THX Modes carefully optimize the tonal and spatial characteristics of the soundtrack for reproduction in the home-theater environment. They can be used with 2-channel matrixed and multichannel sources. Back speaker output depends on the source material and the selected listening mode.

- The THX mode can finely adjust the acoustic and spatial characteristics of the soundtrack for the best reproduction of home theater sound. It will work on 2 ch source and multichannel source. Back speaker sound will differ depending on the source and selected listening mode.
- **THX Cinema:** THX Cinema mode corrects theatrical soundtracks for playback in a home theater environment. In this mode, THX Loudness Plus is configured for cinema levels and Re-EQ, Timbre Matching, and Adaptive Decorrelation are active.

In this mode, THX ASA processing blends the side surround speakers and back surround speakers providing the optimal mix of ambient and directional surround sounds.
- **THX U2 Games (THX Ultra2 Games):** For the replay of multichannel game audio, the THX Ultra2 Games mode should be selected. In this mode, THX ASA processing is applied to the surround channels of all 5.1 encoded game sources such as PCM, DTS, and Dolby Digital. This accurately places all game audio surround information creating a full 360 degree playback environment.

THX Ultra2 Games is unique as it gives you a smooth transition of audio in all points of the surround field.

- **THX U2 Music (THX Ultra2 Music)** : For the replay of multichannel music, the THX Ultra2 Music should be selected. ### Dialogue Normalization

Dialogue Normalization (DialogNorm) is a feature of Dolby Digital, which is used to keep the programs at the same average listening level so the user does not have to change the volume control between Dolby Digital, Dolby Digital Plus and Dolby TrueHD programs. When playing back software which has been encoded in Dolby Digital, Dolby Digital Plus and Dolby TrueHD, sometimes you may see a brief message in the front panel display which will read "DialogNorm: X dB" (X being a numeric value). The display is showing how the program level relates with THX calibration level. If you want to play the program at calibrated theatrical levels, you may wish to adjust the volume. For example, if you see the following message: "DialogNorm: + 4 dB" in the front panel display, to keep the overall output level at THX calibrated loudness, just turn down the volume control by 4dB. However, unlike a movie theater where the playback loudness is preset, you can choose your preferred volume setting for best enjoyment.

### THX Cinema Processing

THX is an exclusive set of standards and technologies established by the world-renowned film production company Lucasfilm Ltd. THX grew from George Lucas' personal desire to make your experience of the film soundtrack in both movie theaters and in your home theater as faithful as possible to what the director intended. Movie soundtracks are mixed in special environments called dubbing stages and are designed to be played back in movie theaters

with similar equipment and conditions. Most of those soundtracks are remixed using flat response loudspeakers similar to those used in the small home theater environment before being transferred onto Blu-ray Discs, DVD, etc. THX engineers developed patented technologies to accurately translate the sound from the movie theater environment into the home, correcting the tonal and spatial errors that occur. On this product, when the THX indicator is on, THX features are automatically added in Cinema modes (e.g. THX Cinema, THX Surround EX).

### **Timbre Matching**

The human ear changes our perception of a sound depending on the direction from which the sound is coming. In a movie theater, there is an array of surround speakers so that the surround information is all around you. In a home theater, you may only have two speakers located to the side of your head. In this case, the Timbre Matching feature filters the information going to the surround speakers so that they more closely match the tonal characteristics of the sound coming from the front speakers. This ensures seamless panning between the front and surround speakers.

### **Adaptive Decorrelation**

In a movie theater, a large number of surround speakers help create an enveloping surround sound experience. If a home theater only has two sidewall surround speakers, the surround speakers may sound similar to headphones lacking spaciousness and envelopment. Surround sounds will also collapse toward the closet speaker as you move away from the middle seating position. Adaptive Decorrelation slightly changes one surround channel's time and phase relationship with respect to the other surround experience as in a movie theater using only two speakers.

### **ASA (Advanced Speaker Array)**

ASA is a proprietary THX technology which processes the audio on the two side and two back surround speakers for the optional surround sound experience. When you set up your home theater system using eight speaker outputs (Left, Center, Right, Surround Right, Back Right, Back Left, Surround Left, and Subwoofer), be sure to go to the THX Audio Setup screen and choose the setting that closely corresponds to the back speaker spacing. This will reoptimize the surround sound field. ASA is used in three modes: THX Ultra2 Cinema, THX Ultra2 Music and THX Ultra2 Games.

## Using the Listening Modes

#### ■ Future listening mode update

A future firmware update is planned to enable the unit to support playback in DTS:X audio format. For this reason, the available listening modes will vary depending on the firmware version.

With THX Loudness Plus, home theater audiences can now experience the rich details in a surround mix at any volume level.

A consequence of turning the volume below Reference Level is that certain sound elements can be lost or perceived differently by the listener. THX Loudness Plus compensates for the tonal and spatial shifts that occur when the volume is reduced by intelligently adjusting ambient surround channel levels and frequency response. This enables users experience the true impact of soundtracks regardless of the volume setting. THX Loudness Plus is automatically applied when listening in any THX listening mode. The new THX Cinema, THX Music, and THX Games modes are tailored to apply the proper THX Loudness Plus settings for each type of content.

