In all honesty, we have a bit of a lovehate relationship with DFI's motherboards here at bittech. While all of us in the office and some outside have owned and certainly used DFI boards at some point in our lives, they have bounced between sheer grief and stress and elation. Personally, I have a lot of fun since theyre always a learning experience with every new BIOS, however our resident memory expert, Ryan Leng, despises them since they tend to cut the memory support so wafer thin, it gives the poor guy nothing but headaches. The LT X48T2R is no exception, this has to be the only board we've had where you literally have to build it yourself before you use it. The north bridge heatsink, designed by Thermalright, is so tall it simply couldn't fit upright in the box so you have to pop it on personally. We opted for the DDR2based T2R version because, even though the X48 is predominantly designed for DDR3, given the epic depth of BIOS options that leave you feeling like a three year old sitting a University maths exam, it should be the perfect combination. Or is it simply a case of learning the ropes and having lots of fun. The manual is pretty good for the board layout, but avoids and of the software or more importantly the BIOS, absolutely. The LT is designed to be an essentials package and that's what you get. While part of us would want everything for 160, the value has been put into the substantially sized north bridge cooling which is really a genuine value add for everyone.

It's for people who already have a ton of kit spare and since DFI also offer more comprehensive packages from the LANParty UT ranges, we find it hard to fault it on the fact it does what it says on the tin, we just wish for a few tweaks like we mentioned above. Or is it in the same mould with the same limitations. Read on to find out. Lets find out. Ze nase recenze neni zcela prvni na celem Internetu.

Tak se presvedcte sami, prohlednete vsechny obvykle zahranicni stranky. Ze vsech renomovanych internetovych periodik jeste recenzi teto desky neuverejnil nikdo, objevilo se jen nekolik oznamovacich zprav a fotografi. Kompletni test vctne pretaktovani mate moznost si precist prave vy a prave dnes. Na uvod bych jeste zminil fakt, ze zmluku o desce jako o drahoukam jsem myslel smrtelne vazne a nas test vas o tom jiste presvedci. To co jsem na nekolika poslednich deskach DFI pripominkoval, se podarilo vyrobci odstranit a ten prinasi na trh opravdovy skvost. Spolecnost DFI prosla pred nedavnou dobou vyraznou zmenou strategie a profilovani svych produktu. V minulosti byla nabídka firmy dosti neprehledna, a clovek se vetsinou ve slozitych jen nepatrne se lisicich nazvech zakladnich desek, ztracel. Pokud shrnu dosavadni vysledky predeslych desek teto rady LanParty, jednalo se vzdy o opravdu velice nadprumerne desky. Ovsem nikdy nestal vysledek za tak vysokou cenu, za kterou se tyto modely prodavaji. Za mnohem nizsi cenu si dnes muze zakaznik vybrat z mnoha zajimavejsich produktu. Modely s cipsetem AMD RD600 i nVidia nForce 680i SLI nebyly moc uspesne a jejich prodeje take nejsou nijak vysoke. Obsah baleni Krabice novych produktu DFI jsou celkem nenapadne, ale vsechny stejne. Hlavnim odlisenim je pouze barva tisku na krabici v nasem pripade svetle modra. Desky s konkurencni cipovou nVidia sadou jsou svetle zelene. Z predni strany se muzeme skrze okenko podivat na system chlazení, který je vskutku nevidany. Ze zadni strany ma deska jen nekolik zmínek o kvalitach a specialitach konkretniho modelu. Po otevreni krabice najdeme pouze dve dalsi krabicky a pruhlednou krustu s deskou. V pruhlednem obalu je deska samotna, veskere prislusenstvi najdeme v prvni krabicce. Druha obsahuje chladic a dalsi pomucky. Tento zpusob baleni je hoden drahe highendove desky bez vyhrad.

Prislusenstvi je proti minule testovany deskam DFI mnohem bohatsi, a za sve penize jiz dostavame to co si zaslouzime. Ovsem na konkurencni desky Asus vybava teto desky stale nema. Na její obsah

