Valves & Regulators

Directional Control Valve Products Supplemental Guide	3
--	----------

Valves

Series 9000, 9020 - Shear-Seal® Directional Control Valve	7
Series 9040, 9080 - Low Pressure OEM Valves	9
Series 6140, 6180 - High Pressure OEM Valves	11
Series 6900, 6940 - High Pressure OEM Manipulator Valves	13
Series 140, 200, 920, 5620 - Heavy Duty Valves	15
Series 3760 - Subplate Mounted Heavy Duty Valve	17
Models A14 and H14 - Series II Valve	19
Model 371MT7 - Explosion Proof Position Indicator	21
Series 4140 - High Pressure Valve	23
518, 526 Series - Microtorque™ Valve	25
Series 422 Solenoid Valve - Shear-Seal® Directional Control	27

Regulators

Series 20313 - 1/2" Heavy Duty Hydraulic Regulator	29
Series 20415 - 3/4" Hydraulic Regulator	31
Series 20495 - 3/4" Heavy Duty Hydraulic Regulator	33
Series 20517 - 1-1/2" Hydraulic Regulator	35
Series 20597 - 1-1/2" Heavy Duty Hydraulic Regulator	37

Relief Valve

Series 8010 - Pressure Relief Valve	39
Installation and Operating Instructions for Hydraulic Relief Valve	41

Interflow and Non-Interflow in Barksdale Valves

Interflow in a Barksdale Shear-Seal® valve is a small amount of fluid flow from the Pressure A and B ports to the return port through the clearance between the rotor and the body. This interflow occurs whenever the valve is shifted from one position to another or when the valve is being used for throttling. This is due to the Shear-Seal® in the valve being only partially covered by the rotor. Interflow is not leakage and does not occur when the valve is fully engaged.

The interflow in a Shear-Seal® valve is beneficial in that it reduces the hydraulic shock or “water hammer” that can occur when a valve is closed rapidly. The small amount of interflow between ports acts as a cushion as the fluid flow is stopped in the system.

Non-interflow valves are constructed with Shear-Seal®s using a much smaller flow passage than a comparably sized interflow valve. By doing this, the orifice in the pressure seal and rotor are completely covered during transition thus preventing interflow. Non-interflow valves may be required when precise control of a cylinder is needed and the small settling associated with interflow valves can not be tolerated. Non-interflow valves have a much lower flow rate than interflow valves with the same port size. Mandatory higher force is required to actuate them.

Barksdale Shear-Seal® Valves are available with many standard options as well as special order features. Many of the options available are listed below. Consult Factory for additional details and availability for a particular valve model. Don't see what you need here? Call us - we're only a phone call away.

Seal Material	Std. P/N Suffix
Butyl	-Z10
Neoprene	-Z12
Viton®	-Z13
EPR	-Z15
Silicone	-Z16
FSR	-Z17
Thiokol	-Z18
Teflon (PTFE)	-Z19
Disogrin	-Z21

Modification	Std. P/N Suffix
2-Position 45° CW detent	-Z30
2-Position 45° CCW detent	-Z31
2-Position 90° detent	-Z32
No valve detent	-Z33
No valve handle	-Z34
Valve with actuator mounting Hardware only (no actuator)	-Z35

Maintenance

1. Disassemble and inspect. Replace or repair damaged or worn parts and “O” rings; clean all parts including solenoid and plunger. Grease valve parts before assembly. The solenoid should be cleaned at least every 1,000,000 cycles or every six months. The valve should be checked every 2,000,000 or once a year.
2. All Barksdale manual selector valves for water service are equipped with a grease fitting in the housing. On untreated water, valve should be lubricated through this fitting. Frequency of lubrication depends entirely on duty cycle of valve. An increase in handle load will indicate exactly what lubrication schedule should be followed. Use water resistant lubricant such as Socony-Vacuum “Sovorex 2W”, Shell “Alvania” or equivalent. Preceding operation may be disregarded if valve is used on water treated with soluble oil.
3. At the first sign of excessive internal leakage the valve should be disassembled and the source of leakage repaired. Allowing valve to continue in operation may cause damage to other components, as the escaping fluid is generally in the form of a jet stream.

