After the soldering system has cooled down again, the warning light goes out and work can be resumed. The DECASTAR 180 E is suitable for semiprofessional use and can be connected to the domestic electricity grid. Our watchwords are savings and convenience, we get the best prices on the market. We will take care of you thanks to highly competent employees who are constantly involved in assistance and repairs. Jeg er ikke videre imporeret af den. Skal siges jeg er ikke en orn til at svejse, men den var defekt fra starten en jeg har lant af en tidligere mekaniker som har svejset lidt med den, sa jeg skulle skille den ad for at skifte en sikring til noget lavvoltagekredslob. Malheureusement le site de Decaweld noffre pas les PDF des manuels utilisateurs ou alors je nai pas trouve les fabricants U.S. sont eux souvent beaucoup plus ouverts et permettent le telechargement des User Manuals et parfois meme des Service Manuals. Decastar 180E Compact Wire Feed Welder MIGMAG 160 Amp. Create one here. Creators are allowed to post content they produce to the platform, so long as they comply with our policies. United Kingdom. Company number 10637289. This is where welders get share ideas and get inspired. To start viewing messages, Princessa auto is very good about no questions ask returns. Is the 150 a 120V machine or 240. If it is 120 then there is no comparison, the HH175 is clearly the winner. Also it comes with a 5 year warrenty that princess

auto will honor. I had a catalog at one time A 185 Clarke or whatever size they are cheaper if you want to stay on the bottom and there are lots of dealers. <http://belniig.by/public/hyundai-i10-repair-manual.xml>

Auto parts stores carry them. I would trade up to a HH175 if Princess would do it for a couple reasons,, a big one being there are thousands of dealers for consumables and or parts. Plus its going to weld considerably better. Every welding supply will have tips, a liner, etc. It wont be a big dust collector the first problem that occurs and likely wont have a problem for a long time. There was a thread earlier about the same thing regarding Sears electric power tools. The price difference from the cheap to the really good isnt so vast that it makes the good one a much better investment. What are the specs. It mentioned something about metering, not exactly sure what they ment, but I had assumed that the meter they are talking about is for the gas. The owners manual sitting on top of the box was pretty sketchy. You need adobe flash player to watch this video. Apr 1, 1999 10 multiplier. Standards. Longitude 0 e or w from. Mbf. Multiple beam. I will put some pics up and check all connections but would like some advice on where to start. Thanks MurrayDid you replace it with one of the same value. Post some pics and maybe someone will recognize it as a different brand.I will check all of this what I pull it a apart and take some pics. I would like to test the motor that drives the wire also what sort of voltages are working inside the box. I am good with restoring bikes and engines and making wiring looms but electronic things are a bit out of knowledge base.Today I feed the wire through from the spool manually until it was protruding from the end of the welding tip. When the welder is switched on at the power and the trigger is pressed I can a noise like a thinking I would get some sparks if I contacted the wire with metal. But nothing not sure where to start to track down the problem. Any help appreciated. I will also look at some of the other threads.When the welder is switched on at the power and the trigger is pressed I can a noise like a thinking I would get some sparks if I contacted the wire with metal. But nothing not sure where to start to track down the problem. Click to expand.

<https://www.indianantique.com/images/compruebe-el-bloqueo-safe-manual.pdf>

But the wire feed motor has maybe a volt or 2 running to it when I pull the trigger. Now I am going to try the car battery charger with 12 volts see if the motor will do anything. Will see how this goes and get back.The rectifier module should have about 21v AC going in and about 30v DC coming out. RobertChecking the voltage from the welding wire starts at 40 v and steps down at the other welding settings. Also the wire feed motor works when using a car battery charger as a source if power. The leaves the ICB being the problem. Will put some pics on later todayThis is the same type circuit. It looks like if you unhook one end of the R4 resistor, it should make the motor run at full speed if the SCR TH1 is good. RobertI only had a look at DZ1 and it looks ok I dont know what a zener is either. Next should I unhook R4 will I cut it or try to remove one pin from the board with a soldering iron of course. Is there other checks I can do to trace the problem but will need simple instructions. You might check the zener DZ1, a shorted zener would kill the wire feed. This is the same type circuit. It looks like if you unhook one end of the R4 resistor, it should make the motor run at full speed if the SCR TH1 is good. RobertSo where to now but before that I have another question.Ive repaired a few with that problem.I was using my welder today and all was working fine, put the gun down after a weld and then when I went to use it again I had no wire feed. The motor is working fine, touched the points to make sure it was not the trigger. Help pleaseTurns out I had a few problems with it.They discovered that the power output transistor was blown, but that still didnt fix the problem, they then discovered that the solder join on one end of the big white resistor was broken away from the board so they fixed that and now it runs better than it has for years. I hope this helps someone else with their welder.

Cheers ChrisI havent replaced anything on mine as yet and dont know why its stopped all of a sudden. The motor still works on a 12v battery but dont know why its not working in the welder. Now I have read through this forum but have no idea what you are on about. Can someone help me out in simple English please.I havent replaced anything on mine as yet and dont know why its stopped all of a sudden.
