

ARTESYN iLS1500 SERIES

Intelligent Laboratory Power

1500W Rack Programmable Power Supplies

Advanced Energy's Artesyn iLS1500 series is a programmable DC power supply with a single 1500 Watt output. With 12-bit D/A & A/D converters embedded, the power supplies come with the capability of reporting voltage and current very accurately. The iLS1500 series provides convenient dynamic rotary controls for voltage and current adjustment. The power supplies also come with rear ports that allow remote control via USB, Ethernet, and analog control inputs and they are designed to offer either bench use or rack mounting. The iLS1500 series is LXI certified, details for using this interface can be found in our Programming Manual.

SPECIAL FEATURES

- 1500W with extended range
- LXI certified
- 5 models: up to 400V and 70A
- Small, high-density 1U package
- Wireless digital remote sense
- Built-in voltage and current measurement
- Full OCP and OVP protection
- Series and parallel operation

STANDARD USER INTERFACE INCLUDES:

- Ethernet, USB 2.0 and analog
- LXI interface
- Command capability for keysight 603X, sorensen DLM and xantrex XFR
- LabVIEW drivers

SAFETY

- Conforms to UL 60950-1 and UL 62368-1
- Certified to CAN/CSA C22.2 No. 60950-1 & 62368-1

APPLICATIONS

- Test and Measurement
- ATE
- Laboratory
- Research and Development

AT A GLANCE

Total Power:

1500 Watts

Input Voltage:

100 - 240 Vac

of Outputs:

Single

Notes

1. Rating is percent of full scale. Rating is for operation between 10% of minimum voltage or current rating to 100% of voltage rating and the current rating at that voltage. Minimum voltage is guaranteed at greater than 1% of the rated output voltage. Minimum current is guaranteed at greater than 1% of the rated output current.
 2. Measured with 20 MHz bandwidth and excluding line frequency ripple (see application note AN024 for measurement details).
 3. Time for output voltage to recover within 0.5% of its rated output for a load change from 10 to 90% of its rated output current.
Voltage set point from 10% to 100% of rated output.
 4. Add this to the output reopens time to obtain the total programming time.
 5. Time to provide data back to the controller using LAN interface (does not include A/D conversion time).
 6. 1500 Watt Output is only available with an AC input of 110 VAC or greater. With a lower AC line, output will be limited to 1100 Watts.
- * Supplemental characteristics are not warranted but are descriptions of typical performance determined either by design or type testing.

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