WARNING: Reverse assembly of any valve parts may result in high case pressure and possible injury. Assembly drawings, sales drawings and parts lists MUST be consulted.

Pressure Drop Curves

(Theoretical)

Pressure Drop

Barksdale's Shear-Seal® Valves have a much lower pressure drop than other valve technologies. This is possibly due to smooth internal passages and transitions within the valves which keep turbulent fluid flow to a minimum. This translates to less heat build-up and higher pressures available to perform the required work.

Determine Pressure Drop for Barksdale Shear-Seal Valves

1. Determine the Rate of Flow in G.P.M. or L.P.M. for fluid being controlled.
2. Determine minimum flow passage for valve from valve data sheet or sales drawing.
3. Locate the Pressure Drop Curve from the chart above for the appropriate minimum flow passage (indicated by the small circles at each curve).
4. Read the Pressure Drop from the vertical axis at the point where the flow rate (horizontal axis) intersects the appropriate pressure drop curve.

Note: The Pressure Drop is about the same in all flow directions.

Velocity Curves

(Theoretical)

Fluid Velocity

Barksdale's Shear-Seal® Valves control fluid at a much higher velocity than other types of valve technologies. This means that a smaller valve can be used to do the same types of job, saving you space and component costs. The recommended velocity for Barksdale valves is about 30 ft/sec (9.1 m/sec) for continuous operation. However, the valve can easily handle higher velocities up to 60 ft/sec (19.3 m/sec) for intermittent duty.

Determining Fluid Velocity in a Shear-Seal Valve for a known Rate of Flow

1. Determine the Rate of Flow in G.P.M. or L.P.M. for fluid being controlled.
2. Determine minimum flow passage for valve from valve data sheet or sales drawing.
3. Locate the Velocity curve from the chart above for the appropriate minimum flow passage (indicated by the small circles at each curve).
4. Read the Velocity from the vertical axis at the point where the flow rate (horizontal axis) intersects the appropriate Velocity curve.

Trouble-Shooting Pointers

Barksdale Manual Directional Control Valves

<u>SUSPECTED TROUBLE</u>	<u>SOLUTION</u>
High force required to shift valve Possible Cause	
1 Restriction or blockage in "return" port causing back pressure in excess of maximum allowable for valve style	1 Remove restriction
2 Valve installed in system incorrectly allowing pressure to be applied to return port	2 Install valve correctly
3 Bent detent disk rubbing valve housing	3 Repair or replace detent disk
4 Dirt or debris under trust washer causing tipping of rotor	4 Disassemble and clean valve
5 Worn or missing pin rotor pin on shaft which allows rotor to rub on housing	5 Disassemble and replace shaft pin
6 Worn or scored thrust washers causing bearings to bind	6 Replace thrust washers and bearings. If balls run on top of rotor inspect this area for damage as well.
7 Pressure in excess of valve rating	7 Reduce working pressure of valve in system with regulator, relief valve or other means.
8 Lip worn off of Shear-Seal®	8 Replace Shear-Seals®
9 Galling between Shear-Seal® and rotor	9 This is typically an affect of rotor tipping. Replace Shear-Seal®. If possible grind and lap rotor and use shim on top of rotor to make up difference that is ground off. Otherwise replace rotor.

<u>SUSPECTED TROUBLE</u>	<u>SOLUTION</u>
Symptom: Leakage around shaft	
1 Worn shaft O-ring	1 Replace shaft O-ring
2 Enlarged shaft hole in housing caused by side load on shaft. Typically only found when valve is actuated by some mechanical means which is mis-aligned	2 Replace housing. Inspect shaft for wear and replace if necessary. Correct side loading condition.

