INTERCONNECTION DIAGRAMS-1

FURUNO ELECTRIC CO., LTD.
NISHINOMIYA, JAPAN

SAFETY INSTRUCTIONS

WARNING

Do not work inside the equipment unless totally familiar with electrical circuits.

Hazardous voltage which can cause electrical shock, burn or serious injury exists inside the equipment.

Turn off the power at the mains switchboard before beginning the installation. Post a sign near the switch to indicate it should not be turned on while the equipment is being installed.

Fire, electrical shock or serious injury can result if the power is left on or is applied while the equipment is being installed.

CAUTION

Ground the display unit to prevent loss of sensitivity and mutual interference.

Confirm that the power supply voltage is compatible with the voltage rating of the equipment.

Connection to the wrong power supply can cause fire or equipment damage. The voltage rating appears on the label at the rear of the display unit.

Use the correct fuse.

Use of a wrong fuse can cause fire or equipment damage.

Keep the following compass safe distances:

	Standard	Steering
Display unit	0.50 m	0.35 m

This page is intentionally left blank.

3. DISPLAY UNIT

The display unit can be installed with either of four methods as shown below. Refer to the outline drawing at the end of manual.

- Locate the unit away from exhaust pipes and vents.
- The mounting location should be well ventilated.
- Mount the unit where shock and vibration are minimal.
- Keep the display unit away electromagnetic field generating equipment such as motor, generator.
- Allow sufficient maintenance space and a sufficient slack in cables for maintenance and repair.

Table Top and Overhead Mounting

TABLE TOP

OVERHEAD

Display unit mounting methods

Flush mounting type F

An optional flush mount kit type F is required. For details, see outline drawing at end of this manual. (Name: Flush Mount Kit F, Type: OP20-25, Code No.004-393-280)

Name	Type	Code No.	Qty
Self-tapping screw	5X20	000-802-840	4
Hex. bolt	M6X12 SUS304	000-862-127	2
Spring washer	M6 SUS304	000-864-260	2
Cosmetic panel	20-013-1121	100-234-240	1

Flush mounting type S

An optional flush mount kit type S is required. (Name: Flush Mount Kit S, Type: OP20-24, Code No.: 004-393-000)

Name	Type	Code No.	Qty
Wing bolt	M4X30 YBSC2	000-804-799	4
Hex. bolt	M6X12 SUS304	000-862-127	2
Wing nut	M4 YBCS2	000-863-306	4
Spring washer	M6 SUS304	000-864-260	2
Flush mount metal	20-013-1111	100-234-230	2

1. Prepare a cutout in the mounting location whose dimensions are 242 (W) X 152 (H) mm.
2. Insert the unit to the cutout.
3. Attach two flush mount metals to the unit with two hex bolts (M6X12) and two spring washers.
4. Screw four wing bolts to wing nut.
5. Fasten the unit with wing bolts assembled at step 4, and then tighten nuts.

4. ANTENNA UNIT

Mounting

Install the antenna unit referring to the installation diagram at end of manual. When selecting a mounting location for the antenna unit, keep in mind the following points.

- **Select a location out of the radar beam.** The radar beam will obstruct or prevent reception of the GPS satellite signal.
- **Be sure the location offers a clean line-of-sight to satellite.** Objects within line-of-sight to a satellite, for example, a mast or funnel, block reception and cause prolonged acquiring time or interruption of position fix.
- **Mount the unit as high as possible.** Mounting the antenna as high as possible keeps it free of water spray, which can intercept reception of GPS satellite signal, if water spray is frozen.
- **The antenna unit GPA-018S must be grounded.** Connect ground wire of 1.25 sq or larger (local supply) between the antenna unit and a stainless steel screw fastened to the mast.
- **The antenna unit GPA-018S must be taped.** See next page.
- **The antenna unit should be fixed to the mast as below.**

Taping antenna unit GPA-018S

After inserting the whip antenna to the antenna base of GPA-018S, tape the antenna base and whip antenna with self-vulcanizing tape and vinyl tape to reinforce the whip antenna.

1. Wrap the antenna junction point with butyl rubber tape No.15 (NITTO SINKO COOP.) or the equivalent.

How to wrap

- 1) Pull the tape to be about two times in length and wind it up, overlapping by 1/2 the width of the tape.
- 2) Wrap from bottom to top, i.e., from right to left as in the picture below.

- 3) Wrap the tape from the base to a point about 60 mm, and then back to the base. Keep tension on edge of tape, using finger to hold tape. Then, squeeze edges of tape with thumb and index finger.

2. Completely cover the butyl rubber tape with white vinyl tape, wrapping from the base to the last wind of butyl rubber tape and then back to the base.

