## High Risk Applications Hazard Notice

THIS DEVICE AND ASSOCIATED SOFTWARE ARE NOT DESIGNED, MANUFACTURED OR INTENDED FOR USE OR RESALE FOR THE OPERATION OF NUCLEAR FACILITIES, THE NAVIGATION, CONTROL OR COMMUNICATION SYSTEMS FOR AIRCRAFT OR OTHER TRANSPORTATION, AIR TRAFFIC CONTROL, LIFE SUPPORT OR LIFE SUSTAINING APPLICATIONS, WEAPONS SYSTEMS, OR ANY OTHER APPLICATION IN A HAZARDOUS ENVIRONMENT, OR REQUIRING FAIL-SAFE PERFORMANCE, OR IN WHICH THE FAILURE OF PRODUCTS COULD LEAD DIRECTLY TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE (COLLECTIVELY, "HIGH RISK APPLICATIONS").

You understand and agree that your use of Kontron devices as a component in High Risk Applications is entirely at your risk. To minimize the risks associated with your products and applications, you should provide adequate design and operating safeguards. You are solely responsible for compliance with all legal, regulatory, safety, and security related requirements concerning your products. You are responsible to ensure that your systems (and any Kontron hardware or software components incorporated in your systems) meet all applicable requirements. Unless otherwise stated in the product documentation, the Kontron device is not provided with error-tolerance capabilities and cannot therefore be deemed as being engineered, manufactured or setup to be compliant for implementation or for resale as device in High Risk Applications. All application and safety related information in this document (including application descriptions, suggested safety measures, suggested Kontron products, and other materials) is provided for reference only.

## Document Revision History

Revision	Date	By	Comment
P	Oct 2019	CW	Changed GPIO14 to functional and GPIO7 to not available
N	July 2019	CW	Include new note for the Power Specification
M	May 2 <sup>nd</sup> , 2019	CW	Included new note for the Power Connection
L	Sept 13 <sup>th</sup> 2017	CW	Note to warn about carefully connecting the power connector
K	Jan. 12 <sup>th</sup> 2017	CW	System Memory Support corrected
J	April 2016	GSZ	NEW Memory SKU
I	March 5 <sup>th</sup> 2015	MLA	I7-4790S, I5-4590S added. EXT_BAT max. 3.47 V. Always On jumper description corrected.
H	July 16 <sup>th</sup> 2014	MLA	Top text correction. Improved cooler information. Feature connector corrections. BIOS part upgraded.
G	May 27 <sup>th</sup> 2014	MLA	Display configuration table improved. BIOS part added.
F	Feb. 26 <sup>th</sup> 2014	MLA	Mating connector list updated. Pentium data added. Added KTH81/Flex and KTQ87/Flex. Updated document layout.
E	Sep. 23 <sup>rd</sup> 2013	JS MLA	CPU table updated, Graphics data, FAN3 & 4 not supported. Audio Connector description correction. KTH81 included. Connector list updated.
D	July 3 <sup>rd</sup> 2013	JS	Audio section update, page 30. CPU table updated. Picture update.
C	May 24 <sup>th</sup> 2013	JS	Entire document revised
B	May 24 <sup>th</sup> 2013	JS	Section 2.5 revised
A	May 15 <sup>th</sup> 2013	JS	Feature port revised (FAN3/4 not supported)
0	April 14 <sup>th</sup> 2013	JS	Preliminary version

## Terms and Conditions

Kontron warrants products in accordance with defined regional warranty periods. For more information about warranty compliance and conformity, and the warranty period in your region, visit <http://www.kontron.com/terms-and-conditions>.

Kontron sells products worldwide and declares regional General Terms & Conditions of Sale, and Purchase Order Terms & Conditions. Visit <http://www.kontron.com/terms-and-conditions>.

For contact information, refer to the corporate offices contact information on the last page of this user guide or visit our website CONTACT US.

## Customer Support

Find Kontron contacts by visiting: <http://www.kontron.com/support>.

## Customer Service

As a trusted technology innovator and global solutions provider, Kontron extends its embedded market strengths into a services portfolio allowing companies to break the barriers of traditional product lifecycles. Proven product expertise coupled with collaborative and highly-experienced support enables Kontron to provide exceptional peace of mind to build and maintain successful products.

For more details on Kontron's service offerings such as: enhanced repair services, extended warranty, Kontron training academy, and more visit <http://www.kontron.com/support-and-services/services>.

## Customer Comments

If you have any difficulties using this user guide, discover an error, or just want to provide some feedback, contact Kontron support. Detail any errors you find. We will correct the errors or problems as soon as possible and post the revised user guide on our website.

## For your Safety

Your new Kontron product was developed and tested carefully to provide all features necessary to ensure its compliance with electrical safety requirements. It was also designed for a long fault-free life. However, the life expectancy of your product can be drastically reduced by improper treatment during unpacking and installation. Therefore, in the interest of your own safety and of the correct operation of your new Kontron product, you are requested to conform with the following guidelines.

## High Voltage Safety Instructions

As a precaution and in case of danger, the power connector must be easily accessible. The power connector is the product's main disconnect device.

### ⚠ CAUTION

#### Warning

All operations on this product must be carried out by sufficiently skilled personnel only.

### ⚠ CAUTION

#### Electric Shock!

Before installing a non hot-swappable Kontron product into a system always ensure that your mains power is switched off. This also applies to the installation of piggybacks. Serious electrical shock hazards can exist during all installation, repair, and maintenance operations on this product. Therefore, always unplug the power cable and any other cables which provide external voltages before performing any work on this product.

Earth ground connection to vehicle's chassis or a central grounding point shall remain connected. The earth ground cable shall be the last cable to be disconnected or the first cable to be connected when performing installation or removal procedures on this product.

## Special Handling and Unpacking Instruction

### NOTICE

#### ESD Sensitive Device!

Electronic boards and their components are sensitive to static electricity. Therefore, care must be taken during all handling operations and inspections of this product, in order to ensure product integrity at all times.

Do not handle this product out of its protective enclosure while it is not used for operational purposes unless it is otherwise protected.

Whenever possible, unpack or pack this product only at EOS/ESD safe work stations. Where a safe work station is not guaranteed, it is important for the user to be electrically discharged before touching the product with his/her hands or tools. This is most easily done by touching a metal part of your system housing. It is particularly important to observe standard anti-static precautions when changing piggybacks, ROM devices, jumper settings etc. If the product contains batteries for RTC or memory backup, ensure that the product is not placed on conductive surfaces, including anti-static plastics or sponges. They can cause short circuits and damage the batteries or conductive circuits on the product.

## Lithium Battery Precautions

If your product is equipped with a lithium battery, take the following precautions when replacing the battery.

### ⚠ CAUTION

---

Danger of explosion if the battery is replaced incorrectly.

- Replace only with same or equivalent battery type recommended by the manufacturer.
  - Dispose of used batteries according to the manufacturer's instructions.
- 

## KONTRON Technical Support and Services

If you have questions about installing or using your KONTRON Product, then please notice that you will find many answers in this Users Guide. To obtain support please contact your local Distributor or Field Application Engineer (FAE).

**Before Contacting Support:** Please be prepared to provide as much information as possible:

- CPU Board
  1. Type.
  2. Part Number (find PN on label)
  3. Serial Number if available (find SN on label)
- Configuration
  1. DRAM Type and Size.
  2. BIOS Revision (find the version info in the BIOS Setup).
  3. BIOS Settings different than *Default* Settings (refer to the BIOS Setup section).
- System
  1. O/S Make and Version.
  2. Driver Version numbers (Graphics, Network, and Audio).
  3. Attached Hardware: Harddisks, CD-Rom, LCD Panels etc.

If the Kontron product seems to be defect and you want to return it for repair, please follow the guide lines from the following page:

## General Instructions on Usage

In order to maintain Kontron's product warranty, this product must not be altered or modified in any way. Changes or modifications to the product, that are not explicitly approved by Kontron and described in this user guide or received from Kontron Support as a special handling instruction, will void your warranty.

This product should only be installed in or connected to systems that fulfill all necessary technical and specific environmental requirements. This also applies to the operational temperature range of the specific board version that must not be exceeded. If batteries are present, their temperature restrictions must be taken into account.

In performing all necessary installation and application operations, only follow the instructions supplied by the present user guide.

Keep all the original packaging material for future storage or warranty shipments. If it is necessary to store or ship the product then re-pack it in the same manner as it was delivered.

Special care is necessary when handling or unpacking the product. See Special Handling and Unpacking Instruction.

## Quality and Environmental Management

Kontron aims to deliver reliable high-end products designed and built for quality, and aims to complying with environmental laws, regulations, and other environmentally oriented requirements. For more information regarding Kontron's quality and environmental responsibilities, visit <http://www.kontron.com/about-kontron/corporate-responsibility/quality-management>.

## Disposal and Recycling

Kontron's products are manufactured to satisfy environmental protection requirements where possible. Many of the components used are capable of being recycled. Final disposal of this product after its service life must be accomplished in accordance with applicable country, state, or local laws or regulations.

## WEEE Compliance

The Waste Electrical and Electronic Equipment (WEEE) Directive aims to:

- Reduce waste arising from electrical and electronic equipment (EEE)
- Make producers of EEE responsible for the environmental impact of their products, especially when the product become waste
- Encourage separate collection and subsequent treatment, reuse, recovery, recycling and sound environmental disposal of EEE
- Improve the environmental performance of all those involved during the lifecycle of EEE

---

Environmental protection is a high priority with Kontron.  
Kontron follows the WEEE directive  
You are encouraged to return our products for proper disposal.

---

# 1 Introduction

This manual describes the KTH81/mITX, KTQ87/mITX, KTH81/Flex & KTQ87/Flex boards made by KONTRON AG. The boards will also be denoted KTQ87 & KTH81.

The KTQ87/KTH81 boards are based on the Q87/H81 chipsets supporting 4<sup>rd</sup> generation Intel® Haswell i7 -, i5 2Core and 4Core desktop processors, Haswell Dual Core Pentium and Haswell Dual Core Celeron. See "Processor Support Table" for more specific details.

The differences between the four types of boards are listed in this table:

Feature	KTH81/mITX	KTQ87/mITX	KTH81/Flex	KTQ87/Flex
Form factor	mITX	mITX	Flex ATX	Flex ATX
PCIex16	Gen2	Gen3	Gen2	Gen3
Vpro	-	Depends on CPU	-	Depends on CPU
AMT	-	Yes	-	Yes
RAID	-	Yes	-	Yes
DP	2x (DP0, DP1)	3x (DP0, DP1, DP2)	2x (DP0, DP1)	3x (DP0, DP1, DP2)
LVDS	-	-	Yes (=> no DP1)	Yes (=> no DP1)
USB	2x USB3.0/2.0 8x USB2.0	4x USB3.0/2.0 6x USB2.0	2x USB3.0/2.0 8x USB2.0	4x USB3.0/2.0 8x USB2.0
LPC	-	-	2x10 pin row	2x10 pin row
DIMM slots	2x	2x	2x	4x
PCIe slots	PCIex16, Gen2. mPCIe (w. USB)	PCIex16, Gen3 mPCIe (w. USB)	PCIex16, Gen2 PCIex2 (x16 slot) + PCIex1	PCIex16, Gen3 PCIex4 (x16 slot) + PCIex1
mSATA	1x (w. USB, LPC)	1x (w. USB, LPC)	-	-
SATA	1x Gen3 2x Gen2	5x, Gen3	2x Gen3 2x Gen2	6x, Gen3
PCI Slot	-	-	1x	1x
Kbd/Mse	-	-	6-pin row	6-pin row
Fan connectors	CPU, Sys	CPU, Sys	CPU, Sys1, Sys2	CPU, Sys1, Sys2

Use of this Users Guide implies a basic knowledge of PC-AT hard- and software. This manual is focused on describing the KTQ87 / KTH81 board's special features and is not intended to be a standard PC-AT textbook.