<u>SUSPECTED TROUBLE</u>	<u>SOLUTION</u>
Internal Leakage around Shear-Seal	
1 Worn Shear-Seal O-ring	1 Replace O-ring

<u>SUSPECTED TROUBLE</u>	<u>SOLUTION</u>
Internal Leakage Across Face of Shear-Seal®	
1 Scratch or other damage to face of Shear-Seal®	1 Replace Shear-Seal®. Field dressing can be performed on the face of Shear-Seal® by lapping with 600 grit paper. Paper should be held securely on a surface plate for best results.
2 Scratch or other damage to rotor	2 Lap rotor with 600 grit paper as described above. Replace rotor if leakage continues
3 Incorrect position of rotor in relation to Shear-Seals®. This can be caused by worn rotor shaft pins or worn detent disk	3 Replace detent disk or shaft pins
4 Wear on surface of Shear-Seal® after millions of cycles. This can reduce spring tension on Shear-Seal® due to material loss on seal face.	4 Replace Shear-Seal®s
5 Shear-Seal® spring fails due to breakage or taking permanent set.	5 Replace springs

<u>SUSPECTED TROUBLE</u>	<u>SOLUTION</u>
External Leakage Between Body and Housing	
1 Improperly installed body O-ring	1 Replace body O-ring and install completely in O-ring groove
2 Excessive back pressure in housing caused by restriction or blockage in return port. Back pressure can cause body bolts to stretch and allow leakage at body O-ring	2 Check pressure at return port with pressure gauge and insure it is below maximum rating for valve. Replace body O-ring
3 Body bolts not tightened to specification on assembly drawing.	3 Replace body O-ring and tighten bolts as per assembly drawing

Shear-Seal® Directional Control Valve

Series 9000, 9020

Features

- ▶ Original Shear-Seal® technology
- ▶ Interflow/non interflow
- ▶ Easy panel mounting
- ▶ Tolerates contaminants
- ▶ Spring return option

Applications

- ▶ Pilot valve for pneumatic valve actuators
- ▶ Gas manifold controls
- ▶ Manual control of 2-position cylinder

Shown with option "D" red ball type handle

General Specifications*

Working Pressure:	Pneumatic or hydraulic from 150 psi to 350 psi (10.3 to 24.1 bar); see table
Cv, Minimum Orifice:	See table
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation
Proof Pressure:	1-1/2 times working pressure except at return port (without damage to valve)
Burst Pressure:	2-1/2 times working pressure except at return port (300 psi, 20.7 bar)

Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Wetted Material:	
Body:	Anodized aluminum
Standard O-Rings:	Buna N
Pressure Seals:	Brass
Rotor:	Hard anodized aluminum
Handle Rotation:	90°; 45° each side of center
Detent:	3-position detent (except -MC, -MR options)

* See product configurator for additional options.

Product Configurator

Example: 902 2 -M

Series

- 900 Non interflow
- 902 Interflow

Port Size

- 1 1/4" pressure port
- 2 3/8" pressure port
- 3 1/2" pressure port (interflow only)

Operation

- M Manual operation
- MC Manual (spring return to center)
- MR Manual (spring return to reverse)

Optional O-ring Material

-Zxx See supplemental guide

Options

- B 2-position 90° rotation (no center position)
- C Mounting bracket w/ 4 screws
- D Red ball type handle
- CD Mounting bracket & red ball type handle
- E Black knob (not available for spring return)

Flow Pattern

- Blank if closed center selector
- A Closed center manipulator
- G Open center manipulator

Low Pressure OEM Valves

Series 9040, 9080

Patent # 3,014,499

Features

- ▶ Original Shear-Seal® technology
- ▶ Low pressure drop
- ▶ Tolerates contaminants
- ▶ Spring return option
- ▶ Flexible design

Applications

- ▶ Paper mill controls
- ▶ Air pilot valves
- ▶ Halon fill systems
- ▶ Heating oil control
- ▶ Compressed gas manifold control

General Specifications*

Working Pressure:	Gasses or hydraulic fluids up to 500 psi (34 bar)	Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Flow Capacity, Cv:	See table	Wetted Material:	
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation	Rotor:	Hard anodized aluminum
Pressure Drop:	14 psi (0.96 bar) at 20 ft/sec See Supplemental Guide for more detailed information	Pressure Seals:	Brass
Proof Pressure:	1-1/2 times working pressure except at return port	Shaft:	Stainless steel
Burst Pressure:	2-1/2 times working pressure except at return port (500 psi [34 bar])	Body, Housing:	Anodized aluminum
		Bearings:	Teflon/stainless steel
		Standard O-rings:	Buna N, others available