How to wrap

- 1) Being careful not to pull the tape too tightly, wind tape, overlapping by approx. 1/3 of tape width.
- 2) Squeeze edges of tape with thumb and index finger.

Extending Antenna Cable Length

The standard cable is 15m long. 30m and 50m long extension cable sets are optionally available.

◆ Extension cable line-up

Fabricate the end of antenna cable and attach the coaxial connector. Details are shown on next page.

Extension Cable Line-up

◆ Waterproofing the connector

Wrap connector with vulcanizing tape and then vinyl tape. Bind the tape end with cable-tie.

How to waterproof the connector of the antenna cable

How to attach the N-P-8DFB connector

Remove outer sheath and armor by the dimensions shown left.

Expose inner sheath and shield by the dimensions shown left.

Cut off insulator and core by 10mm.

Twist shield end.

Clip on clamp nut, gasket and clamp as shown left.

Fold back shield over clamp and trim.

Cut aluminum foil at four places, 90° from one another.

Fold back aluminum foil onto shield and trim.

Expose the insulator by 1mm.

Expose the core by 5mm.

Slip the pin onto the conductor. Solder them together through the hole on the pin.

Insert the pin into the shell. Screw the clamp nut into the shell.

(Tighten by turning the clamp nut. Do not tighten by turning the shell.)

Grounding

The display unit contains several CPUs. While they are operating, they radiate noise, which can interfere with other radio equipment. Ground the unit as follows to prevent it.

- The grounding wire should be 1.25sq or larger.
- The grounding wire should be as short as possible.

External Equipment

The DATA1, DATA2, and DATA3 ports are used to connect an external equipment such as autopilot, remote display, navigation equipment. Refer to the interconnection diagram on page S-1 for connection of DATA1, DATA2 and DATA 3 port. The DATA4 port is used to connect NMEA equipment, PC or DGPS beacon receiver as follows;

Connection of DATA4 port

NOTE: The selection of input/output signal level is done by menu operation. See page 19.

6. INITIAL SETTINGS

Checking Operation

1. Turn on the GP-150.
2. Confirm that "OK" and "BEACON RCVR INSTALLED" are displayed on the self-test display.

Self-test display at equipment start up

3. Press **MENU ESC, 8 and 1**. Confirm that "OK" are displayed for PROGRAM MEMORY, SRAM, Internal Battery, GPS and BEACON.

DGPS Setup

The default setting is "manual".

Automatic DGPS setup

GP-150 can automatically select optimum reference station. If it takes more than five (5) minutes to fix DGPS position at the automatic mode, switch to manual mode. Use the manual mode when an external beacon receiver has no automatic function of station selection.

1. Press **MENU ESC, 9 and 7** to display the WAAS/DGPS SETUP menu.

DGPS SETUP menu

2. Press ▲ or ▼ to select MODE and press ◀ to select INT BEACON.
3. Press ▲ or ▼ to select DGPS Station.
4. Press ◀ to select Auto.

5. Press the **NU/CU ENT** key.
6. Press the **MENU ESC** key.

Manual DGPS setup

Enter frequency and baud rate of station.

1. Press **MENU ESC**, **9** and **7** to display the WAAS/DGPS SETUP menu.
2. Press **▲** or **▼** to select MODE and press **◀** to select INT BEACON.
3. Press **▲** or **▼** to select Ref. Station.
4. Press **▶** to select Man.
5. Press **▼** to select Freq.
6. Enter frequency in four digits (283.5 kHz to 325.0 kHz).
7. Press the **NU/CU ENT** key. "Baud Rate" appears in reverse video.
8. Press **◀** or **▶** to select baud rate; 25, 50, 100 or 200 bps.
9. Press the **MENU ESC** key.

DGPS Operation checking

1. Press **MENU ESC** and **7**.
2. Press **↻** several times to display the following.

Signal to noise ratio

This value is between 1 to 22. The higher the value, the better the reception of beacon signal. When this value is less than 20, the error is included in the correction data. In this time, position fixing is done by using past position data. When the ship is in the service area of a beacon station, this value should be 21 or 22. If not, check as follows.

- Check the grounding.
- Check the radar beam interference.
- Check the noise of power generator of the ship.

This value is between 1 and 84.
The higher the value, the stronger the signal.
If a noise appears at reception bandwidth,
the value becomes bigger.

*It is necessary that GPS is working properly.
When GPS is malfunctioning though DGPS is normal,
the message "No Good" may be shown.

Input/Output Setting

The GP-150 can output navigation information to external equipment. For example, it can output position data to a radar or echo sounder for display on their display screen. You can convert a Loran Plotter to a GPS Plotter with position data from the GP-150.