New users are recommended to study the short installation procedure stated in the following chapter before switching-on the power.

All configuration and setup of the CPU board is either done automatically or manually by the user via the BIOS setup menus. Only exceptions are the "Clear CMOS" Jumper and the "Always On" jumper.

Latest revision of this manual, datasheet, BIOS, drivers, BSP's (Board Support Packages), Mechanical drawings (2D and 3D) can be downloaded from here: <http://www.kontron.com/products/boards-and-mezzanines/embedded-motherboards/>

## 2 Installation Procedure

### 2.1 Installing the Board

To get the board running follow these steps. If the board shipped from KONTRON has already components like RAM and CPU cooler mounted, then relevant steps below can be skipped.

#### 1. Turn off the PSU (Power Supply Unit)

**Warning:** Turn off PSU (Power Supply Unit) completely (no mains power connected to the PSU) or leave the Power Connectors unconnected while configuring the board. Otherwise components (RAM, LAN cards etc.) might get damaged. Make sure only to use standard ATX PSU. Running the board with non-compliant ATX PSU may damage the board within minutes.

#### 2. Insert the DDR3 DIMM 240pin DIMM module(s)

Be careful to push it in the slot(s) before locking the tabs. For a list of approved DDR3 DIMMs contact your Distributor or FAE. See also chapter "System Memory Support".

#### 3. Install the processor

The CPU is keyed and will only mount in the CPU socket in one way. Use finger to open/ close the CPU socket. Refer to supported processor overview for details.

#### 4. Cooler Installation

Make sure the heat paste etc. on the cooler is intact and cover the full area of the CPU. Connect Cooler Fan electrically to the FAN\_CPU connector.

#### 5. Connecting Interfaces

Insert all external cables for hard disk, keyboard etc. A monitor must be connected in order to change BIOS settings.

#### 6. Connect and turn on PSU

Connect PSU to the board by the ATXPWR (24pole power plug) and the ATX4p (4-pole power plug).

**Warning:** When connecting and disconnecting the power connector to the board, handle with care to prevent bending the PCB board. Bending the PCB board may damage components and can result in malfunction or prevent the board from functioning.

#### 7. Power Button

If the board does not start by itself when switching on the ATX PSU AC mains, then follow these instructions to start the board. Install the Always On Jumper in the Always On position or toggle the PWRBTN\_IN# signal (available in the FRONTPNL connector), by momentary shorting pins 16 (PWRBTN\_IN#) and pin 18 (GND). A "normally open" switch is recommended.

#### 8. BIOS Setup

Enter the BIOS setup by pressing the <F2> key during boot up.

Enter "Exit Menu" and Load Setup Defaults.

Refer to the "BIOS Configuration / Setup" section of this manual for details on BIOS setup.

**Note:** To clear all BIOS settings, including Password protection, activate "Load Default BIOS Settings" Jumper for ≈10 sec (without power connected).

## 9. Mounting the board in chassis

**Warning:** When mounting the board to chassis etc. please notice that the board contains components on both sides of the PCB which can easily be damaged if board is handled without reasonable care. A damaged component can result in malfunction or no function at all.

When fixing the Motherboard on a chassis it is recommended using screws with integrated washer and a diameter of ≈7mm. Do not use washers with teeth, as they can damage the PCB and cause short circuits.

## 2.2 Requirements IEC60950

Take care when designing chassis interface connectors in order to fulfil the IEC60950 standard.

When an interface or connector has a VCC (or other power) pin which is directly connected to a power plane like the VCC plane:

To protect the external power lines of the peripheral devices the customer has to ensure:

- Wires have suitable rating to withstand the maximum available power.
- That the enclosure of the peripheral device fulfils the fire protecting requirements of IEC60950.

### Lithium battery precautions

<p><b>CAUTION!</b></p> <p>Danger of explosion if battery is incorrectly re- placed. Replace only with same or equivalent type recommended by manufacturer. Dispose of used batteries according to the manufacturer's instruc- tions.</p>	<p><b>VORSICHT!</b></p> <p>Explosionsgefahr bei unsachgemäßem Austausch der Batterie. Ersatz nur durch den selben oder einen vom Hersteller empfohlenen gleichwertigen Typ. Entsorgung gebrauchter Batterien nach Anga- ben des Herstellers.</p>
<p><b>ATTENTION!</b></p> <p>Risque d'explosion avec l'échange inadéquat de la batterie. Remplacement seulement par le même ou un type équivalent recommandé par le producteur. L'évacuation des batteries usagées conformément à des indications du fabricant.</p>	<p><b>PRECAUCION!</b></p> <p>Peligro de explosión si la batería se sustituye incorrectamente. Sustituya solamente por el mismo o tipo equivalente recomendado por el fabricante. Disponga las baterías usadas según las instrucciones del fabricante.</p>
<p><b>ADVARSEL!</b></p> <p>Lithiumbatteri – Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.</p>	<p><b>ADVARSEL!</b></p> <p>Ekspløsjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.</p>
<p><b>VARNING!</b></p> <p>Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.</p>	<p><b>VAROITUS!</b></p> <p>Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan latteval- mistajan suosittelemaan tyyppiln. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.</p>

## 3 System Specifications

### 3.1 Component Main Data

The table below summarizes the features of the KTH81/mITX, KTQ87/mITX, KTH81/Flex and KTQ87/Flex.

<b>Form factor</b>	mITX (miniITX) 170,18 mm by 170,18 mm Flex (Flex-ATX) 190,5 mm by 228,6 mm
<b>Processor</b>	Support the following 4 <sup>th</sup> Generation Intel® Core™ (Haswell Desktop) processors via LGA1150 H3 Socket (max 65W TDP) <ul style="list-style-type: none"> <li>• Intel® Core™ i7</li> <li>• Intel® Core™ i5</li> <li>• Intel® Core™ i3</li> <li>• Intel® Pentium</li> <li>• Intel® Celeron</li> </ul> (4x 5 GT/s point-to-point DMI interface to PCH and 2/3/4/6/8MB internal cache).
<b>Chipset</b>	<p>Intel Q87 PCH (Platform Controller Hub)</p> <ul style="list-style-type: none"> <li>• Intel® VT-d (Virtualisation Technology for Directed I/O)</li> <li>• Intel® TXT (Trusted Execution Technology)</li> <li>• Intel® vPRO</li> <li>• Intel® AMT (Active Management Technology) version 9.0</li> <li>• Intel® AT (Anti-Theft Technology)</li> <li>• Intel® HD Audio Technology</li> <li>• Intel® RST (Rapid Storage Technology)</li> <li>• Intel® RRT (Rapid Recover Technology)</li> <li>• SATA (Serial ATA) 6Gb/s and 3Gb/s.</li> <li>• USB revision 2.0</li> <li>• USB revision 3.0</li> <li>• PCI Express revision 2.0</li> <li>• ACPI 3.0b compliant</li> <li>• Triple Display support (Triple Graphic Pipes)</li> <li>• Blue-ray HD video playback</li> </ul> <p>Intel H81 PCH (Platform Controller Hub)</p> <ul style="list-style-type: none"> <li>• Intel® VT-d (Virtualisation Technology for Directed I/O)</li> <li>• Intel® TXT (Trusted Execution Technology)</li> <li>• Intel® Rapid storage technology: ACHI Only</li> <li>• Intel® HD Audio Technology</li> <li>• SATA (Serial ATA) 6Gb/s and 3Gb/s.</li> <li>• USB revision 2.0</li> <li>• USB revision 3.0</li> <li>• PCI Express revision 2.0</li> <li>• ACPI 3.0b compliant</li> <li>• Dual Display support (Two Graphic Pipes)</li> <li>• Blue-ray HD video playback</li> </ul>

<b>Security</b>	Intel® Integrated TPM 1.2 support
<b>Memory</b>	<ul style="list-style-type: none"> <li>• DDR3 DIMM 240pin socket (2/4 sockets on mITX/Flex)</li> <li>• Support single and dual ranks DDR3 1333/1600MT/s (PC3-10600/PC3-12800)</li> <li>• Support system memory from 1x 1GB up to 2x/4x 8GB on mITX/Flex. Notes: Less than 4GB displayed in System Properties using 32bit OS (Shared Video Memory/PCI resources is subtracted)</li> <li>• ECC not supported (PGA processors do not support ECC)</li> </ul>
<b>Management</b>	Intel® Active Management Technology (Intel® AMT) 9.0 (KTQ87 only)
<b>Audio</b>	<p>Audio, 7.1 Channel High Definition Audio Codec using the VIA VT1708S codec</p> <ul style="list-style-type: none"> <li>• Line-in</li> <li>• Headphone stereo signals.</li> <li>• Surround output: SIDE, LFE, CEN, BACK and FRONT</li> <li>• Microphone: MIC1 and MIC2</li> <li>• SPDIF-Out (electrical Interface only)</li> <li>• On-board speaker (Electromagnetic Sound Generator like Hycom HY-05LF)</li> </ul>
<b>Video</b>	<p>Intel® i5 &amp; i7 4<sup>th</sup> Generation Desktop processors support Intel® HD Graphics 4600. 2 or 3x digital display ports via the Intel® Haswell CPU.</p> <ul style="list-style-type: none"> <li>• 2x DP (DisplayPorts), comply with DisplayPort 1.2 specification. (H81 only)</li> <li>• 3x DP (DisplayPorts), comply with DisplayPort 1.2 specification. (Q87 only)</li> <li>• HDMI panel support via DP to HDMI Adapter Converter.</li> <li>• DVI panel support via DP to DVI Adapter Converter.</li> <li>• VGA panel support via DP to VGA Adapter Converter.</li> <li>• LVDS panel JEIDA/VESA up to 2x24 bit (Flex only)</li> <li>• Triple independent pipes (Q87 only)</li> <li>• Triple independent or cloned displays are supported from OS.</li> <li>• Any 3 or 2 displays via DP0, DP1, DP2 (Q87 only) or LVDS (Flex only) can be used. (DP1 and LVDS cannot both be active at the same time).</li> </ul>

---------------------------------	--

## 3.2 System Overview

The block diagram below shows the architecture and main components of the KTQ87 / KTH81. The key component on the board is the Intel® Q87/H81 (Lynx Point) Desktop Platform controller Hub

### 3.3 Processor Support Table

KTQ87 is designed to support the following LGA1150 Desktop processors (up to 65W power consumption):

4<sup>rd</sup> generation Intel® Core™ i7 processor  
 4<sup>rd</sup> generation Intel® Core™ i5 processor  
 Haswell™ Dual Core Pentium  
 Haswell™ Dual Core Celeron

In the following list you will find all CPU's supported by the PCH in according to Intel but also other CPU's if successfully tested. Embedded CPU's are indicated by **green** text, successfully tested CPU's are indicated by **highlighted** text, successfully tested embedded CPU's are indicated by **green and highlighted** text and failed CPU's are indicated by **red** text. Some processors in the list are distributed from Kontron, those CPU's are marked by an \* (asterisk). However please notice that this marking is only guide line and maybe not fully updated.

Processor Brand	Clock Speed	Turbo Speed	Cores	Threads	Bus Speed	Cache	CPU Number	QDF/sSpec number	Stepping	Thermal Design Power
	[GHz]	[GHz]			[MHz]	[MB]				[°C/W]
Core™ i7 4 <sup>th</sup> gen.	3.2	4.0	4	8	1333/1600	8	4790S	SR1QM	C0	71/65

	2.4	-	2	4	1333/1600	4	4330TE	SR180	C0	72/35
Haswell™ Dual Core Pentium	3.2	-	2	2	1333/1600	3	G3420	SR1NB	C0	72/54
	2.3	-	2	2	1333/1600	3	G3320TE	SR181	C0	72/35
Haswell™ Dual Core Celeron	2.7	-	2	2	1333	2	G1820	SR1CN	C0	/53
	2.2	-	2	2	1333	2	G1820TE	SR1T6	C0	/35

Note that ECC not supported on KTQ87 / KTH81.