se pojdme podivat dale. V teto druhe krabici je kompletne system pridavneho chladice cipove sady a procesoru. Najdeme zde chladic, heatpipe trubici, teplovodivou pastu, sponky pro uchyceni ventilatoru k pasivu, maly plisek pro uchyceni chladice a sroubky. Samozrejme nechybi manual, jak nasadit chlazení na dve mozna mista na desce. Na tomto obrazku vidime prvni mozne uchyceni chlazení. Pasiv je mozne umistit ve smeru nahoru i dolu. Zalezi na umistení graficke karty která bude tim jak nasava vzduch chladit prave instalovany pasiv. V pripade ze bude tento chladic umisten od graficke karty daleko a nebo ta nasava vzduch odjinud nez zespodu, muzete na tento pasiv umistit 80mm ventilator. Zde vidite detail uchyceni heatpipe trubice na jizni mustek. Jeden konec volne heatpipe se prisroubuje do ctvercove zakladny pasivu, druhy konec vidite prave na obrazku. Ten je uchycen ke kovovemu chladici mustku pomoci plisku a ctyrmi sroubky. Timto resením ochlazujeme zejmena jizni mustek a odlehčíme severnimu, do kterého nepujde tolik tepla skrz heatpipe spojení. Pokud budete chtít ale chladic umistit na druhou pozici, kde budete hlavne chladit procesor a severni mustek, musite nejprve osadit medeny plisek rozvadece tepla procesoru. Do patice vlozíte procesor, a na jeho povrch date pastu. Na nej potom priložite plisek a ten utahnete dvema srouby. Pak do drážky osadíme opet heatpipe chladice a upevníme stejným pliskem a ctyrmi srouby, jak v pripade jizniho cipu. Deska s osazeným chladicem vypada jak vidite na obrazku. Orientace samotného pasivu je samozrejme menitelna, je nutne jej ale osadit az po montazi do pocitacove skrine, coz je ale zrejme. Tento portal medialne zastupuje Impression Media, s.r.o. But often its a tough job to find versions for them, especially for vendors like DFI, EPoX and so on. For EPoX I couldnt find a good source at all. And maybe hwbot can host them He sent me this link. Unfortunately none of the sources behind the link worked but due to his hint I knew what to look for. Now I have about 10 biosversions for this board and lots of other DFIboards are supported. But only AMDbased ones. So still looking for bios for Intelbased DFIboards. But its a good start. I can save any bios I have on my boards. The files are out there, you just have to find them. I use them as draw to my own site. You can always message me if youre looking for a particular bios. Chances are I have it. Sad if this is true but I will go thru my old drives im unorganized. as i found a old mobo site that had pentium bioss and other such bios.Moved them to a private server long ago, accessible only on my say so. I saw only the information my eyes wanted to see. Thanks again for the hint! The last 5 are not in my collection. Moved them to a private server long ago, accessible only on my say so. I dont actually need the newest version, just to know if any newer version supports an 8.5 multiplier because my CPU is limited by the multiplier there is no way to change it to a.5 The board is a Lanparty DK P35T2 it is identical to the DK p35T2RS except that it uses an ICH9 PCH instead of the ICH9R, is missing 2 sata ports and may be missing a few odds and ends here and there. FIY, there is no actual picture i could find for the DK P35T2. All discontinued listings for it have the DK P35T2RS picture. While it has become an expectation for many to see boards from the main players up front and ready to go at product launch, early adopters have naturally expected DFI to be fashionably late to the ball with their own LANParty series offering. So costly that many of the leading players in the once hot AMD S939 sector such as DFI, abit, MSI, Albatron, Chaintech, Shuttle, and EPoX have seen their market shares dwindle sometimes drastically to the point of not being around anymore since the introduction of the Core 2 Duo from Intel and the resulting market switch by the enthusiasts to the blue camp. We thought the RD600 would fill that role last year, but it came up short in performance even though the BIOS options foretold the future about DFIs BIOS designs on Intel product. DFI managed to hit a home run with the Infinity 965S Dark. Unfortunately, everyone had left the P965 ballpark to watch the P35 play in a new stadium by that time. Hopefully, their X38 product will be

released in the coming weeks but until then probably afterwards also based on early numbers, we think most people will be more than satisfied with the UT P35T2R provided you can afford it and do not have a need for multiGPU benchmarking. Beyond color enhancing UV lights to show off the board, the enthusiast knows that beauty in electronics, as with all other things, can often lie only skin deep. Rigorous inhouse testing by DFI to iron out BIOS kinks was chosen over sending out boards at the chipset launch. This was done in an attempt to nail issues before users spent their hard earned dollars for partial functionality. As a matter of fact, anyone who buys motherboards close to official chipset launch dates should be fully versed in the ritual BIOS flashing regimen often required for longterm usefulness. Running a few quick benchmarks featuring high front side bus speeds might grab some early headlines, but it does not indicate a boards actual performance capability or stability.

Put in perspective for the enduser, the two month delay is not such a bad thing, if a more solid and compatible motherboard is the end result. Due to the very extensive BIOS options on this motherboard, assessing a product like this demands extra time. It also forces you to go over the options with greater detail while explaining their use and determining the worth of performance benefits when changing these options. While we are certainly not BIOS engineers, we are hoping that the time we have taken to go beyond the scope of normal motherboard review criteria will be welcomed by our readers, who are often just as confused as we are when we first take a look at a new DFI BIOS. The goal then of this article is to take a focused look at how to properly set up and overclock this latest DFI offering, and even if youre not specifically planning on purchasing this motherboard we hope to provide some insight into what is involved in reaching top overclocks with Intels impressive P35 chipset. In the near future, we will be able to provide direct overclocking performance comparisons and capabilities of this board against additional motherboards in the upperend market sector. In the meantime, our results today are more of a dog and pony show as to what the board is capable of under various overclocking scenarios. We welcome your input, suggestions, and ideas for improving this type of content. For now, lets take a look at DFIs latest board and its general performance results before we hit on the overclocking features. In terms of the screenshots, it is nice to have 1 persons trust, but there are many we have to please and not everyone is always as convinced. The idea is not to tweak forever. I did spend alot of time over the first few weeks, but now that its tweaked, I just use it as is. My whole point is that you are working for diminishing returns that I feel could be better spent using your system. If youre doing it to set a record, fantastic. I support that.

I personally love the BIOS options and CMOS reloaded functionality. That alone makes the extra cost well worth it to me. Also if they had time to test many diff RAM stocks and to tweak the memory settings you would also see the difference. Its a good article, but no reviewer has time to really dig into this mobo and all it has to offer. I do feel the article did a good job at explaining that. I want to open a window so badly.
