But often its a tough job to find versions for them, especially for vendors like DFI, EPoX and so on. For EPoX I couldnt find a good source at all. And maybe hwbot can host them He sent me this link. Unfortunately none of the sources behind the link worked but due to his hint I knew what to look for. Now I have about 10 biosversions for this board and lots of other DFIboards are supported. But only AMDbased ones. So still looking for bios for Intelbased DFIboards. But its a good start. I can save any bios I have on my boards. The files are out there, you just have to find them. I use them as draw to my own site. You can always message me if youre looking for a particular bios. Chances are I have it.

Sad if this is true but I will go thru my old drives im unorganized. as i found a old mobo site that had pentium bioss and other such bios. Moved them to a private server long ago, accessible only on my say so. I saw only the information my eyes wanted to see. Thanks again for the hint! The last 5 are not in my collection. Moved them to a private server long ago, accessible only on my say so. I dont actually need the newest version, just to know if any newer version supports an 8.5 multiplier because my CPU is limited by the multiplier there is no way to change it to a.5 The board is a Lanparty DK P35T2 it is identical to the DK p35T2RS except that it uses an ICH9 PCH instead of the ICH9R, is missing 2 sata ports and may be missing a few odds and ends here and there. FIY, there is no actual picture i could find for the DK P35T2. All discontinued listings for it have the DK P35T2RS picture. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. This remains the case for the DK P45T2RS PLUS, which at times have rather too many options in our opinion. Therefore, it can be overwhelming for less experienced users, but fortunately, DFI realizes this and has two modes for the BIOS, Easy and Advanced, with the Advanced mode showing the full set of BIOS options that only overclockers are inclined to tweak. As mentioned earlier, enthusiasts should have a field day going through the many settings available on this board and the handy POST LED and reset CMOS button were very useful. Our quadcore processor however only managed 465MHz for the FSB, which was similar to what we had managed for previous P45 boards, though this figure was quite far from the overlocks done and posted online by others who use dualcore processors. How stable those clocks are is a different question altogether, but from our testing on our quadcore processor, 465MHz was the most stable we achieved and is inline with typical boards of this class.

Hence, for our testing, we had two mostly similar test configurations, differing only in the memory. We could only get our DDR21066 memory to run properly at DDR2800 for the lack of proper memory ratios so that was what we tested the DFI at. The following hardware configurations were used You can reach out to them here. Check out our fibre broadband plan guide brought to you by MyRepublic. The actual Open Box product may differ in packaging and included accessories, but has been tested to ensure basic functionality. Based on Intels P45 Express and ICH10R chipsets, this ATX board is ready to host the latest LGA775 Core2 quadcore processors along with Core 2 Duo, Pentium D and Celeron CPUs. A

pair of PCIExpress 2.0 x16 cards can be mounted for cuttingedge graphic power with support for CrossFireX. Integrated Gigabit Ethernet LAN allows bottleneckfree connections to other network devices at broadband speeds and a halfdozen USB 2.0 ports allows for nearly unlimited possibilities in connecting peripheral devices. Gigabit LAN is ideal for supercharged seamless streaming of Internet audio and video content. It runs very cool; my Q9550 idles at under 30C after market cooling of course, which is much cooler than my older MoBo. It is great for enthusiasts, if you know what i mean.; Running dual 5850s in crossfire and could not be happier with gameplay and temps; my setup owns Crysis Warhead maxed, with the highest AA, and runs very cool. This board is also laid out pretty nice, too.

With two Radeon 5850s the only thing that is in the way is the boot code LED. With a second graphics card it is covered, but when trouble shooting it is good to take additional cards out anyway. One other thing I love is the CMOS jumper on the IO cluster. This is accessible from the rear with no need to open up the case. Nothing new to a seasoned system builder, though. For a first time system builder, this board will do quite nicely as well. Just be sure to read the documentation to avoid any headaches during the install. It offers numerous BIOS settings, and also has an inexperienced mode, where advanced BIOS settings are hidden, but can be enabled at anytime. If you are looking for performance, good temps, and options in a socket 775 MoBo this is a good board. I like it a lot better than comparable models around the same price. Oh. it looks darn cool, as well. Absolutely, no hassles with the install, so I gave it 5 stars. It changes along with the boot sequence, the manual describes each step in the process. It was the major factor in me choosing this over similar options. These sticks work great together in every other system Ive tried, but no this one. Ive tried manually setting the timing and lowering the voltage to try to get them to work with each other. Im not sure if this is the case with other motherboards, but if this wasnt the case, I would return this for a better board. I tried each pair of memory individually; each worked wonderfully. However, any combination of the two models would cause a boot halt including one of each and two of each. I wouldnt have purchased this board if I knew it wouldnt support 4x2GB of DDR2. Which is why I gave this one star. My 44412 timing RAM will not even allow this board to POST. You will have a DEAD PC if you have fast RAM. Decent manual. Lots of options including overclocking. It came with orange cables to match the MB colors. 6 SATA connectors! I initially had trouble getting the MB to boot properly.