Connecting an Onkyo component with RI jack such as the separately sold RI Dock to the unit by using an RI cable and an analog audio cable enables the following RI functions:

**System On / Auto Power On:** Starting playback on a component connected via RI when the unit is on standby mode, automatically turns on the unit to select the relevant component as its input source.

**Direct Change:** When playback is started on a component connected via RI, the unit selects that component as the input source.

**Remote Controller Operation:** Allows you to operate RI-compatible Onkyo components using this unit's remote controller. Point the remote controller at remote control sensor of the unit. This operation is possible only when the RI remote control code is programmed.

- Some components may not support all RI functions.
- These functions do not work when Zone 2/Zone 3 is turned on.
- For information on the RI functions, also refer to each component's instruction manual.

## Connecting and Operating Onkyo RI Components

### RI Connection and Setting

Connect an Onkyo component with RI jack to this unit using an RI cable and an analog audio cable. For details, refer to the instruction manual of the component with RI jack. The RI cable can be connected in any order. When there are two RI jacks, both jacks work in the same way and are interchangeable.

To connect the RI Dock or cassette tape deck via RI, the following settings are required.

#### ■ Rename the input selector

To make the RI functions work, you must rename the input selectors on the unit. Press CD or Game 1 on the main unit to display "CD" or "GAME1" on the main unit display. Then press and hold CD or Game 1 on the main unit 3 seconds or more to switch the display to "DOCK" or "TAPE".

#### ■ To program the RI remote control code

Program the remote control code to any Remote Mode button on the remote controller. This will allow you to operate the component by pointing the remote controller at the unit instead of the component.

1. Press and hold Display for 3 or more seconds while holding down the Remote Mode button to which you want to program the remote control code.
  - The remote indicator will light.
  - The RCV, Zone2 and Zone3 buttons cannot be programmed.

2. With the number buttons, enter the following 5-digit remote control code within 30 seconds.

RI Dock: 81993

Cassette tape deck with RI jack: 42157

- Programming is complete when the remote indicator flashes twice. The remote indicator flashes once slowly when programming the remote control code fails. Try programming again.

**Input selector on the RI Dock:** Switch to "DOCK" or "TAPE". For details, refer to the RI Dock's instruction manual.

To operate Onkyo components directly or Onkyo components that are not connected via RI, use the following remote control codes:

Onkyo DVD player: 30627

Onkyo CD player: 71817

RI Dock: 82990

- With some models, operation may be not possible in part or not possible at all.

## Connecting and Operating Onkyo RI Components

### iPod®/iPhone® Operation

The RI Dock allows you to use this unit's remote controller to operate and play music on your iPod/iPhone. Moreover, it also allows you to view videos on your iPod/iPhone on the screen of your TV, as well as perform RI operations if connected via RI. This operation is possible only when the RI remote control code is programmed.

**Before performing any operation:** Make sure the OS for your iPod/iPhone is updated to the latest version. Certain buttons may not work for some iPod/iPhone models and generations, or RI Dock. For details on the operation, refer to the RI Dock's instruction manual.

Switch the remote controller mode by pressing the Remote Mode button programmed with the remote control code for the iPod/iPhone, and operate by using the corresponding buttons. Point the remote controller at the unit.

## Control Function between the Unit and External Component

You can enable the control functions between the unit and external devices using the terminals below. Special devices or cable connections are necessary to enable the functions. For more information about preparation, contact the specialized stores.

### ■ RS232 port

Use the port for connection with a commercially available integrated control system that can enable home automation. Some integrated control systems provide a centralized operation with a single touch panel controller in order to control audio and video home appliances and security devices together. For more information about adopting an integrated control system, contact the specialized stores.

### ■ IR jack

If you use a multiroom remote control kit with this jack, you can operate the unit with the remote controller even when you are in a separate room, or operate the unit with the remote controller even if its remote control sensor is difficult to see. You can also connect a device with the unit and operate it with the remote controller. For more information about adopting a multiroom remote control kit, contact the specialized stores.

### ■ 12V trigger output jack

You can enable power link operation when you connect the unit and an external device such as power amplifier equipped with 12V input jack. When the desired input is selected on the unit, power link operation will be activated with a control signal of maximum 12 V/100 mA from the 12V TRIGGER OUT A jack or maximum 12 V/25 mA when using the 12V TRIGGER OUT B or C jack. You can select the zone to output the control signal by setting each of the inputs. For connection, use a monaural mini plug cable.

## ■ If an Error Message is Displayed

When an error occurs, "\* - \* \* Error!" is displayed on the unit. ("\*" represents an alphanumeric character.) Check the following:

### Error Code

- **\* -01, \* -10:**  
USB storage device not found. Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.  
Connect the USB storage device to an external power source if it has its own power supply.
- **\* -05, \* -13, \* -20, \* -21:**  
The firmware file is not present in the root folder of the USB storage device, or the firmware file is for another model. Retry from the download of the firmware file.
- **Others:**  
First disconnect then reconnect the AC power cord, and then retry from the beginning.

