PIONEERING THE POWER THAT MATTERS.

Rolls-Royce provides world-class power solutions and complete life-cycle support under our product and solution brand **mtu**. Through digitalization and electrification, we strive to develop drive and power generation solutions that are even cleaner and smarter and thus provide answers to the challenges posed by the rapidly growing societal demands for energy and mobility. We deliver and service comprehensive, powerful and reliable systems, based on both gas and diesel engines, as well as electrified hybrid systems. These clean and technologically advanced solutions serve our customers in the marine and infrastructure sectors worldwide.

A solution provider

mtu systems power the largest yachts, the strongest tugboats and the biggest land vehicles and provide energy for the world's most important mission-critical applications. Through advanced solutions such as microgrids, we integrate renewable energies and manage the power needs of our customers.

Our customized service offerings help you maximize uptime and performance and are supported by our digital solutions, which enable remote monitoring, predictive maintenance and a range of other benefits that keep your systems running at their best.

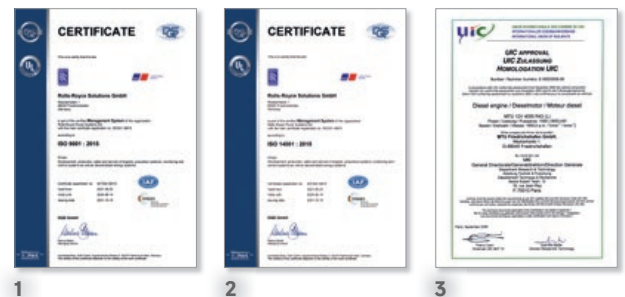

For over 110 years, we have provided innovative power solutions for our customers – meeting even the most demanding drive requirements. Our products and services span a wide range of applications and power needs, with both standard and customized options.

An expert in technology

As part of Rolls-Royce, we have long been known for cutting-edge innovation and technological leadership in product development. That same spirit of innovation inspires our sustainability efforts. Our focus is on developing and implementing system solutions that both maximize efficiency and reduce emissions – which in turn work to reduce our impact on the environment.

A passionate and reliable partner

We at Rolls-Royce spend every day working together with our customers, to deliver engines, systems and complete life-cycle solutions that best fit your needs. We understand that each application is different and has its own specific demands. Our engineers embrace the challenge of finding the perfect solution for your unique power requirements. Every step of the way – from project planning, through design, delivery and commissioning; to the lifetime care of your equipment – we are dedicated to helping you get the most from your **mtu** investment.

1 ISO 9001

2 ISO 14001

3 UIC

GENERAL SPECIFICATIONS

Four-stroke diesel engine for traction

- Direct injection
- Liquid-cooled
- V or In-line configuration
- Suitable for mechanical, hydrodynamic, hydrostatic and electric power transmission

Power Definition

All power ratings are service standard power in accordance with ISO 3046 and UIC.

Ambient air pressure:	1000 mbar
Height above sea level:	100 m
Intake air temperature:	25 °C
Charge-air coolant temp.:	45 °C

Fuel consumption in accordance with DIN/ISO 3046

Exhaust emission standards

EU = EU Nonroad Directive 2016/1628
EPA = US Regulation 40 CFR
UIC = International Railway Association

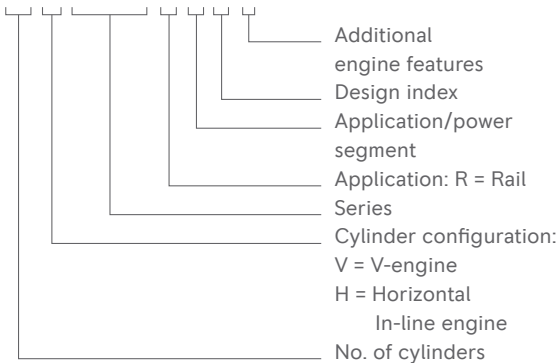

Please note, specifications are subject to change without further notice. All dimensions are approximate, more detailed information is included within installation drawings.