Not all CPU even of same type support all functions ex. i7-4770S & i5-4570S supports VPRO other CPU types may not. Intel® Turbo Boost Technology 2.0 is supported by i5 and i7, as indicated in above list of processors, and is enabling overclocking of all cores, when operated within the limits of thermal design power, temperature and current.

Note: KTH81 do not support VPRO.

Sufficient cooling must be applied to the CPU in order to remove the effect as listed in above table (Thermal Guideline). The sufficient cooling is also depending on the maximum (worst-case) ambient operating temperature and the actual load of processor.

**Warning:** Make sure sufficient airflow is always present around the components located below the cooler. Different coolers are available on the market and some is not generating any airflow or is blocking the airflow around these components, causing reduced lifetime.

It is recommended to use a cooler like the Kontron PN 1046-6305 "KTQ77 Cooler".

The design of this cooler makes sure airflow is always present around the components below the cooler. Even if Fan is set to be off, it is still running a minimum RPM (Rotation Per Minute).

Air sucked in to the cooler

Air blown out of the cooler

**Note:** The temperature of the air blown out of the cooler must be less than 60°C maximum, in order not to overheat components near the CPU. However most CPU's requires maximum 57,4°C, so in general, not to violate the CPU specification the temperature of the air should be maximum ~55°C. Some of the 65W CPU's running full load and cooled by above cooler, might start throttling at 50°C ambient air temperature.

### 3.4 System Memory support

The KTH81/mITX, KTQ87/mITX and KTH81/Flex have two DDR3 UDIMM sockets while the KTQ87/Flex has four DDR3 UDIMM sockets. The sockets support the following memory features:

- DDR3 1.5V/1.35V UDIMM 240-pin
- Dual-channel with 1 UDIMM per channel (2 UDIMM for KTQ87/Flex)
- Single/dual rank unbuffered 1333/1600MT/s (PC3-10600/PC3-12800)
- The supported 4<sup>th</sup> Generation Core i5/i7 support 1333/1600 MT/s
- From 1GB and up to 2x 8GB (4x 8GB for KTQ87/Flex).
  - Note: Less than 4GB displayed in System Properties using 32bit OS
  - (Shared Video Memory/PCI resources is subtracted)
- SPD timings supported

The installed DDR3 DIMM should support the Serial Presence Detect (SPD) data structure. This allows the BIOS to read and configure the memory controller for optimal performance. If non-SPD memory is used, the BIOS will attempt to configure the memory settings, but performance and reliability may be impacted.

#### Memory Operating Frequencies

Regardless of the DIMM type used, the memory frequency will either be equal to or less than the processor system bus frequency. For example, if DDR3 1600 memory is used with a 1333 MHz system bus frequency processor, the memory clock will operate at 167 MHz. The table below lists the resulting operating memory frequencies based on the combination of DIMMs and processor.

DIMM Type	Module name	Memory Data transfers [MT/s]	Processor system bus frequency [MHz]	Resulting memory clock frequency [MHz]	Peak transfer rate [MB/s]
DDR3 1333	PC3-10600	1333	1333 / 1600	167	10666
DDR3 1600	PC3-12800	1600	1333	167	10666
DDR3 1600	PC3-12800	1600	1600	200	12800

**Notes:** Kontron offers the following memory modules:

NEW SKU 04/2016*	SKU Name**	OLD SKU before 04/2016
1060-2492	DDR3-1333 DIMM 2GB	1054-3702
1060-2494	DDR3-1333 DIMM 4GB	1054-3703
1060-2496	DDR3-1333 DIMM 8GB	1054-3704
1060-2498	DDR3-1600 DIMM 2GB	1054-3707
1060-2500	DDR3-1600 DIMM 4GB	1054-3708
1060-2488	DDR3-1600 DIMM 8GB	1052-5601

\*SKU changes were caused by administrative issues only, no hardware changes.

\*\*Named are always the min. requirements, the shipped memory can fulfill a higher performance level

Memory modules have in general a much lower longevity than embedded motherboards, and therefore EOL of modules can be expected several times during lifetime of the motherboard. Kontron guarantees that the above P/N will be maintained so that EOL module will be replaced by other similar type of qualified module.

As a minimum it is recommend using Kontron memory modules for prototype system(s) in order to prove stability of the system and as for reference.

For volume production you might request to test and qualify other types of RAM. In order to qualify RAM it is recommend configuring 3 systems running RAM Stress Test program in heat chamber at 60°C for a minimum of 24 hours.

### 3.5 KTQ87/KTH81 Graphics Subsystem

The KTQ87 / KTH81 equipped with Intel® i5 or i7 processor supports Intel® HD Graphics 4600.

KTQ87/KTH81 supports three/two DisplayPort directly from processor.

The DP interface supports the DisplayPort 1.2 specification. The PCH supports High-bandwidth Digital Content Protection for high definition content playback over digital interfaces. The PCH also integrates audio codecs for audio support over DP interfaces.

Up to three displays (any three display outputs: DP0, DP1 & DP2 can be activated at the same time and be used to implement independent or cloned display configuration. PCIe cards can be used to replace on-board graphics or in combination with on-board graphics.

#### Intel® HD Graphics 4600

Features of the Intel HD Graphics 4600 build into the i3, i5 and i7 processors, includes:

- High quality graphics engine supporting
  - 3 Symmetric Pipe Support
  - DirectX11.1 and OpenGL 4.x compliant and lower
  - Open CL 1.2 and lower
  - Core frequency of 350 - 1250 (Turbo) MHz
  - Memory Bandwidth up to 25.6 GB/s
  - Dynamic Video Memory Technology 5.0
  - DP 1.2 MST (Multi-Stream Transport)
  - PAVP
  - HDCP
  - Audio (Protected Content)
  - Full AVC/VC1/MPEG2 HW Decode and full MVC HW Decode
- DP0, DP1 & DP2
  - 16/32bit colours in WQXGA 3840x2160 @ 60 Hz.
  - Max HDMI resolution 4096x2304 @ 24 Hz
  - DisplayPort standard 1.2
- LVDS supports single and dual channel, 18/24bit VESA/JEIDA panels up to a resolution of 1600x1200 or 1920x1080 and with limited frame rate up to 1920x1200.

## Display Configurations:

MB	LVDS	DPO HDMI, DVI or DP	DP1 HDMI, DVI or DP	DP2 HDMI, DVI or DP
KTH81/mITX	No	Yes	Yes	No
KTQ87/mITX	No	Yes	Yes	Yes
KTH81/Flex	No	Yes	Yes	No
KTH81/Flex	Yes	Yes	No	No
KTQ87/Flex	No	Yes	Yes	Yes
KTQ87/Flex	Yes	Yes	No	Yes

Note the maximum resolutions:

LVDS	1920 x 1200 @ 60 Hz
HDMI	2560 x 1600 @ 60 Hz
DVI	1920 x 1200 @ 60 Hz
DP	3840 x 2160 @ 60 Hz

The HDMI and DVI limitations apply when using passive DP converter. When using Active DP converter the limitations depends on the converter, but maximum is 3840 x 2160 @ 60 Hz.

## Graphics Adapters

Use of DP Adapter Converters can provide HDMI support or second VGA or DVI panel support.

The HDMI interface supports the HDMI 1.4a specification including audio codec. However limitations to the resolution apply: 1920x1080 (HDMI and DVI)

1051-7619 Cable DP Extender cable 200mm (when using two DP converters)

DP to VGA    DP to HDMI    DP to DVI-  
PN 1045-5779    PN 1045-5781    PN 1045-5780

Notice that only the DP to VGA adapter is an “active” converter, the HDMI and DVI converters are passive and cannot be used in a triple panel configuration.

### 3.6 Power Specification

In order to ensure safe operation of the board, the ATX12V power supply must monitor the supply voltage and shut down if the supplies are out of range – refer to the hardware manual for the actual power supply specification. Please note, In order to keep the power consumption to a minimal level, boards do not implement a guaranteed minimum load. In some cases, this can lead to compatibility problems with ATX power supplies, which require a minimum load to stay in regulation. The KTQ87/mITX / KTH81/mITX board must be powered through the ATX4P (4-pole) and the ATX24P (24-pole) connector using standard ATX power supply.

ATX12V supply: Both ATX4P connector and ATX24P connector must be used in according to the ATX12V PSU standard.

**Warning:** Hot Plugging power supply is not supported. Hot plugging might damage the board.

The requirements to the supply voltages are as follows:

Supply	Min	Max	Note
VCC3.3	3.135V	3.465V	Should be $\pm 5\%$ for compliance with the ATX specification
Vcc	4.75V	5.25V	Should be $\pm 5\%$ for compliance with the ATX specification. Should be +5/ -0% to meet the USB standard.
+12V	11.4V	12.6V	Should be $\pm 5\%$ for compliance with the ATX specification
-12V	-13.2V	-10.8V	Should be $\pm 10\%$ for compliance with the ATX specification
-5V	-5,50V	-4.5V	Not required for the KTQ87 boards
5VSB	4.75V	5.25V	Should be $\pm 5\%$ for compliance with the ATX specification

**Notice:** If there is an unintentional voltage drop in the electrical mains power supply for longer than the specified holdup time (brownout), then all supply voltages should be shut down and remain in the off state long enough to allow internal voltages to discharge sufficiently. Failure to observe this off state time means that parts of the product or attached peripherals may work incorrectly or suffer a reduction of MTBF.

The minimum off state time, to allow internal voltages to discharge, depends on the implemented PSU model and additional electrical factors. To determine the required off state time, each case must be considered individually.

For more information, contact Kontron Support.

### Power Consumption

On the following pages you will find “total system power examples” for mITX and Flex boards in different configurations:

mITX, Total System power example:

mITX, Low Power Configuration

mITX, High Power Configuration

Flex, Total System power example:

Flex, Low Power Configuration

Flex, Medium Power Configuration

Flex, High Power Configuration

## mITX, Total System power example

### The principal test system and test equipment used:

1. Tektronix TDS5104B
2. Tektronix TCPA300
3. Tektronix TCP312
4. Fluke 289
5. Fluke 179
6. ATX rail switch

**Note:** Power consumption of PSU (power loss), Monitor and HDD are not included.

### Low Power Configuration Setup KTQ87/mITX:

Standard system configuration equipped with Internal graphics, 2x SATA disks, mSATA 32GB, Intel 2.0Ghz CPU, 2x DIMM (8GB Modules), DVI Monitor, Keyboard & Mouse, 1x 8GB USB Stick, 12V active cooler, 400W ATX PSU.

### High Power Configuration Setup KTQ87/mITX:

Standard system configuration equipped with PCIe16 graphics card, mSATA 32GB, 4x SATA disks, Intel 2.5Ghz CPU, 2x DIMM (8GB Modules), DVI Monitor, Keyboard & Mouse, 4x 1-8GB USB Sticks, 12V active cooler, 400W ATX PSU.

**Note:** KTH81/mITX power results are similar to KTQ87/mITX.

9. Current Probe (Tektronix TCP0030 Current Probe)
10. USB Flash: Transcend JetFlash 4GB, ADATA C906 8GB, TDK 8GB, Kingston DTI/1G
11. Monitors: ASUS VS209N, ViewSonic VA1912MA-LED
12. Memory: SAMSUNG M391B1G73BH0-CK0 8GB PC3-12800E-11-11-E3
13. Intel Haswell CPU: QFZQ 2.20GHz (35W), QEEG 2.30GHz (45W), QE74 2.90GHz (65W)

Note: The power consumption of Display and HDD are not included.

### Low Power Configuration Setup:

KTQ87/Flex equipped with Internal graphics, 2x SATA disks, PCI card, CPU (i5) 35W, 2x DIMM PC3-10600 (2x 2GB), 1x DP Monitor, Keyboard & Mouse. 1x 1-8GB USB Stick.

### Medium Power Configuration Setup:

KTQ87/Flex equipped with Internal graphics, 4x SATA disks, PCI card, PCIex4 card, CPU (i5) 45W, 4x DIMM PC3-12800 (4x 4GB), 2x DP Monitors, Keyboard & Mouse. 2x 1-8GB USB Stick.

