCLUSTER X SingleServerSafe Configuration Guide".

Internal Version 12.30

• Weblogic monitor resource

REST API has been added as a new monitoring method. From this version, REST API is the default value for the monitoring method. At the version upgrade, reconfigure the monitoring method. The default value of the password has been changed. If you use weblogic that is the previous default value, reset the password default value.

7.2.2 Removed Functions

The following describes the functions removed for each of the versions:

The following describes the functions removed for each of the versions:

Internal Version 12.00

- WebManager Mobile
- OfficeScan CL monitor resource
- OfficeScan SV monitor resource
- OracleAS monitor resource

Important:

Upgrading EXPRESSCLUSTER X SingleServerSafe from its old version requires manually updating the cluster configuration data for functions with corresponding actions described in the table below. For information on how to upgrade EXPRESSCLUSTER X SingleServerSafe, see "4.1.1." -> "Updating from the old EXPRESSCLUSTER X SingleServerSafe version". Then, at the timing described in the guide, follow each of the

procedures described in the Action column.

Internal Version 13.00

Function	Action
WebManager/Builder	
BMC linkage	1. Delete relevant message reception monitor resources.
Compatible commands	 Script resources Custom monitor resources Scripts before final action Scripts before and after activation/deactivation Recovery scripts Pre-recovery action scripts Forced-stop scripts Other scripts configured with EX-PRESSCLUSTER If any of these scripts includes a compatible command, modify the script by excluding the command. Example To start or stop services controlled with the armload command, use the sc command instead. To monitor services, use service monitor resources instead.

7.2.3 Removed Parameters

The following tables show the parameters configurable with Cluster WebUI but removed for each of the versions:

Internal Version 12.00

Cluster

Parameters	Default
Cluster Properties	
WebManager Tab	
	Off
Enable WebManager Mobile Connection	
WebManager Mobile Password	
	-
Password for Operation	
	-
Password for Reference	

JVM monitor resource

Parameters	Default
JVM Monitor Resource Properties	
Monitor (special) Tab	
Memory Tab (when Oracle Java is selected for JVM type)	
	2048 MB
 Monitor Virtual Memory Usage 	
Memory Tab (when Oracle Java(usage monitoring) is selected for	
JVM Type)	
	2048 MB
 Monitor Virtual Memory Usage 	

User mode monitor resource

Parameters	Default
User mode Monitor Resource Properties	
Monitor (special) Tab	
Use Heartbeat Interval/Timeout	On

Internal Version 12.10

Cluster

Parameters	Default
Cluster Properties	
WebManager Tab	
WebManager Tuning Properties	
Behavior Tab	
• Max. Number of Alert Records on the Viewer	300
Client Data Update Method	Real Time

Internal Version 13.00

Cluster

Parameters	default values
Server Properties	
Info Tab	
Virtual Machine	Off
· viituai Machine	
	vSphere
• Type	

7.2.4 Changed Default Values

The following tables show the parameters which are configurable with Cluster WebUI but whose defaults have been changed for each of the versions:

- To continue using a "Default value before update" after the upgrade, change the corresponding "Default value after update" to the desired one.
- Any setting other than a "Default value before update" is inherited to the upgraded version and therefore does not need to be restored.

Internal Version 12.00

Cluster

Parameters	Default value before update	Default value after update	Remarks
Cluster Properties			
JVM monitor Tab			
• Maximum Java Heap Size	7 MB	16 MB	

Application monitor resource

Parameters	Default value before update	Default value after update	Remarks
Application Monitor Resource Properties			
Monitor (common) Tab			
• Wait Time to Start Monitor- ing	0 sec	3 sec	
Do Not Retry at Timeout Oc- currence	Off	On	
Do not Execute Recovery Ac- tion at Timeout Occurrence	Off	On	

NIC Link Up/Down monitor resource

Parameters	Default value before update	Default value after update	Remarks
NIC Link Up/Down Monitor Re- source Properties			
Monitor (common) Tab			
• Timeout	60 sec	180 sec	
Do Not Retry at Timeout Oc- currence	Off	On	
Do not Execute Recovery Ac- tion at Timeout Occurrence	Off	On	

Service monitor resource

Parameters	Default value before update	Default value after update	Remarks
Service Monitor Resource Prop-			
erties			
Monitor (common) Tab			
	0 sec	3 sec	
• Wait Time to Start Monitor-			
ing			

Continued on next page

Parameters		Default value	Default value	Remarks
		before update	after update	
• Do Not Re currence	etry at Timeout Oc-	Off	On	
• Do not Exe tion at Tim	ecute Recovery Ac- neout Occurrence	Off	On

%x: Error code		

Licensing

Behavior and Message	Cause	Solution
When the cluster was shut down and rebooted after distribution of the configuration data created by the Cluster WebUI to the server, the following message was displayed on the alert log, and the cluster stopped. "The license is not registered. (Product name:%1)" %1:Product name	The cluster has been shut down and rebooted without its license being registered.	Register the license from the server.
When the cluster was shut down and rebooted after distribution of the configuration data created by the Cluster WebUI to the server, the following message appeared on the alert log, but the cluster is working properly. "The number of licenses is insufficient. The number of insufficient licenses is %1. (Product name:%2)" %1: The number of licenses in short of supply %2: Product name	Licenses are insufficient.	Obtain a license and register it.
While the cluster was operated on the trial license, the following message is displayed and the cluster stopped. "The trial license has expired in %1. (Product name:%2)" %1: Trial end date %2: Product name	The license has already expired.	Ask your sales agent for extension of the trial version license, or obtain and register the product version license.
While the cluster was operated on the fixed term license, the following message appeared. "The fixed term license has expired in %1. (Product name:%2) " %1: Fixed term end date %2: Product name	The license has already expired.	Obtain the license for the product version from the vendor, and then register the license.