### Before starting the procedure

Problems may be solved by simply turning the power on/off or disconnecting/connecting the power cord, which is easier than working on the connection, setting and operating procedure. Try the simple measures on both the unit and the connected device. If the problem is that the video or audio is not output or the HDMI linked operation does not work, disconnecting/connecting the HDMI cable may solve it. When reconnecting, be careful not to wind the HDMI cable since if wound the HDMI cable may not fit well. After reconnecting, turn off and on the unit and the connected device.

- This unit contains a microPC for signal processing and control functions. In very rare situations, severe interference, noise from an external source, or static electricity may cause it to lockup. In the unlikely event that this happens, unplug the power cord from the wall outlet, wait at least 5 seconds, and then plug it back in.
- Onkyo is not responsible for damages (such as CD rental fees) due to unsuccessful recordings caused by the unit's malfunction. Before you record important data, make sure that the material will be recorded correctly.

## Resetting the unit

Resetting the unit to the status at the time of shipment may solve the problem. If the measures mentioned in the troubleshooting do not solve the problem, reset the unit with the following procedure. If you reset the unit status, your preferences will be reset to the defaults. Note them down before starting reset.

### ■ How to reset

1. While holding down CBL on the main unit (note that step 2 must be performed with this button pressed down)
2. Press  On/Standby on the main unit. "Clear" is appeared on the display and the unit will enter standby mode.

### ■ How to reset the remote controller

1. While holding down ① RCV on the remote controller (note that step 2 must be performed with this button pressed down)
2. Press and hold ② Q for 3 or more seconds until the ③ remote indicator stays lit. Within 30 seconds, press ① RCV again.

### Power

■ Cannot turn on the unit

- Make sure that the power cord is properly plugged into the wall outlet.
- Unplug the power cord from the wall outlet, wait 5 seconds or more, then plug it in again.

■ The unit turns off unexpectedly

- This unit will automatically enter standby mode when Auto Standby or Sleep Timer is set and launched.

**WARNING:** If smoke, smell or abnormal noise is produced by the unit, unplug the power cord from the wall outlet immediately and contact the dealer or your Support.

### Audio

- Make sure that the speaker setup microphone is not still connected.
- Check that the output jack of the connected equipment and the input jack of this unit are connected correctly.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- If the MUTING indicator on the display flashes, press Muting on the remote controller to unmute the unit.
- While headphones are connected to the Phones jack, no sound is output from the speakers.
- If "Audio Select" - "PCM Fixed Mode" is set to "On", set it to "Off".
- Make sure the power amplifier connected to this unit is turned on.

If the above does not solve the problem, check the following.

- There is no sound from the television
- There is no sound from the connected player
- One of the speakers produces no sound
- Only the front speakers produce sound
- Only the center speaker produces sound
- The surround speakers produce no sound
- The center speaker produces no sound
- No sound from the back speakers and height speakers
- The subwoofer produces no sound
- Volume is low
- There is no sound from a connected turntable
- Noise can be heard
- The sound changes when I connect my headphones
- About DTS signals
- The beginning of audio received by an HDMI IN cannot be heard
- The volume has suddenly dropped
- Cannot increase volume when playing AirPlay, Spotify, or DLNA

## Troubleshooting

- There is no sound from the television
- The input selector of this unit needs to be in the position that corresponds to the jack where the television is connected.
- If your TV does not support ARC, you need, in addition to the HDMI OUT jack connection, a digital optical cable connection between the digital audio out optical jack of the TV and the DIGITAL IN OPTICAL jack of the unit or an analog audio cable connection between the audio output jack of the TV and the AUDIO IN TV jack of the unit.

## Troubleshooting

- There is no sound from the connected player
  - The input selector of this unit needs to be in the position that corresponds to the jack where the player is connected.
  - Check the digital audio output setting on the connected component. On some game consoles, such as those that support DVD, the default setting is off.
  - With some DVD-Video discs, you need to select an audio output format from a menu.

## Troubleshooting

- One of the speakers produces no sound
  - Make sure the speakers are configured correctly.

## Troubleshooting

- Only the front speakers produce sound
- When the Stereo or Mono listening mode is selected, only the front speakers and subwoofer produce sound.

## Troubleshooting

- Only the center speaker produces sound
  - If you use the Dolby Surround listening mode with a mono source, such as an AM radio station or mono TV program, the sound is concentrated in the center speaker.

## Troubleshooting

- The surround speakers produce no sound
  - When the T-D (Theater-Dimensional), Stereo or Mono listening mode is selected, the surround speakers produce no sound.
  - Depending on the source and current listening mode, not much sound may be produced by the surround speakers. Try selecting another listening mode.

## Troubleshooting

- The center speaker produces no sound
  - When the Stereo or Mono listening mode is selected, the center speaker produces no sound.