I discovered the bios reset jumper was not making a good connection. jumper has to be on for normal boot After I replaced the jumper, it worked perfectly. But I bought it to build a Hakintosh using the efis module. Works wonderfully! No matter how many copies there are, they still have the problems of the original, they soon look disturbing and the person who made it is hard to get a hold of. So i returned for an exchange because you cant return for credit or refund hint that they may know their product sucks so they shipped me another, same problem as first and i know its not my equipment because everything works perfectly still with my old MoBo. Will not be buying another motherboard from DFI again ever. Ill probably never run it in Crossfire mode but its nice to know I could if I wanted to. Once I got the kinks ironed out with my CPU cooler, and figured out DFI's support web site and the BIOS I OCed my E8500 to 3.6Ghz. I was stable at 4Ghz as well but was not comfortable with my CPU and Northbridge temps. The DFI BIOS is almost laughably complex to navigate. Spend some quality time with Google and on the strange DFI web site and youll be OK. BIOS upgrade procedure is a joke. Since Im running Vista 64bit I had to upgrade by booting off a USB stick. What the Dont tighten it down 100%. When I tightened it down all the way the fan must have bent the northbridge cooler and I couldnt boot. Once installed, though, it works great with this board. Im running at 25C no load, 35C gaming load and 54C under Prime95. Worth every penny. Click here for more details. Secure shopping made faster. Check out with PayPal. To start viewing messages, this thread isn't final. If you want to buy the DFI, then buy the plus version. Most of the overclocking results are reached on the plus version. F9 for more memory settings in bios. Zum DFI DK Plus Difference between the normal and the plus is the additional 2 SATA ports and also the double boot after saving bios has been resolved for the P45 plus. I made it with 20 kOhm VR. I think 10 kOhm should be work too. I couldn't reach more than FSB 400Mhz. The maximum was 430Mhz, but it wasn't stable.

500Mhz is impossible. Do you have some same experiences? I think you're one of the first, so be patient. And for sure it's the first release of the BIOS CPU E8400 or 8200, same results. I think you're one of the first, so be patient. And for sure it's the first release of the BIOS. Waiting for some other people! Waiting for some other people! No removable bios chip though. And I hope for a new bios! So, let's hope there will be UT DDR2 ver. JR look like this I hope a new bios will fix all these problems! If not, I will sell this board. PS Bios screens added! This must be an alpha beta whatever early bios. Also, I thought this board was scheduled for middle July. I really hope they release a new bios fast. So a mail to Taiwan is out. I dearly hope it doesn't have the same issues as yours, but more unlikely I think it will. So, let's hope there will be UT DDR2 ver. JR look like this I think this mobo isn't officially launched yet. Here in Romania you can find it listed, but they don't have it in stock, so it looks like I'll have to wait a bit more. Hope by the time it gets here, dfi engineers will fix the damn bios. Any comments on the package, build quality, northbridge cooler? I will take some photos of the package soon. DK P45T2RS is born to break the record. Is it hard too reach the top in OC world. With DFI ABS technology, you can easily tweak your PC with only 2 steps. Today we will take a look at one of their coolers — cuplex kryos Next. The first version of this water cooler launched in 2010. The new block is based on its old version but there is a number of differences, which I'm going to talk about at the moment. Those who have ever worked with this device surely admired its plain urban

design and high quality. It is not the most fashionable model, nor the cheapest one, but for this price you get the quality of the experience and workmanship, which will not disappoint you in some years. Packaging and contents You get your cuplex kyos NEXT in a compact box with the minimum information on it. Hereby, the customers are able to choose the model that suits their technical and design requirements the most. Chassis VS92 is elaborated in midtower formfactor and features 455x200x460 mm dimensions. Both variations, Mesh and Window Editions, are thought to support motherboards of ATX and microATX standard. Their internal layout is able to house seven expansion slots, a standard power supply unit, CPU coolers of not more than 158 mm in height, and highperformance graphics adapters of up to 400 mm in length.