Pressure Range

- 0 500 psi max. Air or hydraulic fluid

Service

- A Air (pneumatic) or hydraulic fluid

Flow Pattern

- C Closed center
- O Open center (tandem center)

Options

- See Supplemental Guide for complete list

Options

- A SAE porting
- MC Spring centering

Position

- 3 Three position

High Pressure OEM Valves

Series 6140, 6180

Patent# 3,014,499

Features

- ▶ Original Shear-Seal® technology
- ▶ Low pressure drop
- ▶ Tolerates contaminants
- ▶ Spring return option
- ▶ Flexible design for OEM requirements

Applications

- ▶ Hydraulic presses
- ▶ Military equipment
- ▶ Paper mill controls
- ▶ Hydraulic pilot valves
- ▶ Railroad maintenance equipment
- ▶ Halon fill systems

General Specifications*

Working Pressure:	Hydraulic fluid up to 3000 psi (206 bar)
Flow Capacity, Cv:	See table

* For 1" ported pressure rating 2,500 psi
Not available on 1-1/2" ported valves.

High Pressure OEM Manipulator Valves

Series 6900, 6940

Patent# 3,014,499

Features

- ▶ Original Shear-Seal® technology
- ▶ Low pressure drop
- ▶ Tolerates contaminants
- ▶ Spring return option
- ▶ Special flow pattern for OEM designs

Applications

- ▶ Hydraulic presses
- ▶ Military equipment
- ▶ Paper mill controls
- ▶ Pipe forming
- ▶ Railroad maintenance equipment

Product Configurator

Series

690	Regular (side) porting, manipulator flow pattern
694	Straight (bottom) porting, manipulator flow pattern

Port Size

1	1/4" NPT ports
2	3/8" NPT ports
3	1/2" NPT ports
4	3/4" NPT ports

Style

R	Regular (side) porting (series 690)
S	Straight (bottom) porting (series 694)

Example: 690 2 R 3 H C 3

Pressure

3 3,000 psi

Working Media

H Hydraulic oil

Flow Pattern

C Closed center manipulator (float center)
O Open center (tandem center)

Position

3 3-position

Options

See Supplemental Guide for complete list

Options

-A	SAE Porting
-MC	Spring centering
-NF	Non-interflow (port size 1/4" and 3/8" NPT only)

Heavy Duty Valves

Series 140, 200, 920, 5620

Patent# 2.696.219

Features

- ▶ Original Shear-Seal® technology
- ▶ High velocity flow
- ▶ Tolerates contaminants
- ▶ Low handle load at high pressures
- ▶ Spring return option
- ▶ Low pressure drop

Applications

- ▶ Land-based and offshore drilling equipment
- ▶ Steel mills
- ▶ Nitrogen charging panels
- ▶ Refineries and chemical processing plants
- ▶ Power generation facilities

General Specifications*

Working Pressure:	Air (pneumatic) up to 4,000 psi (276 bar) hydraulic oil or lubricated water up to 6,000 psi (413 bar)
Flow Capacity, Cv:	See table
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation
Pressure Drop:	14 psi (0.96 bar) at 20 ft/sec See Supplemental Guide for more detailed information
Proof Pressure:	1-1/2 times working pressure except at return port
Burst Pressure:	2-1/2 times working pressure except at return port (3,000 psi [206 bar])

Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Rotor:	400 series stainless steel
Pressure Seals:	Stainless steel
Shaft:	Stainless steel
Body:	Bronze
Housing:	Ductile iron
Standard O-ring:	Buna N, others available
Back-up Rings:	Teflon®

* See product configurator for additional options.

