## ERHARDT Z

VERTICAL SUN AND VISUAL PROTECTION  
WITH ZIP SYSTEM

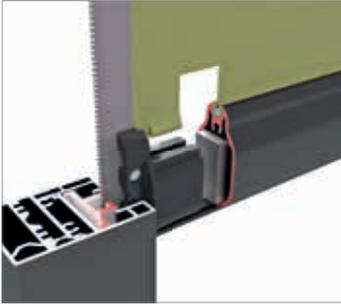

## ERHARDT Z DESIGNED TO BE VERSATILE

For ERHARDT Z series vertical awnings, the fabric is guided in a special, rail system by means of a welded-on zipper system. It thus has an attractive, uniform appearance with no annoying light gap between the awning fabric and guide rail. This innovative technology also results in significantly improved wind stability. The ERHARDT Z is designed as a very versatile vertical awning. When combined with an ERHARDT terrace roof T100, T150 or T<sup>INTEGRAL</sup>, it provides optimal protection from sun, wind and curious glances, thus creating a pleasant atmosphere. A large selection of fabric designs is available with the ERHARDT Tibelly Screen collection for the personalisation of your awning.

# ERHARDT Z

## ONE PRODUCT – MANY OPTIONS

### ZIP

For ERHARDT vertical zip awnings, the fabric is guided via a welded-on zipper and runs in a special insert in the guide rail. This type of guide provides significantly improved wind stability.

### Various housing designs

The retracted awning fabric enjoys complete protection from weather influences in the small, visually discreet cassettes made from an extruded aluminium profile. A meticulous powder coating applied to all aluminium profiles and small parts makes the surfaces extremely durable and resistant to weathering. (see table overleaf)

### Motor control for added convenience

The ERHARDT Z awnings are equipped with a motor as standard. For increased ease of use, it can be optionally equipped as a remote-controlled drive with a remote control. The ERHARDT PV module, which allows the vertical awning to function completely independently in any installation situation, is new.

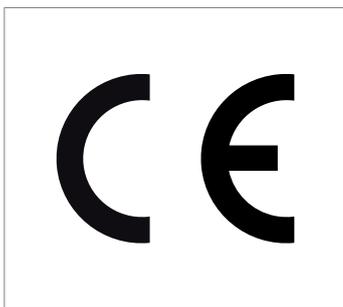

### Concealed end bar

When retracted, the vertical awning is invisible. For the Z105 and Z125 models, the end bar can be fully retracted into the cassette and no obtrusive profiles can be seen.

### Patented technology

The Z-R90 SH model features patented technology for rolling and unrolling the fabric without any folding. A swivel lever ensures the fabric moves into exactly the right position while rolling and unrolling, making the fabric extremely smooth when extended and avoiding large folds to give you effective wind and sun protection.

**CE Made in Germany**

All ERHARDT Markisenbau awnings are made in Burtenbach, Bavaria. All-round service and continuous production control guarantee high quality.

**Perfectly suited for window shading also**

The slim design of the housing and sleek guide rails make the awning perfect for window installation and shading. With the appropriate Soltis fabric, it helps you create a pleasant atmosphere, e.g. for a workspace.