## Troubleshooting

- No sound from the back speakers and height speakers
  - Depending on the source and current listening mode, not much sound may be produced by the speakers. Try selecting another listening mode.

## Troubleshooting

- The subwoofer produces no sound
  - When the input signal does not include a subwoofer audio element (LFE), the subwoofer may not produce sound.

## Troubleshooting

- Volume is low
  - Check the volume. The volume level is adjustable between Min, 0.5 to 99.5, Max (100). A level of around 60 is normal in a domestic environment.

## Troubleshooting

- There is no sound from a connected turntable
  - If your turntable uses an MC cartridge, you must connect an audio equalizer and either an MC head amp or an MC transformer.

## Troubleshooting

- Noise can be heard
  - Using cable ties to bundle audio cables with power cords, speaker cables, etc. may degrade the audio performance, so refrain from doing it.
  - An audio cable may be picking up interference. Try repositioning your cables.

## Troubleshooting

- The sound changes when I connect my headphones
  - When a listening mode other than Direct or Mono is selected, connecting a headphone automatically selects Stereo.

### ■ About DTS signals

- When DTS program material ends and the DTS bitstream stops, the unit remains in DTS listening mode and the dts indicator remains on. This is to prevent noise when you use the pause, fast forward, or fast reverse function on your player. If you switch your player from DTS to PCM, you may not hear any sound because the unit does not switch formats immediately. In such case, you should stop your player for about 3 or more seconds and then resume playback.
- With some CD and LD players, you will not be able to playback DTS material properly even though your player is connected to a digital input on the unit. This is usually because the DTS bitstream has been processed (e.g., output level, sampling rate, or frequency response changed) and the unit does not recognize it as a genuine DTS signal. In such cases, you may hear noise.
- When playing DTS program material, using the pause, fast forward, or fast reverse function on your player may produce a short audible noise. This is not a malfunction.

## Troubleshooting

- The beginning of audio received by an HDMI IN cannot be heard
  - Since it takes longer to identify the format of an HDMI signal than it does for other digital audio signals, audio output may not start immediately.

## Troubleshooting

- The volume has suddenly dropped
  - If this unit is used for a long time even after the internal temperature of this unit exceeds a certain threshold, the volume may be lowered automatically to protect the circuitry.

## Troubleshooting

- Cannot increase volume when playing AirPlay, Spotify, or DLNA
  - You can set the upper limit for the volume in "WEB Setup". After pressing the RCV button on the remote controller, press the Setup button, select "6. Hardware" - "Network" - "IP Address" to display the IP address. After connecting the unit and your PC or smartphone to the same router, open the browser, enter the IP address of the unit in the URL field to display the "WEB Setup" screen. Change the value for "Max Volume" in "WEB Setup" and click "Save".

### Listening Mode

- When listening to Dolby Digital and/or DTS sound, digital connection is necessary.
- Check the digital audio output setting on the connected component. On some game consoles, such as those that support DVD, the default setting is off.
- After pressing RCV on the remote controller, repeatedly press Display to switch the display on the main unit. You can see the input format.

If the above does not solve the problem, check the following.

- [Cannot select a desired listening mode](#)
- [There is no sound with Dolby Atmos](#)

## Troubleshooting

- Cannot select a desired listening mode
  - Depending on the connecting status of the speaker, some listening modes may not be selected. Check the details in "Selectable Listening Modes" section.

## Troubleshooting

- There is no sound with Dolby Atmos
  - You need to have either back speakers or height speakers connected. After connecting each of the speakers, make sure the connection settings in "Configuration" - "Speaker Channels" are correct.
  - Dolby Atmos play is only possible when the input signal is Dolby Atmos.

### Video

- Check that the output jack of the connected equipment and the input jack of this unit are connected correctly.
- Make sure that none of the connecting cables are bent, twisted, or damaged.
- Make sure the switching of input screens is proper at the monitor side such as a TV.

If the above does not solve the problem, check the following.

- There is no picture from a source connected to an HDMI IN
- There is no picture from a source connected to the composite video/component video input jack
- Images flicker

## Troubleshooting

- There is no picture from a source connected to an HDMI IN
  - The input selector of this unit needs to be in the position that corresponds to the jack where the player is connected.
  - Check if "Resolution Error" is displayed on the main unit display when video input via HDMI IN jack is not displayed. In this case, the TV does not support the resolution of the video input from the player. Change the setting on the player.
  - Reliable operation with an HDMI-to-DVI adapter is not guaranteed. In addition, video signals from a PC are not supported.
  - Try switching off the Deep Color function. To turn off the Deep Color function, while holding down STM on the main unit, press  On/Standby repeatedly until "Deep Color:Off" appears on the display. To reactivate the Deep Color function, repeat the above described step until "Deep Color:On" is appeared on the display.

## Troubleshooting

- There is no picture from a source connected to the composite video/component video input jack
- If multiple videos are input into one input system, HDMI signal output is prioritized. In this case, to output composite video/component video, set "HDMI Input" to "-----".