- 562 Basic 5620 series valve (6,000 psi manipulator)

Port Size

- 1 1/4" NPT ports
- 2 3/8" NPT ports (Series 140 & 920 only)
- 3 1/2" NPT ports
- 4 3/4" NPT ports (Series 140 & 920 only)
- 5 1" NPT ports
- 7 1-1/2" NPT ports (Series 140 & 920 only)

Port Location

- R Regular (side) porting
- P Panel mount with side porting

Pressure Range

- 3 3,000 psi lubricated water or hydraulic, 2,000 psi air (14 & 92 Series)
- 6 6,000 psi lubricated water or hydraulic, 4,000 psi air (20 & 562 Series)

Working Media

- A Air (pneumatic)
- W Lubricated water or hydraulic oil

Flow Pattern

- C Closed center (Series 140, 200)
- O Open center (tandem center) (Series 140, 200)
- Q Manipulator (float center) (Series 920, 5620)

Position

- 3 Three position

Options

- MC Spring centering *
- MS SAE Porting

Options

- See Supplemental Guide for complete list

* For 1" ported valve pressure rating 1,500 psi
Not available on 1-1/2" ported valves

Subplate Mounted Heavy Duty Valve

Series 3760

Patent # 2.696.219

Features

- ▶ Original Shear-Seal® technology
- ▶ Convenient sub-plate manifold mounting
- ▶ Low pressure drop
- ▶ High velocity flow
- ▶ Tolerates contaminants
- ▶ Low handle load at high pressures

Applications

- ▶ Steel mills
- ▶ Shipboard hydraulic control systems
- ▶ Refineries and chemical processing plants
- ▶ Power generation facilities

General Specifications*

Working Pressure:	Hydraulic oil or lubricated water up to 4,500 psi (310 bar)
Flow Capacity, Cv:	See table
Back Pressure:	Must not exceed 250 psi (17.2 Bar) at return port for satisfactory operation
Pressure Drop:	14 psi (0.96 bar) at 20 ft/sec * See Supplemental Guide for more detailed information
Proof Pressure:	1-1/2 times working pressure except at return port

Series II Valve

Models A14 and H14

Patent# US D521.598 S

Patent# US D521.599 S

Features

- ▶ Original Shear-Seal® technology
- ▶ Integrated actuator
- ▶ 2- and 3-position
- ▶ Superior shifting performance
- ▶ High velocity flow
- ▶ Compact design
- ▶ Corrosion resistant materials

Applications

- ▶ Land-based & offshore oil drilling controls
BOP control units
- ▶ Steel mills
- ▶ Shipboard hydraulic control systems
- ▶ Industrial hydraulic power units
- ▶ Refineries and chemical processing plants

General Specifications*

- Main Valve

Working Pressure:	Hydraulic up to 3,000 or 6,000 psi (206 bar or 413 bar) Air up to 4,000 psi (276 bar)
Flow Capacity, Cv:	See table
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation
Proof Pressure:	1-1/2 times working pressure except at return port
Burst Pressure:	2-1/2 times working pressure except at return port (3,000 psi [206 bar])
Pressure Drop (all Valves):	20 ft/s – 14 psi; 6.1 m/s – 1 bar 40 ft/s – 58 psi; 12.2 m/s – 4.0 bar 60 ft/s – 130 psi; 18.3 m/s – 9.0 bar
Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Wetted Materials: Standard O-Rings: Back-up Rings:	400 Series Stainless Steel Buna N Teflon®
Handle Detent:	All valves have 3-position detents for manual shift to Center position
Panel Mounting:	Standard for 1/4" - 1/2" valves Consult Factory for 3/4" & 1" valves

* See product configurator for additional options.

Explosion Proof Position Indicator

Model 371MT7

Reliable valve position feedback for Series II Valve

Features

- ▶ Fits all Series II valves
- ▶ 2 position and 3 position
- ▶ 30 VDC max, 500 mA (PLC compatible)
- ▶ Designed for Division I and I.S. use
- ▶ UL & ATEX approved
- ▶ NEMA 4X, IP67

Applications

- ▶ Valve status output
- ▶ BOP closing unit 'OPEN-CLOSE' signal
- ▶ Hydraulic power units