Before selecting data to output, confirm what data the external equipment requires. Output necessary data only. Outputting unnecessary data can cause receiving problems at the external equipment.

Talker

All data transmitted by marine electronics equipment is prefixed with a two-character code which tells external equipment what equipment is transmitting data. This two-character code is called the talker. The GP-150 contains the talkers GP, LC and DE.

Because GPS is a relatively new system some early model equipments do not recognize the GP talker name. In this case transmit data using a conventional talker, which equipment recognizes, such as Loran C.

Data format and data output availability

Output data sentence of IEC 61162-1 and NMEA 0183 Ver. 1.5/2.0.

AAM:	Waypoint arrival alarm
APB:	Autopilot sentence B magnitude of cross track error, direction to steer, arrival alarm, bearing to waypoint ("Heading to steer to destination waypoint data" not used)
BOD:	Bearing-origin to destination
BWC:	Bearing and distance to waypoint-great circle
BWR:	Bearing and distance to waypoint-rhumb line
BWW:	Bearing-waypoint to waypoint
DTM:	Datum reference
GGA:	Global positioning system (GPS) fix data time of fix, latitude, longitude, quality indicator, number of satellites in use, DOP, altitude, geoidal separation ("age of dgps data" and "differential reference station ID" not used)
GLL:	Geographic position-latitude/longitude
GNS:	GNSS fix data
GBS:	GPS satellite fault detection
RMB:	Recommended minimum navigation information cross track error, direction to steer, origin and destination waypoint ID, destination waypoint latitude and longitude, range and bearing of destination waypoint, destination closing velocity, arrival alarm
RMC:	Recommended minimum specific GPS/TRANSIT data UTC of position fix, latitude and longitude, ground speed and course, date, magnetic variation
RTE:	Routes
VDR:	Set and drift
VTG:	Course over ground and ground speed
WCV:	Waypoint closure velocity
WPL:	Waypoint location
XTE:	Cross-track error, measured
ZDA:	Time and date
Rnn:	Routes

Also, following NMEA 0183 Ver. 1.5 sentence is output.

APA:	Autopilot sentence "A" magnitude of cross track error, direction to steer, arrival alarm, bearing origin to destination.
------	--

Note: BWC, BWR, GGA, GLL, RMB, RMC or WPL is required to output DTM.

6. INITIAL SETTINGS

Input data sentence of NMEA 0183 Ver. 1.5/2.0

Checksum is checked if attached, and if any errors are found, the sentence becomes invalid.

Talker ID is not distinguished.

DBT: Depth below transducer

DPT: Depth

HDG: Heading, deviation and variation

HDM: Heading, magnetic

HDT: Heading, true

MTW: Water temperature

TLL: Target latitude and longitude

VBW: Dual ground/water speed

VHW: Water speed and heading.

FURUNO proprietary sentence

AGFPA: Autopilot information from FURUNO autopilot equipments.

AGFPA: Autopilot information from FURUNO autopilot equipments

Port	Input	Output
DATA1 DATA2	<u>NMEA 0183</u> <u>Ver. 1.5 /2.0</u> AGFPA , DBT, DPT, HDG, HDM, HDT, MTW, TLL, VBW, VHW	<u>IEC 61162-1/NMEA 0183 Ver.1.5/</u> <u>Ver.2.0</u> AAM, APA, APB, BOD, BWC, BWR, BWW, GGA, GLL, GNS, RMB, RMC, VDR, VTG, WCV, WPL, XTE, ZDA, GBS, Rnn, RTE, DTM
DATA3	External MOB	LOG PULSE Same as the data output form "DATA1"
DATA4	DGPS or general data (Selected by menu)	General data <u>IEC 61162-1/NMEA 0183 Ver.1.5/</u> <u>Ver.2.0</u> AAM, APA, APB, BOD, BWC, BWR, BWW, GGA, GLL, GNS, RMB, RMC, VDR, VTG, WCV, WPL, XTE, ZDA, GBS, Rnn, RTE

Note: BWC, BWR, GGA, GLL, RMB, RMC or WPL is required to output DTM.

General data

- 1) Input of waypoint data
Connect YEOMAN equipment to DATA4 port.
- 2) Input and output of waypoint / route data

TX Rate of operation

The TX rate of operation is the percentage of data output in one second, and it appears on the screen. Refer to page 18. If short intervals are assigned to many sentences, the rate of operation increases as illustrated below

Note 1: When outputting data without rest intervals between data, TX rate of operation is 100%. In this case, wrong data may be shown on the receiver because it cannot recognize intervals between data. Thus, do not output unnecessary data or set TX interval to large value so that TX rate of operation becomes small.