## Troubleshooting

### ■ Images flicker

- It is possible that the resolution of the player is not compatible with the TV's resolution. If you have connected the player to this unit with an HDMI cable, try changing the output resolution on the player. There also may be an improvement if you change the screen mode on the TV.

### Linked operation

- There is no HDMI linked operation with CEC-compliant equipment such as a television
  - Set the HDMI CEC (RIHD) setting of the unit to On. Press RCV and then Setup on the remote controller, select "6. Hardware" - "HDMI" - "HDMI CEC (RIHD)" and set to On.
  - It is also necessary to make the HDMI linked system settings on the CEC-compliant equipment. Check the operating instructions.
- The RI functions do not work
  - To use RI, you must make an RI connection and an analog audio connection (RCA) between the component and this unit.
  - While Zone 2/Zone 3 is selected, the RI functions do not work.

### Tuner

- Reception is noisy, FM stereo reception is noisy, or the "FM STEREO" indicator does not stay lit
  - Re-check the antenna connection.
  - Relocate your antenna.
  - Move the unit away from your TV or PC.
  - Passing cars and airplanes can cause interference.
  - Concrete walls weaken radio signals.
  - Listen to the station in mono.
  - When listening to an AM station, operating the remote controller may cause noise.

### Network function

- Network services become selectable after the network starts up even if they cannot be selected first. It may take about a minute to start up.
- When NET is blinking, this unit is not properly connected to the home network.
- Try unplugging the power supply of this unit and the router, and then plugging in again. Try rebooting the router.

If the above does not solve the problem, check the following.

- [Cannot access the Internet radio](#)
- [Cannot access the network server](#)
- [Playback stops while listening to music files on the network server](#)

## Troubleshooting

- Cannot access the Internet radio
  - Certain network service or contents available through the unit may not be accessible in case the service provider terminates its service.
  - Make sure that your modem and router are properly connected, and make sure they are both turned on.
  - Make sure that the router LAN side port is properly connected to this unit.
  - Make sure that connecting to Internet from other components is possible. If connecting is not possible, turn off all components connected to the network, wait for a while, and then turn on the components again.
  - If a specific radio station is unavailable for listening, make sure the registered URL is correct, or whether the format distributed from the radio station is supported by this unit.
  - Depending on ISP, setting the proxy server is necessary.
  - Make sure that the used router and/or modem is supported by your ISP.

## Troubleshooting

- Cannot access the network server
  - This unit needs to be connected to the same router as the network server.
  - Make sure your network server has been started up.
  - Make sure your network server is properly connected to the home network.
  - Make sure your network server is correctly set.
  - Make sure that the router LAN side port is properly connected to this unit.

## Troubleshooting

- Playback stops while listening to music files on the network server
  - Make sure the network server is compatible with this unit.
  - When the PC is serving as the network server, try quitting any application software other than the server software (Windows Media® Player 12 etc.).
  - If the PC is downloading or copying large files, the playback may be interrupted.

### USB storage device

- USB storage device is not displayed
  - Check whether the USB storage device or USB cable is correctly inserted to the USB port of the unit.
  - Remove the USB storage device from this unit once, and then try re-connecting.
  - Performance of the hard disk that receive power from the USB port of the unit is not guaranteed.
  - Depending on the type of format, the playback may not be performed normally. Check the type of the file formats that is supported.
  - This unit supports FAT16 and FAT32 file system formats for USB storage devices.
  - USB storage devices with security functions may not be played.

### Multi-zone Function

- There is no zone output from the connected player
- When outputting audio from an external player, in Zone 2, you can play equipment connected to any of the HDMI IN1 to IN5 jacks, DIGITAL IN COAXIAL/OPTICAL jacks, AUDIO IN jacks, or INPUT BALANCE L/R jacks. Note that only analog or 2-channel PCM audio signals can be played and that some players require audio output setting. Only players connected to the AUDIO IN jacks or INPUT BALANCE L/R jacks by analog connection can be played in Zone 3.
- When the NET input source is selected, DSD and Dolby TrueHD audio signals cannot be output to Zone 2/Zone 3.

### Remote Controller

- Make sure that the batteries are installed with the correct polarity.
- Install new batteries. Do not mix different types of batteries, or old and new batteries.
- Make sure that the remote controller is not too far away from the unit, and that there is no obstruction between the remote controller and the remote control sensor of the unit.
- Make sure that the unit is not subjected to direct sunshine or inverter-type fluorescent lights. Relocate if necessary.
- If the unit is installed in a rack or cabinet with colored-glass doors or if the doors are closed, the remote controller may not work reliably.

If the above does not solve the problem, check the following.

- The remote controller does not work
- Operating other Onkyo component by using a RI remote control code is not available
- Cannot operate Integra/Onkyo components (ones without RI connection) and components of other makers

## Troubleshooting

- The remote controller does not work
  - Before operating this unit with the remote controller, be sure to press RCV.