**UL & ATEX
approved**

General Specifications*

Housing Material:	Stainless steel
Enclosure:	NEMA 4X, IP67
Electrical Rating:	30 VDC max, 500 mA (carry current)
Electrical Connection:	½" NPT rotating female conduit connection with 3 ft (36 in) cable
Electrical Cable:	UL listing, 4 conductors, 22 AWG TPE flame resistant jacket. Resistance to oils, fuels, and solvents
Maximum Contact Resistance:	100 milliohms
Dielectric:	100 megaohms minimum (@ 250 VDC)
Switch Type:	SPST

Approvals:	Division 1, Class 1, Groups A, B, C & D Ex d ia IIc T6 Intrinsically safe to 24 VDC, 50 mA, 10 W
Valve Position Feedback:	2-Way 3-Way
Operating Temperature:	-40 to +185°F (-40 to 85°C)
Installation Instructions:	- Connect electrical wires - Lightly lubricate the position indicator O-rings (2) - Fully insert switch into stop screw - Rotate position indicator for optimum cable exit - Secure set screws (2)
Weight:	2 lbs.

* See Product Configurator for additional options.

Wiring Code

High Pressure Valve

Series 4140

Features

- ▶ Original Shear-Seal® technology
- ▶ Stainless steel construction
- ▶ Low pressure drop
- ▶ High velocity flow
- ▶ Pressures to 15,000 psi
- ▶ Low handle load

Applications

- ▶ Offshore drilling equipment
- ▶ Refineries and chemical processing plants
- ▶ Gas compression systems
- ▶ Marine umbilical reels

General Specifications*

Working Pressure:	Standard to 10,000 psi (690 bar) Optional to 15,000 psi (1,034 bar) (on 1/4" model only)
Flow Capacity, Cv:	See table
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation
Pressure Drop:	14 psi (0.96 bar) at 20 ft/s
Proof Pressure:	1-1/2 times working pressure except at return port
Burst Pressure:	2-1/2 times working pressure except at return port (3,000 psi [206 bar]) maximum

Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Rotor:	400 series stainless steel
Pressure Seals:	Stainless steel
Shaft:	Stainless steel
Body, Housing:	300 series stainless steel
Standard O-ring:	Buna N
Back-up Rings:	Teflon®

* See product configurator for additional options and Supplemental Guide for more detailed information.

Product Configurator

Example: 414 1 R 9 A C 3

Series

414 Basic 3 position 4 way

Port Size

- 1 1/4" NPT ports
- 3 1/2" NPT ports
- 5 1" NPT ports

Operating Pressure

9 10,000 psi

Service

A Air, lubricated water or hydraulic oil

Flow Pattern

- C Closed center
- O Open center (tandem center)

Options

- MC Spring centering *
- MS SAE Porting

* Not available on 1" ported valves

Style

R Regular (side) porting

Position

3 Three position

Microtorque™ Valve

518, 526 Series

Features

- ▶ Original Shear-Seal® technology
- ▶ Compact design
- ▶ Non-interflow option
- ▶ Spring return option
- ▶ Multiple handle types
- ▶ 2 or 3 position detent

Applications

- ▶ Work holding clamps and systems
- ▶ Hydraulic presses and lifting systems
- ▶ Hydraulic test equipment
- ▶ Grease injection equipment
- ▶ Hydraulic power units

General Specifications*

Media:	Hydraulic oil
Working Pressure:	6,000 psi (415 bar) **
Flow Capacity, Cv:	See table
Back Pressure:	Must not exceed 250 psi (17.2 bar)*** at return port for satisfactory operation
Proof Pressure:	1-1/2 times working pressure except at return port
Burst Pressure:	2-1/2 times working pressure except at return port
Media Temperature Range:	-40° to +250°F (-40° to +121°C)
Porting:	1/4" NPT, SAE for 1/4" tubing, or DO3 pattern for manifold mounting
Mounting:	Panel mountable with p/n 22357 mounting nut (-P option) DO3 Manifold mounting shipped with (4) #10-24 screws and O-Rings
Handle Rotation:	90°; 45° each side of center position

* See product configurator for additional options.