Note 2: When the external equipment cannot display correct data input from the GP-150, the rate of operation should be lowered. For example, set a rate of operation less than 60 % for the Temperature Indicator TI-20.

6. INITIAL SETTINGS

DATA 1 output setting

1) Press **MENU ESC, 9** and **3**. The DATA 1, 3 OUTPUT SETUP menu appears.

DATA 1, 3 OUTPUT SETUP			
Data Fmt.	V1.5	V2.0	IEC
Talker ID	GP	LC	DE
Output Data	(00-90 sec)	100%	← TX rate of operation
1.	AAM:00	APA:00	APB:04 BOD:00
2.	BWC:00	BWW:00	GGA:00 GLL:01
3.	RMB:01	RMC:00	VTG:01 WCV:00
4.	VDR:00	WPL:00	XTE:00 ZDA:01
5.	GNS:00	GBS:01	Rnn:00 RTE:00
DATA3. Log Pulse	200ppm	400ppm	
ENT : Enter MENU : Escape			

This line appears only when LOG is selected by internal jumper blocks.

Settings shown above are default settings.

DATA 1, 3 OUTPUT SETUP menu

- 2) Press **▲** or **▼** to select Data Fmt.
- 3) Press **◀** or **▶** to select V1.5, V2.0 or IEC.
- 4) Press the **NU/CU ENT** key. Talker ID appears in reverse video.
- 5) Press **◀** or **▶** to select GP, LC or DE.
- 6) Press the **NU/CU ENT** key.
- 7) Enter Tx interval for each output data sentence in line 1. Tx interval is available in 00, 01, 02, 03, 04, 05, 06, 10, 15, 20, 30, 60, and 90 sec.
- 8) Press the **NU/CU ENT** key.
- 9) Enter Tx interval for each output data sentence in lines 2 through 5. Press the **NU/CU ENT** key after setting each line.

In great circle navigation, BWC and WNC are output but BWR and WNR are not. In rhumb line navigation, BWR and WNR are output but BWC and WNC are not. The total data output are shown by percentage on the third line.

DATA 2 output setting

1) Press **NU/CU MENU**, **9** and **4**. The DATA 2 OUTPUT SETUP menu appears.

DATA2 OUTPUT SETUP			
Data Fmt.	V1.5	V2.0	IEC
Talker ID	GP	LC	DE
Output Data	(00-90 sec)	100%	
1.	AAM:00	APA:00	APB:04 BOD:00
2.	BWR:00	BWW:00	GGA:00 GLL:01
3.	RMB:01	RMC:00	VTG:01 WCV:00
4.	VDR:00	WPL:00	XTE:00 ZDA:01
5.	GNS:00	GBS:01	Rnn:00 RTE:00
▲▼◀▶ : Select ENT : Enter MENU : Escape			

Setting shown here are default settings.

DATA 2 OUTPUT SETUP menu

2) Follow the procedure for setting DATA 1 output.

DATA 3 output setting

The DATA 3 can output NMEA 0183 (V1.5/V2.0) /IEC 61162-1 data or log pulse by selecting inner jumper blocks. For NMEA 0183 (V1.5/V2.0) /IEC 61162-1, the same signal of DATA 1 is output from DATA 3.

Selection of NMEA0183 or log pulse

Output data NP board	NMEA 0183 (V1.5/ V2.0)/IEC 61162-1 (default setting)	Log pulse
JP3	#1-2	#2-3
JP4	#1-2	#2-3
JP10	#1-2	#2-3

Rate of log pulse output

150 mA Max.
50 VDC

Procedure for setting of log pulse rate

- 1) Press **MENU ESC**, **9** and **3**.
- 2) Press **▲** or **▼** to select "DATA 3. Log Pulse".
- 3) Press **◀** or **▶** to select log pulse for external equipment; 200 ppm or 400 ppm.
- 4) Press the **NU/CU ENT** key.
- 5) Press the **MENU ESC** key.

Setting DATA 4 to Data Output

- 1) Press **MENU ESC**, **9** and **5**. The DATA 4 I/O SETUP menu appears.

DATA 4 I/O SETUP		1/2
DATA 4. Level	RS232C	RS422
Data	Out	Com.
To Next Page		DGPS
▲▼◀▶ : Select ENT : Enter MENU : Escape		

Appears only when external DGPS receiver is used.

DATA 4 I/O SETUP menu

- 2) Press ▲ or ▼ to select DATA4. Level.
 3) Press ◀ or ▶ to select level of external equipment; RS232C or RS422.
 4) Press the **NU/CU ENT** key.
 5) Press ◀ or ▶ to select Out.
 6) Press ▼ to select to Next Page. The DATA 4 I/O SETUP <out> menu appears.