### High Power Configuration Setup:

KTQ87/Flex equipped with PCIex16 Gen3 Graphic card, 4x SATA disks, PCI Card, PCIex1 card, PCIex4 card, CPU (i7) 65W, 4x DIMM PC3-12800 (4x 8Gb), 2x DP Monitors, Keyboard & Mouse, 4x 1-8GB USB Sticks

Note: KTH81/Flex power results are similar to KTQ87/Flex.

## 4 Connector Locations

### 4.1 KTQ87/mITX (KTH81/mITX) - frontside

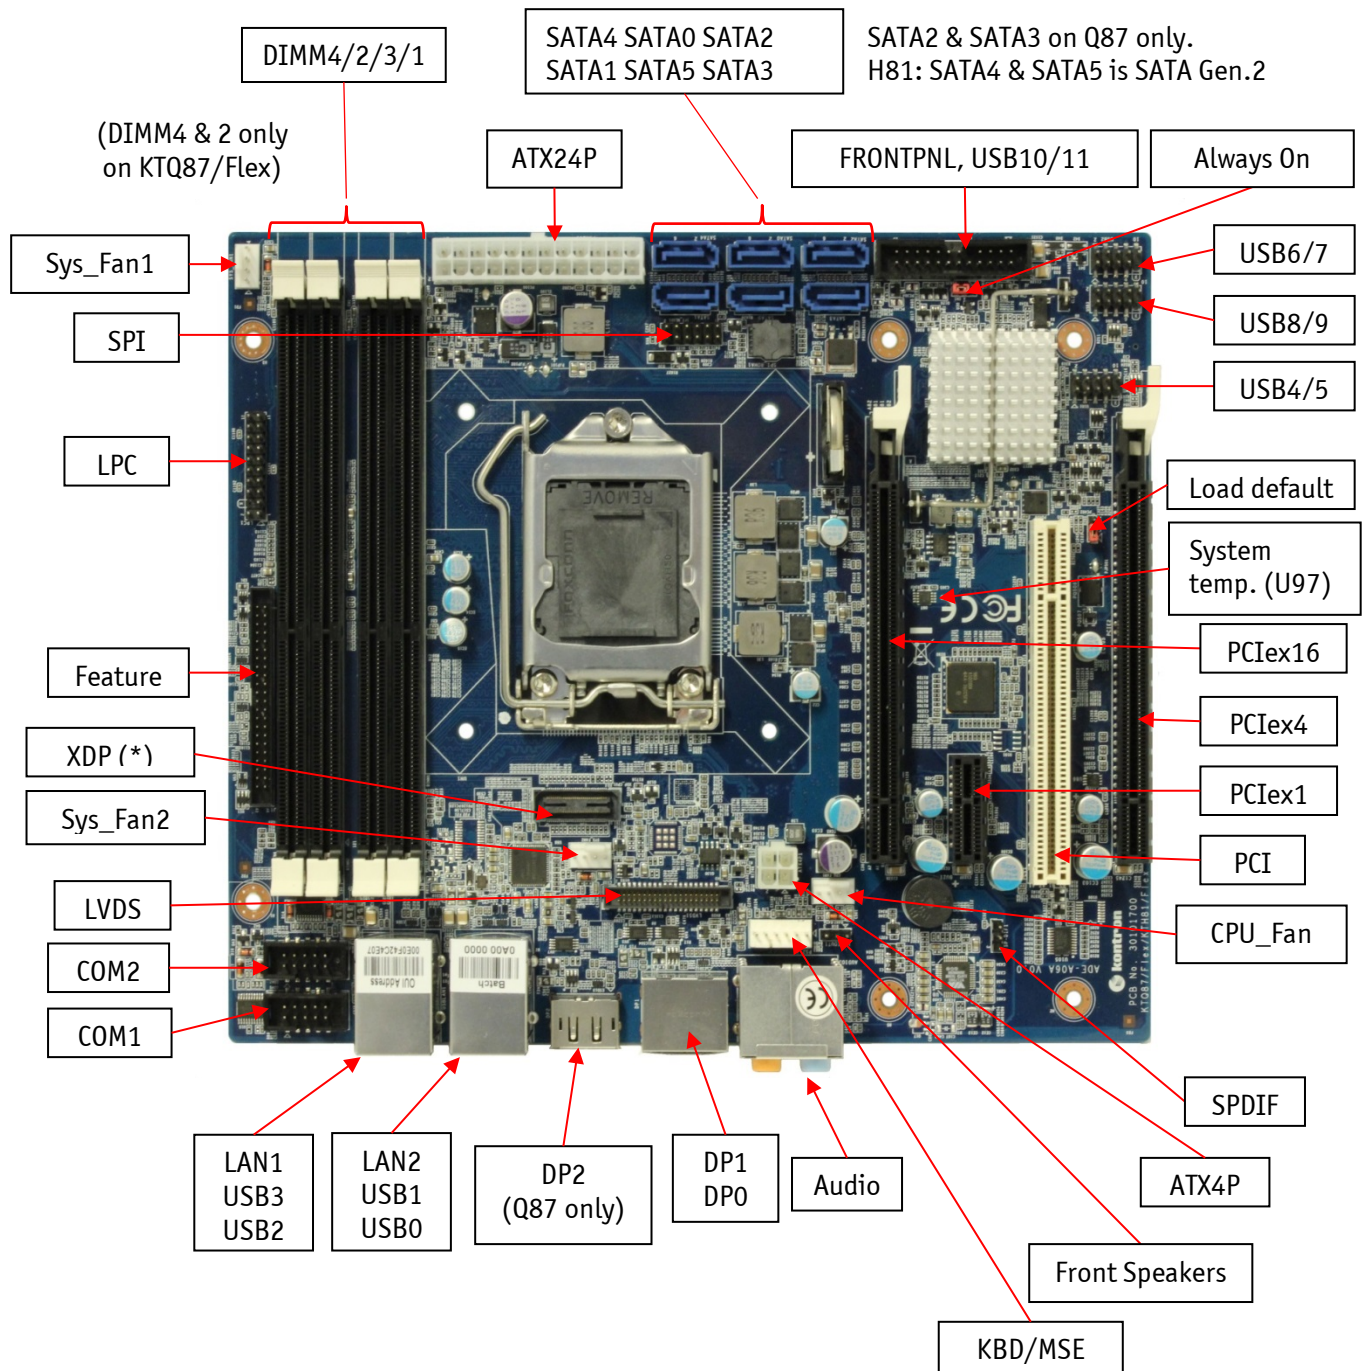

#### KTH81 Notes:

USB port 2 & 3 only supports USB 2.0.

SATA4 & SATA5 connectors are black colored and limited to SATA 300.

## 4.2 KTQ87/Flex (KTH81/Flex) - frontside

(\*) = Not Mounted.

## 5 Connector Definition

The following sections provide pin definitions and detailed description of all on-board connectors.

The connector definitions follow the following notation:

Column name	Description
Pin	Shows the pin-numbers in the connector. The graphical layout of the connector definition tables is made similar to the physical connectors.
Signal	The mnemonic name of the signal at the current pin. The notation "XX#" states that the signal "XX" is active low.
Type	AI: Analogue Input. AO: Analogue Output. I: Input, TTL compatible if nothing else stated. IO: Input / Output. TTL compatible if nothing else stated. IOT: Bi-directional tristate IO pin. IS: Schmitt-trigger input, TTL compatible. IOC: Input / open-collector Output, TTL compatible. IOD: Input / Output, CMOS level Schmitt-triggered. (Open drain output) NC: Pin not connected. O: Output, TTL compatible. OC: Output, open-collector or open-drain, TTL compatible. OT: Output with tri-state capability, TTL compatible. LVDS: Low Voltage Differential Signal. PWR: Power supply or ground reference pins.
	Ioh: Typical current in mA flowing out of an output pin through a grounded load, while the output voltage is > 2.4 V DC (if nothing else stated). Iol: Typical current in mA flowing into an output pin from a VCC connected load, while the output voltage is < 0.4 V DC (if nothing else stated).
Pull U/D	On-board pull-up or pull-down resistors on input pins or open-collector output pins.
Note	Special remarks concerning the signal.

The abbreviation *TBD* is used for specifications which are not available yet or which are not sufficiently specified by the component vendors.

## 6 IO-Area Connectors

### 6.1 DP Connectors (DP0, DP1, DP2)

The DP (DisplayPort) connectors are based on standard DP type Foxconn 3VD51203-H7JJ-7H or similar.

Note that DP2 only available on KTQ87.

Pin	Signal	Description	Type	Note
1	Lane 0 (p)		LVDS	
2	GND		PWR	
3	Lane 0 (n)		LVDS	
4	Lane 1 (p)		LVDS	
5	GND		PWR	
6	Lane 1 (n)		LVDS	
7	Lane 2 (p)		LVDS	
8	GND		PWR	
9	Lane 2 (n)		LVDS	
10	Lane 3 (p)		LVDS	
11	GND		PWR	
12	Lane 3 (n)		LVDS	
13	Config1	Aux or DDC selection	I	Internally pull down (1Mohm). Aux channel on pin 15/17 selected as default (when NC) DDC channel on pin 15/17, If HDMI adapter used (3.3V)
14	Config2	(Not used)	0	Internally connected to GND
15	Aux Ch (p)	Aux Channel (+) or DDC Clk		AUX (+) channel used by DP DDC Clk used by HDMI
16	GND		PWR	
17	Aux Ch (n)	Aux Channel (-) or DDC Data		AUX (-) channel used by DP DDC Data used by HDMI
18	Hot Plug		I	Internally pull down (100Kohm).
19	Return		PWR	Same as GND
20	3.3V		PWR	Fused by 1.5A resetable PTC fuse.

## 6.2 Ethernet Connectors

The KTQ87/KTH81 supports two channels of 10/100/1000Mb Ethernet. First Ethernet connector (LAN1) is based on Intel® Clarkville i218LM/i218-V Gigabit PHY. The i218-LM (Q87) has AMT 9.0 support and the i218-V (H81) has no AMT support. Second Ethernet connector (LAN2) is based on Intel® Pearsonville i218AT PCI Express controller.

In order to achieve the specified performance of the Ethernet port, Category 5 twisted pair cables must be used with 10/100MB and Category 5E, 6 or 6E with 1Gb LAN networks.

The signals for the Ethernet ports are as follows:

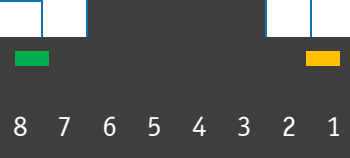

Signal	Description
MDI[0]+ / MDI[0]-	In MDI mode, this is the first pair in 1000Base-T, i.e. the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX.
MDI[1]+ / MDI[1]-	In MDI mode, this is the second pair in 1000Base-T, i.e. the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX.
MDI[2]+ / MDI[2]-	In MDI mode, this is the third pair in 1000Base-T, i.e. the BI_DC+/- pair. In MDI crossover mode, this pair acts as the BI_DD+/- pair.
MDI[3]+ / MDI[3]-	In MDI mode, this is the fourth pair in 1000Base-T, i.e. the BI_DD+/- pair. In MDI crossover mode, this pair acts as the BI_DC+/- pair.

**Note:** MDI = Media Dependent Interface.

Ethernet LAN1 is mounted together with USB Ports 2 and 3.

Ethernet LAN2 is mounted together with USB Ports 0 and 1.

The pinout of the RJ45 connectors is as follows:

Signal	PIN	Type	Ioh/Iol	Note
MDI0+				
MDI0-				
MDI1+				
MDI2+				
MDI2-				
MDI1-				
MDI3+				
MDI3-				
Flashing => communication		On => 1GB link		
	8 7 6 5 4 3 2 1			

### 6.3 USB Connectors (IO Area)

The KTQ87 board contains two EHCI (Enhanced Host Controller Interface) and one XHCI (Extensible Host Controller Interface). The two EHCI controllers, EHCI1 and EHCI2, supports up to fourteen USB 2.0 ports allowing data transfers up to 480Mb/s. The XHCI controller supports six USB 3.0 ports allowing data transfers up to 5Gb/s. The six USB 3.0 ports are shared with four of the USB 2.0 ports (USB0 – USB3) from the EHCI1.