## Troubleshooting

- Operating other Onkyo component by using a RI remote control code is not available
- Make sure that the Onkyo component is properly connected with RI cable. When RI cable is used for connection, make sure to connect analog audio cable as well. (Connecting only an RI cable will not be enough.)
- Make sure you have selected the correct remote controller mode.
- When the RI remote control code is input, point the remote controller at remote control sensor of the unit.
- Make sure that the input display is correctly set.
- Input the RI remote control code again.

## Troubleshooting

- Cannot operate Integra/Onkyo components (ones without RI connection) and components of other makers
- Operate the remote controller by setting toward the light receiving section of each component.
- When using the remote controller to control other manufacturers' AV components, some buttons may not work as expected. Also, some components may not operate at all.
- Make sure you have selected the correct remote controller mode.
- Make sure you have entered the correct remote control code.
- Make sure to set the same ID on both the unit and remote controller.
- Input a correct remote control code again. If there are several codes, try each code.

### Display and OSD

#### ■ The display does not light

- Make sure that Dimmer function is not working. Press Dimmer button and change the brightness level of the display.

#### ■ The on-screen menus do not appear

- On your TV, make sure that the video input to which this unit is connected is selected.
- Set "TV Out" - "Impose OSD" to "On".
- The guidance displayed on the TV screen (OSD) are not displayed when the OSD language is set to Chinese if the input selector is "NET". Operate by confirming the display on the main unit. Note that the display on the main unit does not support the display of Chinese characters. Characters that cannot be displayed are replaced with asterisks (\*).

### RI Dock

- Make sure the unit is turned on, the correct input source is selected, and the volume is turned up.
- Make sure cord and cable plugs are properly plugged in.
- Make sure your iPod/iPhone is properly inserted in the Dock. If your iPod/iPhone is in a case, it may not connect properly to the Dock. Always remove your iPod/iPhone from the case before inserting it into the Dock. Try reconnecting your iPod/iPhone.
- Make sure your iPod/iPhone is actually playing.

If the above does not solve the problem, check the following.

- There is no sound
- There is no video
- This unit's remote controller does not control your iPod/iPhone
- The unit unexpectedly selects your iPod/iPhone as the input source

## Troubleshooting

- There is no sound
  - Try resetting your iPod/iPhone.

## Troubleshooting

- There is no video
  - Make sure the correct input is selected on your TV or the unit.
  - Make sure that your iPod/iPhone model's TV OUT setting is set to On.
  - Some versions of the iPod/iPhone do not output video.

## Troubleshooting

- This unit's remote controller does not control your iPod/iPhone
  - The iPod/iPhone cannot be operated while it is displaying the Apple logo.
  - Make sure you have selected the correct remote controller mode.
  - When you use this unit's remote controller, point it toward this unit.
  - Before operating with the remote controller, you may need to play on your iPod/iPhone to make the input selector be recognized.
  - Depending on your iPod/iPhone model and generation, some buttons may not work as expected.
  - Try resetting your iPod/iPhone.

## Troubleshooting

- The unit unexpectedly selects your iPod/iPhone as the input source
- Always pause iPod/iPhone playback before selecting a different input source. If playback is not paused, the Direct Change function may select your iPod/iPhone as the input source by mistake during the transition between tracks.

### Others

- Strange noises can be heard from the unit
  - If you have connected another unit to the same wall outlet as this unit, this noise may be an effect from the other unit. If the symptoms improve by unplugging the power cord of the other unit, use different wall outlets for this unit and the other unit.
- When performing Automatic Speaker Setup, the measurement fails and the message "Ambient noise is too high." is displayed
  - This can be caused by a malfunction in your speaker unit. Check if the unit produces normal sounds.

### Linked Operation with CEC-compatible Components

Link operation with a product conforming to the CEC of the HDMI standard.  
Note that linked operation is not always guaranteed with all CEC devices.

**Operation has been confirmed on the following devices (as of February 2015).**

TV (Random order):

- Toshiba TV sets
- Sharp TV sets

Players/Recorders (Random order):

- Onkyo and Integra RIHD-compatible players
- Toshiba players and recorders
- Sharp players and recorders (only when used together with Sharp TV sets)

**Caution:** For linking functions to work properly, do not connect more RIHD-compatible components than the quantities specified below, to the HDMI jacks. Linking functions are not guaranteed when more RIHD-compatible components than the below mentioned quantities are connected. Furthermore, do not connect this unit to another AV controller/AV amplifier via HDMI.

- Blu-ray Disc/DVD players: up to 3.
- Blu-ray Disc/DVD recorders: up to 3.
- Cable TV tuner, terrestrial digital tuner, and satellite broadcasting tuner: up to 4 units.