- 7) Press **▲** or **▼** to select Baud Rate.
- 8) Press **◀** or **▶** to select baud rate; 4800bps, 9600bps or 19200bps.
- 9) Press the **NU/CU ENT** key.
- 10) Press **◀** or **▶** to select WPT/RTE.
- 11) Press **▼** to select Command. Stop, on the same line as Command, appears in reverse video.
- 12) Press **▶** to select Start. The message shown in figure below appears.

Loading erases current data
and stops Route navigation
Are you sure to load?
ENT: Yes MENU: No

- 13) Press the **NU/CU ENT** key. The message shown in below appears while data is being loaded.

Now loading
Waypoint/Route data !

MENU: Stop

6. INITIAL SETTINGS

14) Output data from the computer. When loading data is completed, the cursor shifts to Stop.

15) Press the **MENU ESC** key.

Setting DATA 4 to DGPS

An external DGPS receiver can be connected to the DATA 4 port.

Follow the procedure below to setup the GP-150 according to the specifications of the DGPS receiver.

- 1) Press **MENU ESC**, **9** and **5**.
- 2) Press **▲** or **▼** to select Level.
- 3) Press **◀** or **▶** to select level; RS232C or RS422.
- 4) Press the **NU/CU ENT** key.
- 5) Press **◀** or **▶** to select DGPS.
- 6) Press **▼** to select To Next Page.

DATA 4 I/O SETUP <DGPS> menu

- 7) Press **▲** or **▼** to select First Bit.
- 8) Press **◀** or **▶** select first bit; MSB or LSB.
- 9) Press **▼** to select Parity.
- 10) Press **◀** or **▶** to select parity bit; EVEN, ODD or NONE.
- 11) Press **▼** to select Stop Bit.
- 12) Press **◀** or **▶** to select stop bit; 1 or 2.
- 13) Press **▼** to select Baud Rate.
- 14) Press **◀** or **▶** to select baud rate; 4800 or 9600.
- 15) Press the **NU/CU ENT** key.
- 16) Press the **MENU ESC** key.

7. OPTIONAL DGPS

Beacon Receiver Set GR-80

* This connection is required for L/L Auto mode of GR-80.

When the GP-150 is connected with Beacon Receiver GR-80, do the setting as follows.

Signal level	RS-422 *1
First Bit	LSB
Parity	NONE
Stop Bit	1
Baud Rate	4800 or 9600 *1

*1: Coincide with the setting of the Beacon Receiver GR-80.

Refer to page 22 for DGPS setup.

取付位置
MOUNTING LOCATION

取付位置

他の機器のアンテナから下の図の距離以上離す。

THIS FIGURE SHOWS THE SEPARATION DISTANCES FROM OTHER ANTENNAS TO AVOID MUTUAL INTERFERENCE.

*：支柱の太さにより変わる。

*: DISTANCE DEPENDS ON MAST DIAMETER OF 'a'.

Qの直径 DIA. OF 'Q'	確保する距離 DISTANCE (MIN.)
10 cm	1.5 m
30 cm	3 m

B) スタンションやパルピットにつけるとき

レール用アンテナベース No.13-RC5160
 (取付可能レール直径: $\phi 19 \sim \phi 32$)
 (コード番号: 000-806-114)

HANDRAI MOUNTING

USE HANDRAIL MOUNTING BASE No.13-RC5160
(CPTIF No.000-806-114 PPTIF).

THE DIAMETER OF THE HANDRAIL MAY BE FROM $\phi 19\text{mm}$ TO $\phi 32\text{mm}$.

注記 1) パイプやアンテナベースはアンテナユニットにねじ込んで後に固定する。

2) アンテナを固定するときはパイプ(アンテナベース)をアンテナにねじ込むこと。
アンテナ側をねじるとコネクタ部やケーブルに無理がかかり、故障の原因となる。

NOTE 1. FASTEN PIPE(ANTENNA BASE) TO ANTENNA UNIT FIRST THEN FIX THEM TO MAST OR HANDRAIL.
2. WHEN FIXING ANTENNA, TURN PIPE OR ANTENNA BASE; NOT THE ANTENNA.

TURNING THE ANTENNA MAY TWIST THE CABLE AND PLACE STRESS ON CONNECTOR.

A) マストへの取付け

A) マストへの取付け

く)パイプのみを使うとき
USE A PIPE ONLY.

C) 取付ける場所が傾斜しているとき

オプションのアンテナベースを使う。

USE OPTIONAL ANTENNA BASE.