**Note:** Not all USB 2.0 and USB 3.0 ports are physically connected to the board.

The KTQ87/mITX has total of 10 USB ports where four ports support USB 3.0 or USB 2.0 via Rear IO connectors. The KTH81/mITX has total of 10 USB ports where two ports support USB 3.0 or USB 2.0 via Rear IO connectors (USB port 2 & 3 in Rear IO only supports USB 2.0).

The KTQ87/Flex has total of 12 USB ports where four ports support USB 3.0 or USB 2.0 via Rear IO connectors. The KTH81/mITX has total of 10 USB ports where two ports support USB 3.0 or USB 2.0 via Rear IO connectors (USB port 2 & 3 in Rear IO only supports USB 2.0).

Legacy Keyboard/Mouse and wakeup from sleep states are supported. Over-current detection on all USB ports is supported. The following USB connectors are available in the IO Area.

USB Port 0 and 1 (via EHCI1/XHCI) are supplied on the combined USB0, USB1 and LAN2 connector.  
USB Port 2 and 3 (via EHCI1/XHCI) are supplied on the combined USB2, USB3 and LAN1 connector.

For USB2.0 cabling it is required to use only HiSpeed USB cable, specified in USB2.0 standard:

For USB3.0 cabling it is required to use only HiSpeed USB cable, specified in USB3.0 standard:

## USB Connector 0/1 (USB0/1)

USB Ports 0 and 1 are mounted together with LAN2 port and supports USB3.0/USB2.0.

Note	Type	Signal	PIN				Signal	Type	Note
	IO	USB1-				USB1+		IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	RX1-	5	6	7	8	9	TX1+	IO
	IO	RX1+				TX1-		IO	
	PWR	GND							
	IO	USB0-				USB0+		IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	RX0-	5	6	7	8	9	TX0+	IO
	IO	RX0+				TX0-		IO	
	PWR	GND							

**Note 1:** In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Signal	Description
USBn+ USBn- RXn+ RXn- TXn+ TXn- (n= 0,1)	Differential pair works as serial differential receive/transmit data lines.
5V/SB5V	5V supply for external devices. SB5V is supplied during power-down to allow wakeup on USB device activity. Protected by resettable 2A fuse covering both USB ports.

## USB Connector 2/3 (USB2/3)

USB Ports 2 and 3 are mounted together with LAN1 port and supports USB3.0/USB2.0.

Note	Type	Signal	PIN				Signal	Type	Note
	IO	USB3-				USB3+		IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	RX3-	5	6	7	8	9	TX3+	IO
	IO	RX3+				TX3-		IO	
	PWR	GND							
	IO	USB2-				USB2+		IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	RX2-	5	6	7	8	9	TX2+	IO
	IO	RX2+				TX2-		IO	
	PWR	GND							

**Note 1:** In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Signal	Description
USBn+ USBn- RXn+ RXn- TXn+ TXn- (n= 2,3)	Differential pair works as serial differential receive/transmit data lines.
5V/SB5V	5V supply for external devices. SB5V is supplied during power-down to allow wakeup on USB device activity. Protected by resettable 2A fuse covering both USB ports.

## 6.4 Audio Jack Connector Stack (Audio)

The on-board Audio circuit implements up to 8 Channel High Definition Audio via stacked audiojack connectors and via SPDIF connector, see SPDIF description.

Interface is based on UAA (Universal Audio Architecture), featuring five 24-bit stereo DACs and three 20-bit stereo ADCs. Beside 8 channels audio signal the stached audiojack connectors include Line-in (left and right) and Microphone (left and right).

Note	Type	Signal			Signal	Type	Note
	OA	CEN-OUT	TIP	TIP	LINE1-IN-L	IA	
	OA	LFE-OUT	RING	RING	LINE1-IN-R	IA

Audio header	-	-	-	Side speaker out
Audio header	-	Rear speaker out	Rear speaker out	Rear speaker out
Audio header	-	-	Center/ Subwoofer	Center/ Subwoofer

## 7 Internal Connectors

The KTQ87/KTH81 boards are designed to be supplied from a standard ATX (or BTX) power supply. Use of BTX supply is not required for operation, but may be required to drive high-power PCIe cards.

### 7.1 Power Connector (ATX24P)

**Warning:** Hot plugging any of the two power connectors is not allowed. Hot plugging might damage the board. In other words, turn off main supply etc. to make sure all the power lines (+12V, 5V, SB5V, 3.3V, -5V, -12V) are turned off when connecting to the motherboard.

**Important:** The ATX 12V specification does not clearly state a requirement for the ramp-up of the 5V standby voltage (SB5V). However, Kontron strongly recommends to use only PSUs where the 5V Standby (SB5V) ramp up follows the same rules as listed for +5VDC. This should ensure that the board behaves properly, in particular when powering up without or with a weak/empty battery.

**Important:** The use of both the ATX24P and the ATX4p connectors are required for operation of the KTQ87/KTH81. Refer to Note 1, in the following table.

Note	Type	Signal	PIN	Signal	Type	Note
	PWR	3V3	12 24	GND	PWR	
	PWR	+12V	11 23	5V	PWR	
	PWR	+12V	10 22	5V	PWR	
	PWR	SB5V	9 21	5V	PWR	
	I	P_OK	8 20	-5V	PWR	1
	PWR	GND	7 19	GND	PWR	
	PWR	5V	6 18	GND	PWR	
	PWR	GND	5 17	GND	PWR	
	PWR	5V	4 16	PS_ON#	OC	
	PWR	GND	3 15	GND	PWR	
	PWR	3V3	2 14	-12V	PWR	
	PWR	3V3	1 13	3V3	PWR	

**Note 1:** Use of both the ATX24P and the ATX4p connectors are required for operation of the KTQ87/KTH81.

See chapter “Power Consumption” regarding input tolerances on 3.3V, 5V, SB5V, +12 and -12V (also refer to ATX specification version 2.2).

Signal	Description
P_OK	P_OK is power good signal driven by the ATX Power Supply and indicating that the +5VDC and +3.3VDC outputs are above the undervoltage thresholds. The recommended electrical and timing characteristics of the P_OK (PWR_OK) signal are provided in the <i>ATX12V Power Supply Design Guide</i> . It is strongly recommended use of an ATX or BTX supply, to provide supervision of the 5V & 3V3 supplies. These supplies are not supervised on-board.
PS_ON#	Active low open drain signal from the board to the power supply to turn on the power supply outputs. Signal must be pulled high by the power supply.

## 7.2 Power Connector (ATX4p)

Note	Type	Signal	PIN	Signal	Type	Note
	PWR	GND	2 4	+12V	PWR	1
	PWR	GND	1 3	+12V	PWR	1

## 7.3 Fan Connectors (CPU\_Fan, SYS\_Fan1, SYS\_Fan2)

The SYS\_FAN1 and SYS\_Fan2 can be used to power, control and monitor fans for chassis ventilation etc. The CPU\_Fan is used for the connection of the FAN included in active CPU coolers.

The 4pin header is recommended to be used for driving 4-wire type Fan in order to implement FAN speed control. 3-wire Fan support is also possible, but no fan speed control is integrated.

### 4-pin Mode:

Header	Pin	Signal	Description	Type
1	1	PWM	PWM output	0-3.3
	2	TACHO	Tacho signal	I
	3	12V	Power +12V	PWR
	4	GND	Ground	PWR

### 3-pin Mode:

Header	Pin	Signal	Description	Type
1	1		Not used	
	2	TACHO	Tacho signal	I
	3	12V	Power +12V	PWR
	4	GND	Ground	PWR

Signal	Description
PWM	PWM output signal for FAN speed control.
TACHO	Tacho input signal from the fan, for rotation speed supervision RPM (Rotation Per Minute). The signal shall be generated by an open collector transistor or similar. Onboard is a pull-up resistor 4K7 to +12V. The signal has to be pulsed and onboard circuit is prepared for two pulses per rotation.
12V	+12V supply for fan. A maximum of 2000mA can be supplied from this pin.
GND	Power Supply GND signal

## 7.4 PS/2 Keyboard and Mouse Connector (KBD/MSE) (PS2)

Attachment of a PS/2 keyboard/mouse can be done through the pinrow connector KBD/MSE (Flex boards only). Both interfaces utilize open-drain signalling with on-board pull-up.

The PS/2 mouse and keyboard is supplied from SB5V when in standby mode in order to enable keyboard or mouse activity to bring the system out from power saving states. The supply is provided through a 1.1A resettable fuse.

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	KBDCLK	IOD	/14mA	2K7	
2	KBDDAT	IOD	/14mA	2K7	
3	MSCLK	IOD	/14mA	2K7	
4	MSDAT	IOD	/14mA	2K7	
5	5V/SB5V	PWR	-	-	
6	GND	PWR	-	-	

Signal Description – Keyboard & and mouse Connector (KBDMSE).

Signal	Description
MSCLK	Bi-directional clock signal used to strobe data/commands from/to the PS/2 mouse.
MSDAT	Bi-directional serial data line used to transfer data from or commands to the PS/2 mouse.
KDBCLK	Bi-directional clock signal used to strobe data/commands from/to the PC-AT keyboard.
KBDDAT	Bi-directional serial data line used to transfer data from or commands to the PC-AT keyboard.

Available cable kit:

PN 1053-2384 Bracket Cable 6-Pin to PS2-Kbd-Mse

## 7.5 LVDS Flat Panel Connector (LVDS)

The LVDS connector (Flex boards only) is based on 40 pole connector type Samtec SHF-120-01-F-D-SM-K-TR or similar.

Note	Type	Signal	PIN	Signal	Type	Note
Max. 0.5A	PWR	+12V	1 2	+12V	PWR	Max. 0.5A
Max. 0.5A	PWR	+12V	3 4	+12V	PWR	Max. 0.5A

Max. 0.5A	PWR	+5V	7 8	GND	PWR	Max. 0.5A
Max. 0.5A	PWR	LCDVCC	9 10	LCDVCC	PWR	Max. 0.5A
2K2Ω, 3.3V	OT	DDC CLK	11 12	DDC DATA	OT	2K2Ω, 3.3V
3.3V level	OT	BKLTCTL	13 14	VDD ENABLE	OT	3.3V level
3.3V level	OT	BKLTEN#	15 16	GND	PWR	Max. 0.5A
	LVDS	LVDS A0-	17 18	LVDS A0+	LVDS	
	LVDS	LVDS A1-	19 20	LVDS A1+	LVDS	
	LVDS	LVDS A2-	21 22	LVDS A2+	LVDS	
	LVDS	LVDS ACLK-	23 24	LVDS ACLK+	LVDS	
	LVDS	LVDS A3-	25 26	LVDS A3+	LVDS	
Max. 0.5A	PWR	GND	27 28	GND	PWR	Max. 0.5A
	LVDS	LVDS B0-	29 30	LVDS B0+	LVDS	
	LVDS	LVDS B1-	31 32	LVDS B1+	LVDS	
	LVDS	LVDS B2-	33 34	LVDS B2+	LVDS	
	LVDS	LVDS BCLK-	35 36	LVDS BCLK+	LVDS	
	LVDS	LVDS B3-	37 38	LVDS B3+	LVDS	
Max. 0.5A	PWR	GND	39 40	GND	PWR	Max. 0.5A

**Note:** The LVDS connector supports single and dual channel, 18/24bit SPWG panels up to a resolution of 1600x1200 or 1920x1080 and with limited frame rate up to 1920x1200.