** Consult factory for pressure up to 10,000 psi (690 bar)

*** For requirements in excess of 250 psi (17.2 bar) at return port consult factory

Detent:	
2-position:	Detent at 90° positions
3-position:	Detents at center and 2 extreme positions
Optional Spring Return:	Available to center or either shifted position 5,000 psi (345 bar) max working pressure on spring return option
Body & Housing:	Anodized aluminum
Shaft, Rotor, Pressure Seals:	400 series stainless steel
Standard O-Rings:	Buna N, others available
Back-up Rings:	Teflon
Bearings:	Hardened steel
Shipping Weight:	.95 lbs

	Flow Capacity (Approx.)		Min. Flow Passage Dia.	Cv Factor
	20 ft/sec (6.1 m/s) gpm (l/min)	40 ft/sec (12.2 m/s) gpm (l/min)

Shear-Seal® Directional Control

Series 422 Solenoid Valve

Features

- ▶ Original Shear-Seal® technology
- ▶ Explosion-Proof option
- ▶ Zero-leakage*
- ▶ Spring close with no power
- ▶ Flexible flow patterns
- ▶ Tolerates contaminants

Applications

- ▶ Mining operations
- ▶ Offshore oil platforms
- ▶ Refineries and chemical processing plants
- ▶ Power generation facilities
- ▶ Air or hydraulic test equipment

General Specifications**

Working Pressure:	Air (pneumatic) up to 1,500 psi (103 bar) Hydraulic oil or lubricated water, up to 3,000 psi (206 bar)
Pressure Drop:	9 psi at 2.5 gpm 32 psi at 4 gpm (For more detailed pressure drop and flow capacity information, see valve supplemental guide)
Max. Fluid Velocity:	20ft/sec (6.1 m/sec)
Cv Factor:	0.7
Min. Flow Diameter:	7/32 in. (5.6mm)
Back Pressure:	Must not exceed 250 psi (17.2 bar) at return port for satisfactory operation
Proof Pressure:	1-1/2 times working pressure except at return port
Burst Pressure:	2-1/2 times working pressure except at return port (3000 psi [206 bar])
Media Temperature Range:	-40° to +250°F (-40° to +121°C)

* Less than four cc per minute

** See product configurator for additional options.

Electrical Data:	
Solenoid Voltage:	115V AC at 60 Hz (Alternative AC & DC voltages are available).
Current - Inrush:	16.8 amps
Current - Holding:	1.52 amps
Voltage Tolerance:	±10% of rated voltage
Solenoid Rating:	Continuous duty
Material of Construction:	
Slide:	400 series stainless steel
Body & Pressure Fittings:	Bronze
Pressure Seals:	Stainless Steel
Standard O-Ring:	Buna N
Back-up Rings:	Teflon®
Shipping Weight:	11.5 Lbs. / Explosion-Proof 20 Lbs.

Flow Pattern	4-Way	3-Way		Shut-Off		Diverter
		Norm. Open	Norm. Closed	Norm. Open	Norm. Closed	
*Plug Port Marked "X"	None	Cyl. 2	Cyl. 1	Ret. & Cyl. 2	Ret. & Cyl. 1	Ret.

Part Number

422S3WS2A1	Oil or lubricated water, 3,000 psi max, 115V AC
422S3AS2A1	Air, 1,500 psi, 115V AC

Alternative voltage and DC Solenoids are available. Consult factory for more detail

1/2" Heavy Duty Hydraulic Regulator

Series 20313

Features

- ▶ Original Shear-Seal® technology
- ▶ Self adjusting
- ▶ High flow capacity
- ▶ Tolerates contaminated media
- ▶ Fail-safe motor control options

Applications

- ▶ BOP Control Units
- ▶ Coiled tube reels
- ▶ Oil and gas systems
- ▶ Pressure sensitive applications

General Specifications*

Pressure:		Materials of Construction:	
Supply/Inlet Pressure:	5,000 psi (345 bar)	Body:	Stainless Steel (standard)

- ▶ Metal-to-metal seal

Applications

- ▶ Pump system safety
- ▶ Compressor over pressure protection
- ▶ Hydraulic power units
- ▶ Tank protection
- ▶ Accumulator systems

