### 3. USAGE OF RENAULT DEVICE

As was mentioned above RENAULT device have following main functionalities:

- Add blank keys/cards without need PIN
- Make new keys/cards quickly, only for 1 minute

Before usage of RENAULT device you must set device in the working mode needed for you.

#### Programming of keys/cards

First of all you need to select the number of keys that you want to program. Put switch 1, 2, 3 and 4 in ON position according to the number of keys/cards that you want to program. For example if you need to learn 2 keys/cards - switch ON only DIP switch 2.

NOTE: Switches 9 and 10 should be always in ON position. They have internal test function and should never be changed. Otherwise the device may not work.

Procedure for usage of device is following:

- 1. Adjust switches depends your needs-number of keys/cards.
- 2. With ignition **OFF** put the device in OBD II socket. The LED is illuminated green for short and then it starts blinking fast indicating it is working.\*
- 3. After 2-3 seconds the LED is illuminated green constantly for about 10 seconds. During this period you should put next key/card in the ignition. If there is no next key/car, proceed to step 6.
- 4. If other keys/cards will be programmed, the LED becomes OFF, indicating that the current key/card is finished and should be removed from ignition lock.
- 5. Repeat steps 3) and 4) for each next key/card
- 6. The device finalizes the key-learning procedure, if it is accepted from the car the LED blinks slowly green, indicating that the procedure was successful.
- 7. If the key-learning procedure is rejected from the car due to some reason the LED blinks red

\*NOTE: ONLY FOR RENAULT MEGANE III, LAGUNAIII, SCENIC III, FLUENCE, SAMSUNG SM3 – WHEN YOU WANT TO PROGRAM NEW ONE VIRGIN CARD – CARD NEED TO BE IN IGNITION SOCKET. WHEN THE LED IS OFF (INDICATING TO REMOVE THE CARD) DO NOT REMOVE THE VIRGIN CARD FROM THE IGNITION.