Signal Description – LVDS Flat Panel Connector:

Signal	Description
LVDS A0..A3	LVDS A Channel data
LVDS ACLK	LVDS A Channel clock
LVDS B0..B3	LVDS B Channel data
LVDS BCLK	LVDS B Channel clock
BKLTCTL	Backlight control (1), PWM signal to implement voltage in the range 0-3.3V
BKLTEN#	Backlight Enable signal (active low) (2)
VDD ENABLE	Output Display Enable.
LCDVCC	VCC supply to the display. 5V or 3.3V (1A Max.) selected in BIOS setup menu. Power sequencing depends on LVDS panel selection. (Shared with eDP connector)
DDC CLK	DDC Channel Clock

**Notes:** Windows API will be available to operate the BKLTCTL signal. Some Inverters have a limited voltage range 0- 2.5V for this signal: If voltage is > 2.5V the Inverter might latch up. Some Inverters generates noise on the BKLTCTL signal, causing the LVDS transmission to fail (corrupted picture on the display). By adding a 1Kohm resistor in series with this signal, mounted at the Inverter end of the cable kit, the noise is limited and the picture is stable.  
If the Backlight Enable is required to be active high then, check the following BIOS Chipset setting: Backlight Signal Inversion = Enabled.

## 7.6 SATA (Serial ATA) Disk Interface

KTQ87 / KTH81 has integrated SATA Host controller (PCH in the Q87 / H81 chipset) which supports independent DMA operation on 6 / 4 ports. One device can be installed on each port, via point-to-point interface (SATA cable), for a maximum of 6 / 4 SATA devices. On the mITX the SATA ports are available as 5 / 3 SATA connectors + 1 mSATA connector and on the Flex the SATA ports are available as 6 / 4 SATA connectors.

All the SATA ports on the Q87 support SATA Gen3 (6.0/3.0/1.5Gb/s) are supported, while two SATA ports on the H81 supports Gen3 and the remaining two ports support Gen2 (3.0/1.5Gb/s).

**Note:** Before installing OS on a SATA drive make sure the drive is not a former member of a RAID system. If so some hidden data on the disk has to be erased. To do this, connect two SATA drives and select RAID in BIOS. Save settings and select <Ctrl> <I> while booting to enter the RAID setup menu. Now the hidden RAID data will be erased from the selected SATA drive.

**Note:** KTH81 do not support RAID.

The SATA controller supports:

- 2 to 6-drive RAID 0 (data striping)
- 2-drive RAID 1 (data mirroring)
- 3 to 6-drive RAID 5 (block-level striping with parity).
- 4-drive RAID 10 (data striping and mirroring)
- 2 to 6-drive matrix RAID, different parts of a single drive can be assigned to different RAID devices.
- AHCI (Advanced Host Controller Interface)
- NCQ (Native Command Queuing). NCQ is for faster data access.
- Swap bay support (not supported on mSATA)
- Intel® Rapid Recover Technology
- 2 – 256TB volume (Data volumes only)
- Capacity expansion
- TRIM in Windows 7 (in AHCI and RAID mode for drives not part of a RAID volume). (TRIM is for SSD data garbage handling).

Sata connector pinning: SATA0, SATA1, SATA2, SATA3, SATA4 and SATA5. (SATA1 used by mSATA on mITX)

PIN	Signal	Type	Ioh/Iol	Note
1	GND	PWR	-	
2	SATA* TX+			
3	SATA* TX-			
4	GND	PWR	-	
5	SATA* RX-			
6	SATA* RX+			
7	GND	PWR	-	

Signal	Description
SATA* RX+ / RX-	Host transmitter differential signal pair
SATA* TX+ / TX-	Host receiver differential signal pair

“\*” specifies 0, 1, 2, 3, 4, 5 depending on SATA port.

Available cable kit:

PN 821035 Cable SATA 500mm

## 7.7 USB Connectors (USB)

The KTQ87 board contains two EHCI (Enhanced Host Controller Interface) host controllers (EHCI1 and EHCI2) and a XHCI (Extensible Host Controller Interface). The EHCI controllers support up to fourteen USB 2.0 ports allowing data transfers up to 480Mb/s and the XHCI controller supports up to six USB 3.0 ports allowing data transfers up to 5Gb/s. Four of the USB 3.0 ports are shared with four of the USB 2.0 ports (USB0 – USB3).

**Note:** Not all USB 2.0 and USB 3.0 ports are physically connected to the board.

Legacy Keyboard/Mouse and wakeup from sleep states are supported. Over-current detection on all fourteen USB ports is supported.

### Notes:

On KTQ87, the four USB 3.0 ports (USB0 – USB3) are shared with four of the EHCI1 USB 2.0 ports.

On KTH81, the two USB 3.0 ports (USB0 – USB1) are shared with two of the EHCI1 USB 2.0 ports.

KTH81 only supports two USB 3.0 ports.

See chapter “USB Connectors (IO Area)” for more information on USB0 – USB3.

The following USB ports are available on Internal Pinrows:

USB 4 & 5 (via EHCI1) are supplied on USB4/5 internal pinrow connector (USB1).

USB 6 & 7 (via EHCI1) are supplied on USB6/7 internal pinrow connector (USB2). (KTQ87/Flex only).

USB 8 & 9 (via EHCI2):

Flex: are supplied on the USB8/9 internal pinrow connector (USB3).

mITX: USB8 is supplied on the mPCIe slot and USB9 is supplied on mSATA slot.

USB Port 10 and 11 (via EHCI2) are supplied on the USB10/11 internal pinrow FRONT PNL connector.

**Note:** It is required to use only HiSpeed USB cable, specified in USB2.0 standard:

### USB 4 & 5 (USB4/5) (USB1)

USB Ports 4 and 5 are supplied on the internal USB4/5 pinrow connector USB1.

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB8-	3 4	USB9-	IO	
	IO	USB8+	5 6	USB9+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

### USB 6 & 7 (USB6/7) (USB2)

USB Ports 6 and 7 are supplied on the internal USB6/7 pinrow connector USB1. (KTQ87/Flex only).

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB8-	3 4	USB9-	IO	
	IO	USB8+	5 6	USB9+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

### USB 8 & 9 (USB8/9) (USB3)

USB Ports 6 and 7 are supplied on the internal USB6/7 pinrow connector USB1. (Flex only).

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB8-	3 4	USB9-	IO	
	IO	USB8+	5 6	USB9+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

Note1:

Signal	Description
USBx+ USBx-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Each 5V protected by resettable 1A fuse.

In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Available cable kit:

PN 821401 Bracket Dual USB Cable

## 7.8 Serial COM1 – COM2 Ports (COM1, COM2)

Two RS232 serial ports are available on the KTQ87/KTH81.

The typical definition of the signals in the COM ports is as follows:

Signal	Description
TxD	Transmitted Data, sends data to the communications link. The signal is set to the marking state (-12V) on hardware reset when the transmitter is empty or when loop mode operation is initiated.
RxD	Received Data, receives data from the communications link.
DTR	Data Terminal Ready, indicates to the modem etc. that the on-board UART is ready to establish a communication link.
DSR	Data Set Ready, indicates that the modem etc. is ready to establish a communications link.
RTS	Request To Send, indicates to the modem etc. that the on-board UART is ready to exchange data.
CTS	Clear To Send, indicates that the modem or data set is ready to exchange data.
DCD	Data Carrier Detect, indicates that the modem or data set has detected the data carrier.
RI	Ring Indicator, indicates that the modem has received a ringing signal from the telephone line.

The pinout of Serial ports COM1 (J19), COM2 (J18)

Note	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Note
	-	I	DCD	1 2	DSR	I	-	
	-	I	RxD	3 4	RTS	O		
		O	TxD	5 6	CTS	I	-	
		O	DTR	7 8	RI	I	-	
	-	PWR	GND	9 10	5V	PWR	-	1

**Note 1:** The COM1, COM2 5V supply is fused with common 1.5A resettable fuse.

DB9 adapter cables (PN 821016 200mm long and 821017 100mm long) are available for implementing standard COM ports on chassis.

Available cable kit (DB9 adapter cables):

PN 821017 - 100 mm or PN 821016 - 200 mm

## 7.9 Audio Connectors

The on-board Audio circuit implements 7.1+2 Channel High Definition Audio with UAA (Universal Audio Architecture), featuring five 24-bit stereo DACs and three 20-bit stereo ADCs.

The following Audio connectors are available as Internal connectors.

### Headphone and Mic2

Headphone and Mic2 are accessible via Front Panel Connector, see Front Panel Connector description.

### Front Speakers (LINEOUT)

The Front Speakers (Left and Right) interface is available through 3-pin connector. These outputs are shared with the Speaker Audio Jack connector (green).

Up to 100 dB Signal-to-Noise Ratio (SNR).

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	Front Speaker-R		-	-	
2	GND	PWR	-	-	
3	Front Speaker -L	-	-	-	

### SPDIF (SP-DIF)

The digital audio interface (electrical SPDIF-Out) is available through 3-pin connector and can be used to implement 8 (7.1) Channel High Definition Audio.

Circuit is based on high fidelity 8-channel HD audio codec which is compatible with Intel HD Audio specification and supports stereo 24-bit resolution and up to 192 kHz sample rate for DACs/ADCs. Up to 90 dB Signal-to-Noise Ratio (SNR).

16/20/24-bit S/PDIF TX Outputs supporting 48K/96K/44.1K/88.2 KHz sample rate

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	5V		-	-	
2	SPDIF-OUT		-	-	
3	GND	PWR	-	-	

## 7.10 Front Panel Connector (FRONTPNL) (J2)

	-	-	AI	MIC2-L	23 24	MIC2-R	AI	-	-	

Signal	Description
USB10/11_5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1.1A fuse covering both USB ports.
USB10+/USB10-	Universal Serial Bus Port 10 Differentials: Bus Data/Address/Command Bus.
USB11+/USB11-	Universal Serial Bus Port 11 Differentials: Bus Data/Address/Command Bus.
+5V	Maximum load is 1A or 2A per pin if using IDC connector flat cable or crimp terminals respectively.
SATA_LED#	SATA Activity LED (active low signal). 3V3 output when passive.
SUS_LED	Suspend Mode LED (active high signal). Output 3.3V via 470Ω.
PWRBTN_IN#	Power Button In. Toggle this signal low to start the ATX / BTX PSU and boot the board.
RSTIN#	Reset Input. When pulled low for a minimum 16ms, the reset process will be initiated. The reset process continues even though the Reset Input is kept low.
Headphone	Headphone stereo signals (different audio stereo channel than Front Speaker signals).
MIC2	MIC2 is second stereo microphone input.
SB3V3	Standby 3.3V voltage.
AGND	Analogue Ground for Audio.

Available cable kit:

PN 821042 Cable Front Panel Open-End, 300 mm

**Notes:** 1. Pull-up to +3V3Dual (+3V3 or SB3V3). 2. Pull-up to on-board Battery. 3. Pull-up to +3V3. 4. Not Available. 5. Not available on mITX, Shared with onboard FAN2 on Flex.

Signal	Description
CASE_OPEN#	CASE OPEN, used to detect if the system case has been opened. This signal's status is readable, so it may be used like a GPI when the Intruder switch is not required.
SMBC	SMBus Clock signal
SMBD	SMBus Data signal
S3#	S3 sleep mode, active low output, optionally used to deactivate external system.
S5#	S5 sleep mode, active low output, optionally used to deactivate external system.
PWR_OK	PoWeR OK, signal is high if no power failures are detected. (This is not the same as the P_OK signal generated by ATX PSU).
EXT_BAT	(EXternal BATtery) option for connecting + terminal of an external primary cell battery (2.5 - 3.47 V) (- terminal connected to GND). The external battery is protected against charging and can be used with/without the on-board battery installed.
FAN3OUT	FAN 3 speed control OUTput, 3.3V PWM signal can be used as Fan control voltage.
FAN3IN	FAN3 Input. 0V to +3V3 amplitude Fan 3 tachometer input.
FAN4OUT	FAN 4 speed control OUTput, 3.3V PWM signal can be used as Fan control voltage.
FAN4IN	FAN4 Input. 0V to +3V3 amplitude Fan 3 tachometer input.
SB3V3	Max. load is 0.75A (1.5A < 1 sec.)
SB5V	StandBy +5V supply.

continues

Signal	Description
GPI00..17	General Purpose Inputs / Output. These Signals may be controlled or monitored through the use of the KT-API-V2 (Application Programming Interface). (GPI07 and GPI016 not available, used internally)
EGCLK	Extend GPIO Clock signal
EGAD	Extend GPIO Address Data signal
EGCS#	Extend GPIO Chip Select signal, active low
TMA0	Timer Output
+12V	Max. load is 0.75A (1.5A < 1 sec.)