# Checking whether the HDMI Linked Operation Settings Are Enabled

1. Turn on the power of all connected components.
2. Turn off the power of the TV, and confirm that the power of the connected components is turned off automatically with the link operation.
3. Turn on the power of the Blu-ray Disc/DVD player/recorder.
4. Start playback on the Blu-ray Disc/DVD player/recorder, and verify the following:
  - This unit automatically turns on, and selects the input to which the Blu-ray Disc/DVD player/recorder is connected.
  - The TV automatically turns on, and selects the input to which this unit is connected.
5. Following the operating instructions of the TV, select "Use the TV speakers" from the menu screen of the TV, and confirm that the audio is output from the speakers of the TV, and not from the speakers connected to the amplifier receiver.
6. Select "Use the speakers connected to this unit" from the menu screen of the TV, and confirm that the audio is output from the speakers connected to the amplifier, and not from the TV speakers.

### Caution:

- Even if you set to output audio from the TV speakers, audio will be output from the speakers connected to the amplifier when you adjust the volume or switch the input on this unit. To output audio from the TV speakers, redo the corresponding operations on the TV.
- In case of an RIHD connection with RI audio control compatible components, do not connect the RI cable at the same time.
- On the TV, when you select anything other than the HDMI jack to which this unit is connected, the input on this unit will be switched to "TV".
- This unit will automatically power on in conjunction when it determines it to be necessary. Even if this unit is connected to an RIHD compatible TV or player/recorder, it will not power on if it is not necessary. It may not power on in conjunction when the TV is set to output audio from the TV.
- Linked system functions with this unit may not work depending on the component model connected. In such cases, operate this unit directly.
- When the player/recorder cannot be operated with the remote controller of this unit, the corresponding component may not be programmed to support the remote controller operation of CEC. Program the remote control code of the component maker to the remote controller for using.

### About HDMI

HDMI (High-Definition Multimedia Interface) is a digital interface standard for connecting TVs, projectors, Blu-ray Disc/DVD players, set-top boxes, and other video components. Until now, several separate video and audio cables have been required to connect AV components. With HDMI, a single cable can carry control signals, digital video and digital audio (2-channel PCM, multichannel digital audio, and multichannel PCM).

The HDMI video stream (i.e., video signal) is compatible with DVI (Digital Visual Interface) (\* 1), so TVs and displays with a DVI input can be connected by using an HDMI-to-DVI adapter cable. (This may not work with some TVs and displays, resulting in no picture.)

This unit supports HDCP (High-bandwidth Digital Content Protection) (\* 2), so it can display picture only on HDCP-compatible components.

HDMI of the unit supports the following functions.

Audio Return Channel, 3D, x.v.Color, Deep Color, LipSync, 4K (Passthrough)

#### **Audio Formats Supported by The Unit:**

- 2-channel linear PCM (32 - 192 kHz, 16/20/24 bit)
- Multichannel linear PCM (up to 7.1 ch, 32 - 192 kHz, 16/20/24 bit)
- Bitstream (Dolby Atmos, Dolby Digital, Dolby Digital Plus, Dolby TrueHD, DTS, DTS-HD High Resolution Audio, DTS-HD Master Audio)
- DSD

Your Blu-ray Disc/DVD player must also support HDMI output of the above audio formats.

#### **About Copyright Protection:**

The unit supports Revision 1.4 and Revision 2.2 (HDMI OUT MAIN/SUB and HDMI IN1 to 5 only) of the HDCP (High-bandwidth Digital Content Protection) (\* 2), a copy-protection system for digital video signals. Other devices connected to the unit must also support HDCP.

- \* 1 DVI (Digital Visual Interface): The digital display interface standard set by the DDWG (\* 3) in 1999.
- \* 2 HDCP (High-bandwidth Digital Content Protection): The video encryption technology developed by Intel for HDMI/DVI. It is designed to protect video content and requires a HDCP-compatible HDMI/DVI receiver to display the encrypted video.
- \* 3 DDWG (Digital Display Working Group): Lead by Intel, Compaq, Fujitsu, Hewlett Packard, IBM, NEC, and Silicon Image, this open industry group's objective is to address the industry's requirements for a digital connectivity specification for high-performance PC and digital displays.

#### **Caution:**

- There are some content that can be played only with HDCP Rev. 2.2 compatible devices. To play such content, connect an HDCP Rev.2.2 compatible TV or player to the HDMI OUT MAIN/SUB jack or HDMI IN1 to 5 jacks of the unit.
- The HDMI video stream (i.e., video signal) is compatible with DVI (Digital Visual Interface), so TVs and displays with a DVI input can be connected by using an HDMI-to-DVI adapter cable. (Note that DVI connections only carry video, so you will need to make a separate connection for audio.) However, reliable operation with such an adapter is not guaranteed. In addition, video signals from a PC are not supported.
- The HDMI audio signal (sampling rate, bit length, etc.) may be restricted by the connected source component. If the picture is poor or there is no sound from a component connected via HDMI, check its setup. Refer to the connected component's instruction manual for details.

### Home network (LAN)

The connection of several components via cables enabling the mutual communication is called a network.

At households, many families create (generally, the term "build" is used) a network to connect PC and gaming machines to the Internet and to exchange data between PC.

The network established in a relatively narrow area such as one household is called a LAN (Local Area Network).