General Specifications*

Working Pressure:	Hydraulic oil up to 5500 psi (380 bar)
Proof Pressure:	10,000 psi (690 bar)
Pressure Ranges:	500 - 1500 psi (35 - 105 bar) 1500 - 3500 psi (105 - 240 bar) 3500 - 5500 psi (240 - 380 bar)
Flow Rate:	15 GPM (NOMINAL)
Wetted Material:	
Process Fitting:	Heat-treated 410 stainless steel
Internals:	416 stainless steel
Spring:	Powder-coated high strength steel
Ball:	Tungsten Carbide
Housing:	Powder-coated ductile iron
Weight:	2.5 lbs.
Pressure Connection:	3/4" NPTM x 3/4" NPTF
Temperature Range:	-40° to +200°F (-40° to +93°C)
Pressure Settings:	It is recommended that cracking pressure be set 10% above working pressure.
Pressure Setpoint Adjustment:	Loosen hex nut with open-end wrench. Using allen key turn adjustment screw clockwise to increase, counterclockwise to decrease set point.

* See product configurator for additional options.

Flow Rate at 10% above Cracking Pressure

Typical 8014 Lift Characteristics

Pressure Relief Valve

Series 8010

Technical Drawings

Product Configurator

Example: **801 4 -3 -33**

Prefix

T Tamper-proof cap (optional)

Base Model

801 Inlet male - outlet Female Porting

Port Size

4 3/4" NPT ports

Pressure Range

	Adjustable Range		Approx. Blowdown	Proof Pressure
	psi (bar)			
	Min.	Max.	psi (bar)	psi (bar)
-2	500 (35)	1500 (105)	200 (15)	10,000 (690)
-3	1500 (105)	3500 (240)	400 (28)	10,000 (690)
-4	3500 (240)	5500 (380)	600 (42)	10,000 (690)

Housing Option

Blank	Corrosion Resistant Ductile Iron (standard)
SS	Stainless Steel

Factory Set Point

Blank	Field Adjustable
-XX	Insert desired set point in 00's (ex. 3300 psi = -33 700 psi = -07)

Description:

This is a hydraulic pressure relief valve having a factory set or field-adjustable set point. The valve is designed to work with hydraulic oil-based media. This valve is not intended for water or steam-based applications. Standard wetted materials include stainless steel, ductile iron, steel and Buna-N.

Caution:

The recommendations below are general and it is the responsibility of the user to assure that installation and maintenance are in accordance with local requirements and ASME practices. This valve should be installed by a trained service person. A media filter should be in the system to protect the valve. Neither Barksdale nor its agents assume any liability for valves improperly used in the application or improperly installed and maintained.

Installation:

Mounting: Valve shall be mounted in a vertical position and connected in the flow direction shown by the arrow. Use wrench flat 1 5/8 inch to secure valve to pipe line.

Piping: Support with adequate piping in order to avoid excessive shock and vibration. Valve inlet is 3/4" NPT male and the outlet is 3/4" NPT female. It is recommended that a minimum of 1/2" pipe size to be used for the inlet and the outlet connection.

Ambient Temperature: -40°F to 200°F

Operating Pressure Range (PSIG):

Adjustable Range Code	Pressure Range (psi)	Tolerance ± (psi)
-1	200 - 500	50
-2	500 - 1500	150
-3	1500 - 3500	350
-4	3500 - 5500	550

Field Adjustment of Relief Pressure Set Point:

- Tools Required:
 - Allen key 5/16 inch
 - Torque wrench
 - Open end wrench 15/16 inch
- Adjustment Procedures:
 - Use 15/16 inch open end wrench to loosen locking nut by turning it counter clockwise (CCW).
 - Insert Allen key to top of adjustment stud and rotate it counter clockwise (CCW) to decrease set pressure. Turn it clockwise (CW) to increase set pressure.
 - Re-tighten anti-vibration locking nut firmly against flat valve body and torque with a torque wrench to 300 in-lb.

Caution: Failure to torque locking nut to specified value can cause malfunction, failure of relief pressure, or injury.

For service or ordering information:

Consult factory or authorized factory representative. Specify full catalog number (with any optional modification) and factory set point.
