

Software Upgrade Guide for LEXUS – 19 Aug 2015

Version 0.16

In order to perform a free software upgrade for Route Guidance and Traffic Information optimisations, the following items are required:

- PC or Laptop with USB port, with a connection to the Internet.
- USB stick.

NOTE:

The USB stick needs to be FAT 32 formatted, with a capacity of 1GB or greater. The USB memory should be empty. To check if this is the case, or to get more details, insert the USB stick into your PC / laptop and right-click on the USB icon.

Please note that the software should be unzipped before being saved to the 'root' file structure of the USB stick. Do not save the software files to any other directories or folders.

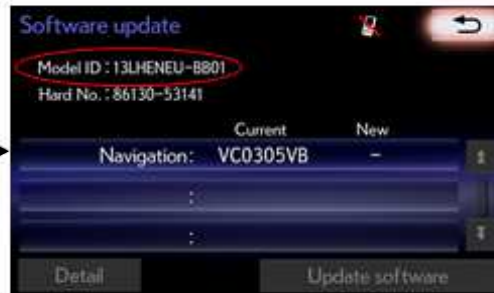

STEP 1

There is one icon that covers the software variants for all Lexus models. To transfer the software to the USB stick, please follow the steps below:

From the Lexus customer portal (my.lexus.eu), go to eStore -> Map & Software Updates -> Featured Products. Here you will see the icon 'Update for Lexus Vehicles'; select the icon and download the software onto a USB stick. Note that you will need to unzip the file before saving the contents onto the root directory of the USB stick.

STEP 2

On your Lexus Premium Navigation device, go to the Software Update screen. This can be found as follows:

Insert the USB stick into the USB port.

※Please do not insert any other memory device into the USB port – only the USB stick required for the update should be used.

The USB port is shown as follows:

The system will detect that new software is available, as shown in the first image below. Select 'Update Software' to proceed.

When prompted with 'Start the software update?', press the 'Yes' button. The software will then be transferred to the memory of your Lexus Premium Navigation device. This process takes about 5 to 10 minutes during which time you can continue to use the navigation features.

STEP 3

To complete the software update, please push the ignition button of the vehicle off and then back to on. The subsequent software download operation step takes about 20 seconds during which time you will be unable to use any features on your Lexus Premium Navigation device.
