1.0 General Information

Α ΜΛGΜΛΝ

The Magman Electronic Explosives Inventory System consists of two separate components :

- Part 1.Website which controls the Magman system, stores and backs up the system
database, allows the generation of inventory reports, controls the deployment of
inventory items, personnel and locations onto the tablet.
- **Part 2.** Tablet which is a simple visual inventory control system designed for operators to record transactions, complete stock takes and check running inventory levels.

Part 1 of this manual addresses the Magman website

2.0 Magman Youtube Channel and Contact details

Magman has a Youtube Channel with a variety of training videos. Search for Youtube Magman or enter the following link into your web browser.<u>https://www.youtube.com/channel/UCeuonp1a9wU5pGGqChx9GeQ</u>

For enquiries, the Magman team can be contacted at <u>help@magman.net.au</u> or Ph 1300 624 626.

Part 1 Magman Explosives Inventory Web

NOTE: Depending on the security levels set for your magazine, the screen images below may differ.

3.0 Magman Web System

Website : <u>https://XXXX</u> The file path is provided with your system set up.

3.1 Software Specifics

The Magman software uses the Windows 10 platform in conjunction with Microsoft's Azure Database hosted on the east coast of Australia. Magman web hosted on a secure https:// web site.

The program language for Magman II is - Type.script (Java Script) and Asp.net.core (Backend web)

It is recommended that clients establish a regular back up process to ensure compliance with their own internal governance requirements.

3.2 System Security Levels

Α ΜΛGΜΛΝ

The security levels are set up on the web, prior to dispatch of the system to site.

The security levels can be set to allow personnel to have access to the tablet, the web or both.

The functionality which is available through the security settings include:

- Managing the addition of Magman Users and assignment to the pre-determined security levels.
- Manage the inventory on the system through the addition / removal of inventory items in each magazine.
- Allowing the re-set of personal details.
- Addition of inventory items from the global inventory list.
- Establish customised reporting templates.
- Establish customisable definable fields or questions for users to provide specific data.

The data captured in the system for each transaction includes:

- Date
- Time
- User
- Inventory movement
- Location for the items

3.3 Magman Web Hierarchy

Figure 1. Magman II Hierarchy

The Magman II system is set up with hierarchical levels to allow the control of security levels. The hierarchy allows companies to customise the security levels assigned to the personnel within their business.

Figure 2. Example of Magman II Hierarchy

The hierarchy levels are important for the client administrators to understand.

It is also important to understand the definition of the systems:

Users – person assigned to add / remove items on the tablet and/or the web browser.

Contact – A person who is contacted in relation to the magazine licensing or in case of an emergency.

4.0 Basics functionality of the Magman System

Below is an outline of the basic functionality available on the web browser.

4.1 Adding a User to the Magman system

On the main screen of the Web browser <u>https://XXXX/Login</u>, you will have access to the Icon "User Management". This Icon allows you to add new users into the system.

Figure 4. Client web screen

Figure 5. Add User Button

MagMan User Details	
Туре	Both

Confirm password	
Time zone	(UTC+10:00) Brisbane 🔻
Is Active	4

Figure 6. User set up

NOTE:

Most operators will only require access to the tablet in the "Type" drop down box. System administrators will generally only require access to the Web

Populate the relevant fields Note: If a person is to operate at an Admin level they will require a unique email address to be added to the system. (The is driven by selecting Tablet / web or both)

CAUTION: The password must contain a minimum of 6 characters

Figure 7. Assigning user to a group

Select the relevant group for the individual. This will provide them with the level of access / security rights they have available to them.

Users need to be assigned to the "Site" and then the "Magazine" before they will appear on the tablet once synched

4.2 Assigning a user to the Site

To assign the individual to the operator, client, select the Clients.

4.3 Assigning a user to the Magazine

To assign a user to the Magazine, select the magazine which you want to add the person to. (Refer to the following screens).

Figure 11. Assigning the user to the Magazine

Select the pencil Icon on the Magazine screen.

MagMan Magazine Details			Administration -	1 John Peters -
Lock save add location device				
Description	DGM Surface Mag			
Details Options Locations Visible In Magazine	Associated People User Access	Associated Files		
Name		Email		Can Access
APeter Tester		Tablet User		•
John Peters		john.peters@bigpond.com		-
John Smith		Magman@magman.com.au		
Johnny Advance Admin		Admin_Advanced@bigpond.com		1
Luke Smith		Tablet User		
Peter Flower		rcbedg@netspace.neLau2		-

Check the box adjacent to the User you want selected for that magazine.

Once the tablet is synced, the User's name will appear on the tablet.

If you have security restrictions which don't allow you to complete the above process contact your site Magman Administrator or Email <u>help@magman.net.au</u>

5.0 Adding locations to the tablet

There are two ways of entering locations to the Magman system :

- 1. Upload bulk locations,
- 2. Upload individual locations.