The GPIO's are controlled via the ITE IT8516F Embedded Controller. Each GPIO has 100pF to ground, clamping Diode to 3V3 and has multiplexed functionality. Some pins can be DAC (Digital to Analogue Converter output), PWM (Pulse Width Modulated signal output), ADC (Analogue to Digital Converter input), TMRI (Timer Counter Input), WUI (Wake Up Input), RI (Ring Indicator Input) or some special function.

Signal	IT8516F pin name	Type	Description
GPI00	DAC0/GPJ0	AO/IOS	
GPI01	DAC1/GPJ1	AO/IOS	
GPI02	DAC2/GPJ2	AO/IOS	
GPI03	DAC3/GPJ3	AO/IOS	
GPI04	PWM2/GPA2	08/IOS	
GPI05	PWM3/GPA3	08/IOS	
GPI06	PWM4/GPA4	08/IOS	
GPI07	PWM5/GPA5	08/IOS	not available (used internally)
GPI08	ADC0/GPI0	AI/IS	
GPI09	ADC1/GPI1	AI/IS	
GPI010	ADC2/GPI2	AI/IS	
GPI011	ADC3/GPI3	AI/IS	
GPI012	ADC4/WUI28/GPI4	AI/IS/IS	
GPI013	RI1#/WUI0/GPD0	IS/IS/IOS	
GPI014	RI2#/WUI1/GPD1	IS/IS/IOS	
GPI015	TMRI0/WUI2/GPC4	IS/IS/IOS	
GPI016	TMRI1/WUI3/GPC6	IS/IS/IOS	not available (used internally)
GPI017	L80HLAT/BA0/WUI24/GPE0	04/04/IS/IOS	

Available cable kit and Break-Out-Board:

PN 1052-5885 Cable, Feature 44pol 1 to1, 300mm

PN 820978 Feature BOB (Break-Out-Board)

## 7.12 “Load Default BIOS Settings” (Load default) (CMOS)

The “Load Default BIOS Settings” Jumper (J5) can be used to recover from incorrect BIOS settings. As an example, incorrect BIOS setting which causes the attached display not to turn on can be erased by this Jumper.

The Jumper has 3 positions: Pin 1-2, Pin2-3 (default position) and not mounted.

mITX

Load default Jumper  
(Shown in Default position)

Flex

**Warning** Don't leave the jumper in position 2-3, otherwise if power is disconnected, the battery will fully deplete within a few weeks.

To **Load Default BIOS Settings**, inclusive erasing password and RTC:

1. Turn off power completely (no SB5V).
2. Remove the Jumper completely from CMOS1.
3. Insert jumper into position 2-3 (Clear CMOS data).
4. Wait for 10 sec.
5. Move the Jumper back to position 1-2 (default position).
6. Turn on power (use the Power On Button if required to boot).
7. Motherboard beeps number of times.
8. CMOS data lost message are shown.
9. Reboot and enter BIOS setup menu and select new settings.

Motherboard might automatically reboot a few times. Wait until booting is completed.

CMOS1		Description
pin1-2	pin2-3	
X	-	Default position
-	X	Load Default BIOS Settings exclusive erasing Password
-	-	No function. Note: may load default BIOS settings after several minutes

7.13 “Always On” (Always On) (A\_ON)

The “Always On” can be used to implement hardware controlled Always ON by jumper. When “Always On” is selected, then the board will power up automatically when power is connected.

The board can still be shut down by PWRBTN\_IN# (power button in) activation (via Front Panel connector).

mITX

Flex

Always ON Jumper  
(Shown in Default position)

Always On		Description
pin1-2	pin2-3	
X	-	Always On selection
-	X	Default position
-	-	No function. Note: may load default BIOS settings after several minutes

## 7.14 SPI Connector (SPI\_HEAD)

The SPI Connector is normally not used. If however a SPI BIOS is connected via the SPI Connector then the board will attempt to boot from it.

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	-			CLK	1 2	SB3V3	PWR	-	-	
	-		I	CS0#	3 4	ADDIN	IO		/10K

	1K		IO	SPI_I02_#WP	11 12	SPI_I03_#HOLD	IO		1K	

Signal	Description
CLK	Serial Clock
SB3V3	3.3V Standby Voltage power line. Normally output power, but when Motherboard is turned off then the on-board SPI Flash can be 3.3V power sourced via this pin.
CS0#	CS0# Chip Select 0, active low.
ADDIN	ADDIN input signal must be NC.
MOSI	Master Output, Slave Input.
ISOLATE#	The ISOLATE# input, active low, is normally NC, but must be connected to GND when programming the SPI flash. Power Supply to the Motherboard must be turned off when loading SPI flash. The pull up resistor is connected via diode to 5VSB.
MISO	Master Input, Slave Output
SPI_I02_#WP	SPI Data I/O: A bidirectional signal used to support Dual IO Fast Read, Quad IO Fast Read and Quad Output Fast Read modes. The signal is not used in Dual Output Fast Read mode.
SPI_I03_#HOLD	SPI Data I/O: A bidirectional signal used to support Dual IO Fast Read, Quad IO Fast Read and Quad Output Fast Read modes. The signal is not used in Dual Output Fast Read mode.

## 7.15 LPC Connector (J30)

The LPC connector (Flex board only) is in general unsupported. Only under special circumstances may the LPC interface be of interest.

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Pull U/D	Note

## 8 Slot Connectors (PCIe, mPCIe, mSATA, PCI)

### 8.1 PCIe Connectors

The mITX boards supports one PCIe<sub>x</sub>16 (16-lanes), one miniPCIe and one mSATA in mPCIe slot.

The Flex boards supports one PCIe<sub>x</sub>16 (16-lanes), one PCIe<sub>x</sub>2 (2-lanes) in a x16 slot and one PCIe<sub>x</sub>1 slot.

The **PCIe<sub>x</sub>16** port can be used for external PCI Express cards inclusive graphics card. (On the Flex boards it is located nearest the CPU). Maximum theoretical bandwidth depends on the chipset, Q87 / H81 support up to PCIe 3.0 / PCIe 2.0, so Q87 support 8 Gbps effectively for each lane and direction, 256 Gbps in total for 16 lanes, while the H81 support 4 Gbps effectively for each lane and direction, 128 Gbps in total for 16 lanes.

The **PCIe<sub>x</sub>2** (in a x16 slot) (only on Flex board) can be used for external PCI Express cards inclusive graphics card. It is located far away from CPU. Maximum theoretical bandwidth is 4 Gbps effectively for each lane and direction, 16 Gbps in total for 2 lanes.

The **PCIe<sub>x</sub>1** (only on Flex board) can be used for external PCI Express cards inclusive graphics card. Maximum theoretical bandwidth is 4 Gbps effectively for each direction, 8 Gbps in total.

One **miniPCIe** (PCIe 2.0) port (mITX boards only) supporting mPCIe cards.

One **miniPCIe** (mSATA) port (mITX boards only) supporting mSATA cards.

miniPCIe slots are equipped with one USB 2.0 port. The USB connected to the mSATA slot do not support WAKE function.

## Signal Description – PCI Slot Connector

SYSTEM PINS	
CLK	Clock provides timing for all transactions on PCI and is an input to every PCI device. All other PCI signals, except RST#, INTA#, INTB#, INTC#, and INTD#, are sampled on the rising edge of CLK and all other timing parameters are defined with respect to this edge. PCI operates at 33MHz.
PME#	Power Management Event interrupt signal. Wake up signal.
RST#	Reset is used to bring PCI-specific registers, sequencers, and signals to a consistent state. What effect RST# has on a device beyond the PCI sequencer is beyond the scope of this specification, except for reset states of required PCI configuration registers. Anytime RST# is asserted, all PCI output signals must be driven to their benign state. In general, this means they must be asynchronously tri-stated. SERR# (open drain) is floated. REQ# and GNT# must both be tri-stated (they cannot be driven low or high during reset). To prevent AD, C/BE#, and PAR signals from floating during reset, the central resource may drive these lines during reset (bus parking) but only to a logic low level—they may not be driven high. RST# may be asynchronous to CLK when asserted or deasserted. Although asynchronous, deassertion is guaranteed to be a clean, bounce-free edge. Except for configuration accesses, only devices that are required to boot the system will respond after reset.
ADDRESS AND DATA	
AD[31::00]	Address and Data are multiplexed on the same PCI pins. A bus transaction consists of an address phase followed by one or more data phases. PCI supports both read and write bursts. The address phase is the clock cycle in which FRAME# is asserted. During the address phase AD[31::00] contain a physical address (32 bits). For I/O, this is a byte address; for configuration and memory, it is a DWORD address. During data phases AD[07::00] contain the least significant byte (lsb) and AD[31::24] contain the most significant byte (msb). Write data is stable and valid when IRDY# is asserted and read data is stable and valid when TRDY# is asserted. Data is transferred during those clocks where both IRDY# and TRDY# are asserted.
C/BE[3::0]#	Bus Command and Byte Enables are multiplexed on the same PCI pins. During the address phase of a transaction, C/BE[3::0]# define the bus command. During the data phase C/BE[3::0]# are used as Byte Enables. The Byte Enables are valid for the entire data phase and determine which byte lanes carry meaningful data. C/BE[0]# applies to byte 0 (lsb) and C/BE[3]# applies to byte 3 (msb).
PAR	Parity is even parity across AD[31::00] and C/BE[3::0]#. Parity generation is required by all PCI agents. PAR is stable and valid one clock after the address phase. For data phases, PAR is stable and valid one clock after either IRDY# is asserted on a write transaction or TRDY# is asserted on a read transaction. Once PAR is valid, it remains valid until one clock after the completion of the current data phase. (PAR has the same timing as AD[31::00], but it is delayed by one clock.) The master drives PAR for address and write data phases; the target drives PAR for read data phases.
INTERFACE CONTROL PINS	
FRAME#	Cycle Frame is driven by the current master to indicate the beginning and duration of an access. FRAME# is asserted to indicate a bus transaction is beginning. While FRAME# is asserted, data transfers continue. When FRAME# is deasserted, the transaction is in the final data phase or has completed.
IRDY#	Initiator Ready indicates the initiating agent's (bus master's) ability to complete the current data phase of the transaction. IRDY# is used in conjunction with TRDY#. A data phase is completed on any clock both IRDY# and TRDY# are sampled asserted. During a write, IRDY# indicates that valid data is present on AD[31::00]. During a read, it indicates the master is prepared to accept data. Wait cycles are inserted until both IRDY# and TRDY# are asserted together.
TRDY#	Target Ready indicates the target agent's (selected device's) ability to complete the current data phase of the transaction. TRDY# is used in conjunction with IRDY#. A data phase is completed on any clock both TRDY# and IRDY# are sampled asserted. During a read, TRDY# indicates that valid data is present on AD[31::00]. During a write, it indicates the target is prepared to accept data. Wait cycles are inserted until both IRDY# and TRDY# are asserted together.
STOP#	Stop indicates the current target is requesting the master to stop the current transaction.
LOCK#	Lock indicates an atomic operation that may require multiple transactions to complete. When LOCK# is asserted, non-exclusive transactions may proceed to an address that is not currently locked. A grant to start a transaction on PCI does not guarantee control of LOCK#. Control of LOCK# is obtained under its own protocol in conjunction with GNT#. It is possible for different agents to use PCI while a single master retains ownership of LOCK#. If a device implements Executable Memory, it should also implement LOCK# and guarantee complete access exclusion in that memory. A target of an access that supports LOCK# must provide exclusion to a minimum of 16 bytes (aligned). Host bridges that have system memory behind them should implement LOCK# as a target from the PCI bus point of view and optionally as a master.
IDSEL	Initialization Device Select is used as a chip select during configuration read and write transactions.
DEVSEL#	Device Select, when actively driven, indicates the driving device has decoded its address as the target of the current access. As an input, DEVSEL# indicates whether any device on the bus has been selected.

