Adjusting the image You can adjust the image on the screen by focusing, zooming, and rotating the picture. Each of these is accomplished by the dial just below and to the right of the screen NOTE Towards the end of most microfilms, the advance function will stop working. The only option for advancing the microfilm further is to do it manually. PLEASE DO NOT FORCE THE DIAL!!! It wont work. And if it is broken we will be most unhappy. So, to zoom in or out on, rotate, or focus the picture on the screen, simply press the appropriate button and move the dial until the screen is displaying correctly. You can also use the brightness controls to lighten or darken the scanned image as you would on a standard photocopier Microfiche Simply slide the microfiche plate until you find the section you wish to read. You may need to zoom in. NOTE this does not affect the brightness of the screen only the scanned image is affected. Saving You can save your image to the computers hard drive in JPEG, JBIG and Bitmap formats. We strongly encourage all patrons to remove their saved images to a flash drive, CD or other medium AS SOON AS POSSIBLE. We will periodically clear the hard drive of all saved data. You can print your image to the adjacent photocopier. This ensures that the entire image will be printed. 4 The image will appear on the screen. This is recommended, as TIFF files can be very large, and most image viewers will display only the first scanned page. Simply rightclick on the file and select Convert to Adobe PDF. 2 Supply a name for the file and choose the file format. Select Cancel to stop scanning. Advance the film to the next page and click OK, repeating until you have scanned everything you wish to scan. Once you have finished, click Cancel until you have exited back to the main window. 7 Save your PDF from the file menu. 5 You will probably get a message that says No film in scanner. Add film medium to camera and continue. We don t know why.

Just click OK, That way if you need to make adjustments you can do so without needing to rescan many pages. If you wish, check the image settings before starting the scan. Generally these settings produce consistently accurate results The page sizes available are 11 x 17 Ledger 8.5 x 14 Legal 8.5 x 11 Letterlandscape 11 x 8.5 Letterportrait 5.5 x 8.5 Statement LTRR 11 x 8.5 Use the button underneath to select the size desired. NOTE The sizes are approximate. Generally they end up being slightly larger than pictured. STMT 5.5 x 8.5 LGL 8.5 x 14 LTR 8.5 x 11 11 x 17 We do know, however, that pressing the control button until none of the options are selected gives you the greatest flexibility. This is what we recommend doing. The controls on the right determine whether the scanner uses the middle line or the left edge line as the starting point. Note, that the scanner will only make one pass, so the second time it will not do anything. If you select the automatic option, the machine will make a calculation to determine which choice is best. We have found that it often makes the wrong choice, so we recommend telling it what to do yourself. Changing the lens The microfilm reader normally uses a lens with a zoom of from 14X to 30X. This is sufficient for most

purposes. Some very large documents, however, may require a lowerpowered lens in order to fit an entire page in one scan. The library keeps a 7X7.5X lens behind the circulation desk, which may be checked out as a reserve item for two hours at a time. The lens the black part will simply lift out. Please treat the lens with the care and respect due to a delicate and expensive scientific instrument. Changing the lens is simple. It sits in a gray plastic lens carriage, helpfully labeled LENS CARRIAGE PULL HERE TO REMOVE. Pull the carriage out gently but firmly.

Insert the new lens so that the two small metal posts at the back of the carriage The lens should fit snugly into the carriage; you may need to rotate the lens slightly until it drops into place. Correct Incorrect Slide the carriage back into position and push gently until it locks into place. Please respect the intellectual property rights of the authors.