5.1 Adding Single Locations

In the Magazine screen on the web, Select the "Locations" tab (refer above on how to navigate to this screen)

MagMan Magazine Details	Administration -	L John Peters -	
Image: back Image: back Image: back Image: back Image: back			
Description DGM Surface Mag

Desription	⊽ so ⊽ a	ctive	
12L Junk		True 0	
16L Bomb Bay		True 0	

Figure 14. Add a single location

Simply select the icon and type in the name of the location and Save.

5.2 Adding Multiple Locations

To add multiple locations follow the instructions below:

The multiple addition of locations is done through the use of an excel template. The easiest way to do this is to maintain the excel template to update locations as required.

Select the export Locations tab.

No.

Figure 16. Multiple location upload template

To add locations, add additional rows into the excel template, completing each of the columns.

Once completed, simply use the "Locations Import" and select the excel template file you have just populated.

You will receive the following screen confirming the imported locations.

Figure 17. Confirmation of the uploads

6.0 Adding inventory items to a magazine.

The Magman system contains a database of standard explosive inventory items which can be downloaded into individual magazines.

Select "Inventory Item Management" from the Web screen.

Figure 18. Uploading new inventory items to the magazine

A screen will appear which shows your current inventory items. These items are specific to your magazine/s.

To load additional items. Select

Once the tablet is synced the production blast will be available on the tablet for the operators to select.

Part 2 Magman Explosives Inventory Tablet

8.0 Magman Tablet - Getac F110 Intrinsically Safe Tablet

The Magman Mining Software – Explosives Stock control system is supplied on a Getac F110 tough intrinsically safe tablet.

The tablets have undergone RF/EM testing in a NATA accredited laboratory, to quantify the frequencies emitted from the tablet. The tablets do not emit any intentional emissions such as Bluetooth, WIFI, 3G, 4G, etc.

The Getac tablets comply to United States Military Standard 810, which provides certification that the tablet can withstand duty under harsh / extreme conditions.

The test reports and tablet certificates are available to clients to complete their own site risk assessment.

For further details, refer to the Getac Operators manual supplied with the tablet.

8.1 Battery.

The below indicators identify the charge levels of the tablet. *Note : The Getac F110 ATEC have the batteries screw in place so they cannot unintentionally be removed.*

Ref	Component	Description			
0	Indicators				
	() Power	Lights blue when the power is on.			
		Blinks blue when the system is in Sleep mode.			
	⊟∰ Battery	Lights amber when the battery is being charged.			
	Charge	Lights green when battery charging is completed.			
		Blinks green to indicate the battery's built-in high temperature protection mechanism is activated. CAUTION: Do not remove the battery during this period.			
		Blinks red (once per second) when the battery's capacity is below 10%.			
		Blinks red rapidly (once per 0.5 second) when there is a thermal protection problem. Ask for repair service in case this happens.			
		Blinks amber when the battery charging is in an abnormal state. Replace the battery in case this happens.			

Figure 26 Battery indicator on the tablet

8.2 Synching the Magman Tablet

The Magman tablet must be sync'ed to the cloud for the information to be uploaded to the cloud and download any changes which have been made in the cloud.

It is recommend that you sync the tablet on a daily basis.

The last sync date appears on the bottom left hand corner of the tablet.

8.3 Connecting the tablet to the internet.

As there is no WIFI or 3G/4G capabilities on the tablet, it needs to be plugged into the internet using the supplied connector. Plug the USB/Ethernet adaptor into an active Ethernet (Blue Cat5 Computer cable) and the USB port on the upper left hand side of the tablet (Under the lockable flap).

Figure 27 USB Port on the Getac F110

Once logged into the tablet, Internet Online wording appears in the lower right hand corner of the screen, indicating the tablet is ready to be sync'ed.

Figure 28 Ensure the tablet "Internet Online" indicator is on prior to syncing the tablet

8.4 Sync

Once logged in, tap the "Sync" icon. The sync routine will scroll down the screen.

Check the sync process progresses through to the "Sync Complete". If not, contact your site Magman Administrator or email <u>help@magman.net.au</u>

8.5 Tablet Keyboard

The keyboard on the tablet should automatically pop up whenever text is required to be entered into the system.

If the keyboard doesn't automatically pop up, the button on the side of the tablet with three horizontal dots will force the keyboard to appear.

Figure 29. Getac tablet keyboard button

8.6 Web Magazine transactions

If, for any reason the tablet is unserviceable, transactions can be entered directly into the Magman web browser.

9.0 Tablet Transactions

9.1 Take / Return from the Magazine

Figure 30. Magman Tablet Menu

To remove product from the magazine, simple tap on the Icon. The product list will appear. Select the quantity of each item to be removed from the magazine.
