Dionex as-ap autosampler operator's manual

Dionex as-ap autosampler operator’s manual. Dionex as-ap autosampler. Dionex as-ap autosampler manual. Dionex as autosampler manual.

Description: Environment:Attachment(s): Setup and Operational Manual for AS-AP Sample Conductivity and pH Accessory Was this article helpful?

Recommended articles No headers Was this article helpful? Recommended articles Description: Environment:Attachment(s): This manual introduces the Dionex AS-AP; explains the operation of the instrument. Was this article helpful? Recommended articles Precise, Reliable PerformanceSave time with customized automated sample preparationAccomplish high reproducibility at RSDs less than 0.3%Analyze worry-free with the all-Thermo Scientific™ PEEK™ needle and flow pathSample reliably from many vial and well-plate sizes with a moving needle designGet efficient analyses with fast cycle times (<30s for 5µL injection) and high sample capacity (from 81 samples in 10mL vials to 1152 in micro well plates)Flexible ApplicationsRobust trace analysis with large-volume supportLow detection limits with automated matrix elimination and sample preconcentrationSimplified methods using automated internal standard addition, sample dilution and precolumn derivitizationPowerful OptionsProtection for thermally sensitive samples with precise sample tray cooling (4 to 60°C)Easy simultaneous or sequential injection to two ICS systems without cross-contamination of chemistriesTime-saving in-line, pre-injection measurement of sample conductivity and pH with options to automatically inject or rejectEffortless, automated fraction collection and re-injection as well as AutoDilution and resamplingPage 2Precise, Reliable PerformanceSave time with customized automated sample preparationAccomplish high reproducibility at RSDs less than 0.3%Analyze worry-free with the all-Thermo Scientific™ PEEK™ needle and flow pathSample reliably from many vial and well-plate sizes with a moving needle designGet efficient analyses with fast cycle times (<30s for 5µL injection) and high sample capacity (from 81 samples in 10mL vials to 1152 in micro well plates)Flexible ApplicationsRobust trace analysis with large-volume supportLow detection limits with automated matrix elimination and sample preconcentrationSimplified methods using automated internal standard addition, sample dilution and precolumn derivitizationPowerful OptionsProtection for thermally sensitive samples with precise sample tray cooling (4 to 60°C)Easy simultaneous or sequential injection to two ICS systems without cross-contamination of chemistriesTime-saving in-line, pre-injection measurement of sample conductivity and pH with options to automatically inject or rejectEffortless, automated fraction collection and re-injection as well as AutoDilution and resamplingPage 3Precise, Reliable PerformanceSave time with customized automated sample preparationAccomplish high reproducibility at RSDs less than 0.3%Analyze worry-free with the all-Thermo Scientific™ PEEK™ needle and flow pathSample reliably from many vial and well-plate sizes with a moving needle designGet efficient analyses with fast cycle times (<30s for 5µL injection) and high sample capacity (from 81 samples in 10mL vials to 1152 in micro well plates)Flexible ApplicationsRobust trace analysis with large-volume supportLow detection limits with automated matrix elimination and sample preconcentrationSimplified methods using automated internal standard addition, sample dilution and precolumn derivitizationPowerful OptionsProtection for thermally sensitive samples with precise sample tray cooling (4 to 60°C)Easy simultaneous or sequential injection to two ICS systems without cross-contamination of chemistriesTime-saving in-line, pre-injection measurement of sample conductivity and pH with options to automatically inject or rejectEffortless, automated fraction collection and re-injection as well as AutoDilution and resampling