In this manual, a term "home network" (network for a family) is used instead of "LAN", so this LAN becomes more familiar.

By connecting this unit with the network server such as a PC, playing music files in the network server (in the PC) is possible. Moreover, by connecting to the Internet, listening to the Internet radio is also possible.

This unit, PC, and Internet are not directly connected.

When connecting with a PC and/or Internet, several components (network components) are necessary.

#### **Components necessary for establishing a home network (LAN):**

Components necessary for the home network (LAN) for using the NET function of this unit are as follows.

##### ■ Router

A router is a device that controls information (data) flow between the unit, PC, and the Internet.

As a network term, the flow of information (data) is called "traffic". The router has a role to control the information flow as the traffic control, between connected components.

- A router with a built-in 100Base-TX switch is recommended.
- In addition, if your router has the DHCP function, facilitating the network setting becomes possible.
- Some routers have a built-in modem, and some Internet Service Providers (ISP) require you to use specific routers.

Please consult your ISP or PC dealer if you are unsure.

##### ■ CAT5 Ethernet cable

The Ethernet cable is a cable that actually connects components that comprise the network. There are straight type and cross type Ethernet cables.

- Use a shielded CAT5 Ethernet cable (straight-type) to connect the unit to your home network.

Consult your cable store for details of Ethernet cable.

##### ■ Network server (When PC etc./network server is used)

Component that stores music files and provides the unit with those files at the time of playback.

- Requirements for use with this unit depend on the component that is used as a network server.
- Conditions for pleasant playback of music files on the unit depend on the using network server (PC performance). See instruction manuals of using components.

■ Modem (when Internet radio is used)

Device that connects home network (LAN) and Internet.

There are many kinds of modems depending on the forms of Internet connection.

In addition, when connecting to the Internet, it is required to conclude an agreement with a company that provides Internet connection service, called ISP (Internet Service Provider).

Use a modem that is recommended by your ISP company for the Internet connection.

There are some devices that have both router and modem functions.

Within above network components, prepare a router, Ethernet cable, and network server when the NET function "network server" is used.

For enjoying the NET function "Internet radio", it is necessary to use the router, Ethernet cable, and modem (and agreement with ISP).

### Server Requirements

#### ■ Server playback

This unit can play digital music files stored on a PC or media server and supports the following technologies:

- Windows Media® Player 11
- Windows Media® Player 12
- DLNA-certified media server

The network server must be connected to the same network as this unit.

Each folder can contain up to 20,000 tracks, and folders can be nested up to 16 levels deep.

**Caution:** Depending on the media server, the unit may not recognize it, or may not be able to play its music files.

#### ■ Remote playback

Remote playback is the function that enables this unit to play music files saved in different components by operating the DLNA-compliant controller component and PC in the home network.

- Windows Media® Player 12
- DLNA-certified (within DLNA Interoperability Guidelines version 1.5) media server or controller component.
  - \* The setting varies depending on the media server or controller components. Refer to your components' instruction manual for details.

If the operating system of your personal PC is Windows® 8/Windows® 7, Windows Media® Player 12 is already installed. For more information, see the Microsoft web site.

### USB Storage Device Requirements

- USB Mass Storage device class (but not always guaranteed).
- FAT16 or FAT32 file system format.
- If the USB storage device has been partitioned, each section will be treated as an independent device.
- Each folder can contain up to 20,000 tracks, and folders can be nested up to 16 levels deep.
- USB hubs and USB storage devices with hub functions are not supported. Do not connect these devices to the unit.

#### **Caution:**

- If the media you connect is not supported, the message "No Storage" will be displayed.
- Sound files that are protected by copyright cannot be played.
- When the USB audio player and this unit are connected, the audio player screen and the screen of the unit may be different. In addition, control functions of the audio player (classifying and sorting music files and adding information, etc.) are not available on this unit.
- Do not connect a PC to the USB port of the unit. Inputting sound to the USB port of the unit from a PC is not possible.
- Media inserted to the USB card reader may not be available in this function.
- Some USB storage devices and its contents may require some time to be read.
- Depending on the USB storage device, proper reading of the contents and proper supply of the power supply may not be possible.
- Onkyo accepts no responsibility whatsoever for the loss or damage to data stored on a USB storage device when that device is used with this unit. We recommend that you back up your important music files beforehand.
- Performance of the hard disk that receive power from the USB port of the unit is not guaranteed.
- If you connect a USB hard disk drive to the USB port of the unit, we recommend that you use its AC adapter to power it.
- When an audio player that are operated with batteries is used, make sure that the batteries have enough remaining power.
- This unit does not support USB storage devices with security functions.

### Supported Audio Formats

- For server playback and playback from a USB storage device, this unit supports the following music file formats.
- Music files of the following formats that can be played depend on the network server. For example, when using Windows Media® Player 12, not all music files in the PC can be played. The music files that can be played are the ones registered to the Windows Media® Player 12 library.
- Variable bit-rate (VBR) files are supported. However, playback times may not be displayed correctly.