ARBITRATION PINS (BUS MASTERS ONLY)	
REQ#	Request indicates to the arbiter that this agent desires use of the bus. This is a point to point signal. Every master has its own REQ# which must be tri-stated while RST# is asserted.
GNT#	Grant indicates to the agent that access to the bus has been granted. This is a point to point signal. Every master has its own GNT# which must be ignored while RST# is asserted. While RST# is asserted, the arbiter must ignore all REQ# lines since they are tri-stated and do not contain a valid request. The arbiter can only perform arbitration after RST# is deasserted. A master must ignore its GNT# while RST# is asserted. REQ# and GNT# are tri-state signals due to power sequencing requirements when 3.3V or 5.0V only add-in boards are used with add-in boards that use a universal I/O buffer.
ERROR REPORTING PINS.	
The error reporting pins are required by all devices and maybe asserted when enabled	
PERR#	Parity Error is only for the reporting of data parity errors during all PCI transactions except a Special Cycle. The PERR# pin is sustained tri-state and must be driven active by the agent receiving data two clocks following the data when a data parity error is detected. The minimum duration of PERR# is one clock for each data phase that a data parity error is detected. (If sequential data phases each have a data parity error, the PERR# signal will be asserted for more than a single clock.) PERR# must be driven high for one clock before being tri-stated as with all sustained tri-state signals. There are no special conditions when a data parity error may be lost or when reporting of an error may be delayed. An agent cannot report a PERR# until it has claimed the access by asserting DEVSEL# (for a target) and completed a data phase or is the master of the current transaction.
SERR#	System Error is for reporting address parity errors, data parity errors on the Special Cycle command, or any other system error where the result will be catastrophic. If an agent does not want a non-maskable interrupt (NMI) to be generated, a different reporting mechanism is required. SERR# is pure open drain and is actively driven for a single PCI clock by the agent reporting the error. The assertion of SERR# is synchronous to the clock and meets the setup and hold times of all bused signals. However, the restoring of SERR# to the deasserted state is accomplished by a weak pullup (same value as used for s/t/s) which is provided by the system designer and not by the 64signaling agent or central resource. This pull-up may take two to three clock periods to fully restore SERR#. The agent that reports SERR#s to the operating system does so anytime SERR# is sampled asserted.
INTERRUPT PINS (OPTIONAL).	
Interrupts on PCI are optional and defined as "level sensitive," asserted low (negative true), using open drain output drivers. The assertion and deassertion of INTx# is asynchronous to CLK. A device asserts its INTx# line when requesting attention from its device driver. Once the INTx# signal is asserted, it remains asserted until the device driver clears the pending request. When the request is cleared, the device deasserts its INTx# signal. PCI defines one interrupt line for a single function device and up to four interrupt lines for a multi-function device or connector. For a single function device, only INTA# may be used while the other three interrupt lines have no meaning.	
INTA#	Interrupt A is used to request an interrupt.
INTB#	Interrupt B is used to request an interrupt and only has meaning on a multi-function device.
INTC#	Interrupt C is used to request an interrupt and only has meaning on a multi-function device.
INTD#	Interrupt D is used to request an interrupt and only has meaning on a multi-function device.

## 9 On-board - & Mating Connector Types

The Mating connector(s) / Cable Kits(s) which are fitting the On-board connectors are listed in below table. The highlighted cable kits are included in the “KTQ87 Cable & Driver Kit” PN 826602 / 0200000002. (Different quantity of each cable kit included, depending on the quantity of onboard connectors).

Connector	On-board Connectors		Mating Connectors / Cables	
	Manufacturer	Type no.	Manufacturer	Type no.
CPU_FAN	Foxconn	HF0804E-M2	AMP	1375820-4 (4-pole)

			Kontron	<b>PN 821042 (cable)</b>
FEATURE	PINREX	CH74442V100	Don Connex	A05c-44-B-G-A-1-G
			Kontron	<b>PN 1052-5885 (Cable)</b>

\* USB10/USB11 is located in FRONTPNL connector. Depending on application KT TBD cable kit can be used.

**Note:** In above table, more than one connector can be listed for each type of on-board connector, if they all have same fit, form and function and are approved by Kontron as an alternative. Please notice that standard connectors like DP, PCI, PCIe, miniPCIe, Audio Jack, Ethernet and USB are not included in the list.

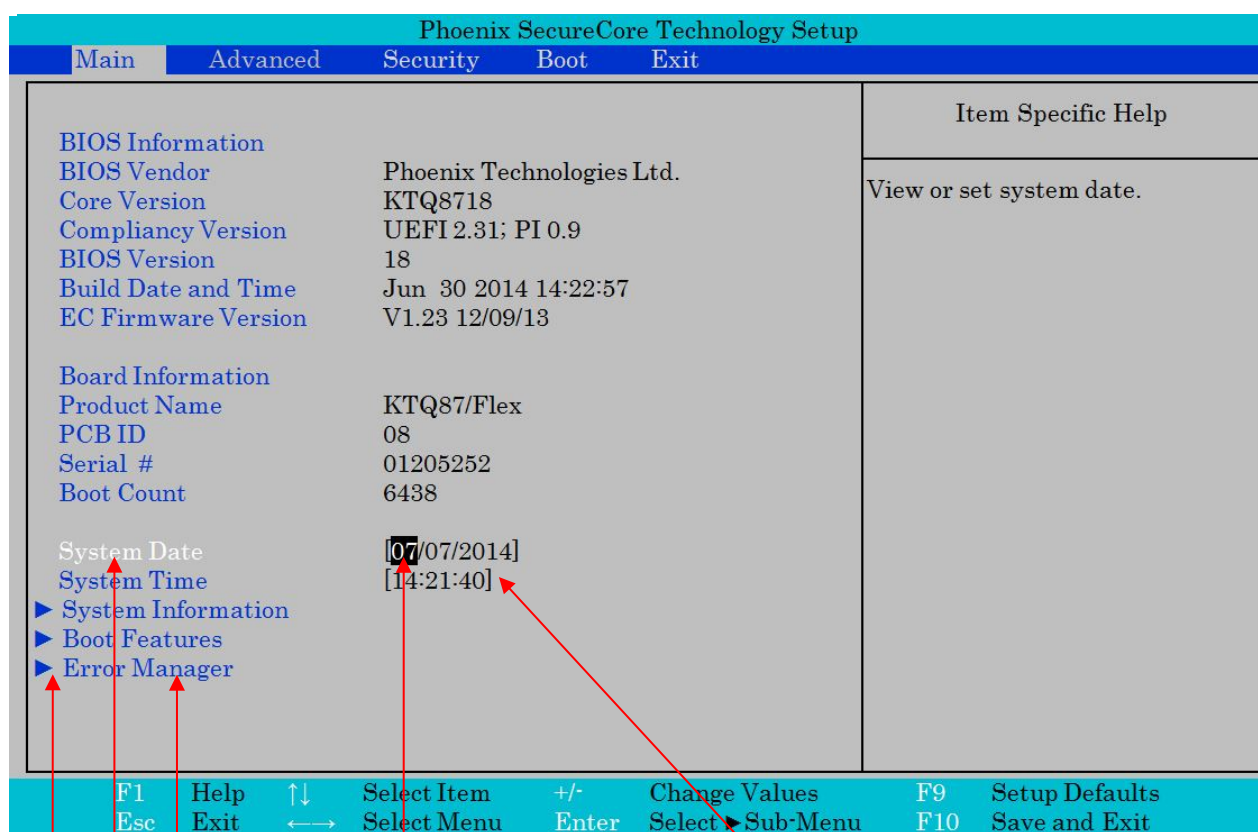

## 10 BIOS

The BIOS Setup is used to view and configure BIOS settings for the board. The BIOS Setup is accessed by pressing the <Del> -key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

The BIOS settings will be loaded automatically when loading "Restore Default" see "Save & Exit" menu. In this Users Guide the default settings are indicated by **bold**. Please notice that "Restore User Defaults" might have different set of default values.

### 10.1 Main

Sub Menu available.

White text for actual selected function which can be modified.

Blue text for functions (not all can be modified).

Black background for actual selection. Black text actual settings.

## Hardware Health Configuration

Phoenix SecureCore Technology Setup	
Advanced	
Hardware Health Configuration	Item Specific Help
<b>Hardware Health Configuration</b>  System Temperature [ 42°C/107°F] System Temperature 2 [ 42°C/107°F] CPU Temperature [ 50.46°C/122°F]  System Fan Speed [ 0 RPM] System Temperature Location <b>[Onboard]</b> Fan Cruise Control [Disabled]  System 2 Fan Speed [ 0 RPM] System Temperature Location [Onboard] Fan Cruise Control [Disabled]  CPU Fan Speed: [ 742 RPM] Fan Cruise Control [Thermal] Fan Settings [50] Fan Min limit [ 0] Fan Max limit [100]  Watchdog Function [ 0]	Use external connected sensor instead of onboard.
F1 Help ↑↓ Select Item +/- Change Values F9 Setup Defaults Esc Exit ←→ Select Menu Enter Select ► Sub-Menu F10 Save and Exit	

Note: *System Temperature* readout is the temperature measured by the selected sensor via *System Temperature Location*. Example, if using same *System Temperature Location* selection for both *System Fan* and *System 2 Fan* then *System Temperature* and *System Temperature2* readout will be identical.

Function	Selection	Description
System Temperature Location	<b>Onboard</b> LM75 @ 0x90 (Note 1)	Use external connected sensor instead of onboard.
Fan Cruise Control (Note 2)	Disabled Thermal Speed	Disabled = Full speed. Thermal: Regulate according to specified °C. Speed: Regulate according to specified RPM.
Fan Settings	30 – 90 (note3) 1000 – 10000 (note4)	
Fan Min limit (Note 5)	0 (note6)	Minimum PWM %, can be used to make sure fan is always active. Make sure Min limit < Max limit.
Fan Max limit (Note 5)	100 (note6)	Maximum PWM %, can be used to limit the fan noise. Make sure Min limit < Max limit.
Watchdog Function	0 - 255 (note7)	0 = Disabled. Enter the service interval in seconds before system will reset.

Note 1: When selecting LM75 @ 0x90 then the *System Temperature* and/or *System Temperature 2* readout will only be valid if the sensor is physically connected to the Feature connector.

Note 2: Three sets of settings (*Fan Cruise Control*, *Fan Settings*, *Fan Min limit*, *Fan Max limit*), one set for *System Fan*, one set for *System 2 Fan* and one set for *CPU Fan*. The *Fan Cruise Control* is by default *Disabled* for *System Fan* and *System 2 Fan* and by default *Thermal* for CPU Fan.

Note 3: °C (if *Fan Cruise Control* is *Thermal*) use either digit keys to enter value or +/- keys to increase/decrease value. Don't use mix of digit keys and +/- keys.

Note 4: RPM (if *Fan Cruise Control* is *Speed*) use either digit keys to enter value or +/- keys to increase/decrease value by 100. Don't use mix of digit keys and +/- keys.

Note 5: Only visible if *Fan Cruise Control* is *Thermal*.

Note6: Use number keys to enter value.

Note 7: Seconds, use digit keys to enter value. Value 0 means Watchdog is disabled. Refer to "KT-API-V2 User Manual" to control the Watchdog via API or refer to "KT-API-V2 User Manual DLL" how to control Watchdog via Windows DLL.