For further information on our rail products please contact your distributor or visit: www.mtu-solutions.com

EXPLANATION OF THE ENGINE DESIGNATION

Series 1800, 1600, 2000, 4000 – Example

16 V 4000 R 4 3 L

Additional engine features

Power uprated	L
Speed/power reduced	R
PowerPack	P

Performance overview

POWERPACKS

PowerPacks for roof and underfloor installation

Drive solutions for railcars, push-pull trains and locomotives

POWERPACKS FOR RAILCARS

mtu PowerPack –
the highly compact, highly integrated solution.
Representation of a diesel-electric **mtu** PowerPack 12V 1600 with aftertreatment system (SCR, DPF and DOC). We have developed a series of individualized solutions involving a range of different frames and will use our extensive experience to find the appropriate solution.

Roof mounting

Standard scope of supply

1	Engine	6H 1800 12V 1600
2	Power transmission	
	Transmission	DM: ZF 6AP 2000R / ZF 6AP 2500RDH: Voith T211 / T212
	Traction generator	Permanent magnet synchronous generator External excited synchronous generator Asynchronous generator
3	Cooling system	Underfloor or roof installation Hydraulic or electrical fan drive
4	Exhaust system	EU Stage IIIA compl. – exhaust silencer EU Stage IIIB compl. – SCR exhaust aftertreatment system EU Stage V – SCR plus DPF & DOC exhaust aftertreatment system

Additional scope of supply

5	On-board power generation	
	Air compressor	only available for PowerPack Series 1800
	Air conditioning compressor	only available for PowerPack Series 1800
	Preheating	
	CaPos smart edition	
	SafeMon	
	Autom. oil replenishment	

Underfloor mounting

Drive solutions for railcars, push-pull trains and locomotives

HYBRID POWERPACKS FOR RAILCARS

Hybrid PowerPack –
the next generation of railcar drive systems.
Representation of a Hybrid PowerPack 6H 1800 with two **mtu** EnergyPacks and with EU Stage V aftertreatment system (SCR, DPF and DOC). A proven hybrid drive system, ready for commercial operation: our modular platform offers customizable drive solutions that can be combined to ensure maximum efficiency, flexibility and sustainability.

Roof mounting of **mtu** EnergyPacks

Standard scope of supply		
1	Engine	6H 1800 12V 1600
2	Power transmission	Parallel hybrid ZF 6 AP 2500R and mtu electrical drive
3	Battery system	34,4 kWh per battery
4	Cooling system	Underfloor installation, electrical fan drive
5	Exhaust system	EU Stage IIIA compl. – exhaust silencer EU Stage IIIB compl. – SCR exhaust aftertreatment system EU Stage V - SCR plus DPF & DOC exhaust aftertreatment system

Underfloor mounting of **mtu** EnergyPacks

Performance overview

ENGINES AND SYSTEM SOLUTIONS

- * Engines for industrial applications with EU Stage VI / EPA Tier 4 certification
- ** For rail specific usage please contact your local partner
- *** Available as single- and dual-engine PowerPack

Drive solutions for locomotives

SYSTEM SOLUTIONS WITH SERIES
1300 AND 1500: RUGGED, RELIABLE
AND READY TO ROLL

Whether for use in locomotives, railcars or special-purpose vehicles, **mtu** system solutions with Series 1300 and 1500 smartly integrate all drive components in a compact solution to deliver rugged, reliable performance that's ready to roll.

-
- 1 Exhaust aftertreatment system
 - 2 Traction alternator
 - 3 Diesel engine
 - 4 Coolant system

mtu system solutions with Series 1300 and 1500 benefits

- Depending on power needs available with single- or dual-engine
- Compact, lightweight engine and EGA system design
- Installation-ready solution for locomotives, railcars and special-purpose vehicles
- Proven in various applications of rugged and reliable performance
- EU Stage V NRE* certified
- Suitable for EPA Tier 4 NRMM** locomotives
- Condensed cooling system with low cooling load
- Can be operated with synthetic fuels***

* Engines for mobile nonroad machinery

** Nonroad Mobile Machinery

*** Applies to Series 1300 & 1500 EU Stage IIIA/V

Drive solutions for railcars, push-pull trains and locomotives

SYSTEM SOLUTIONS WITH SERIES 1600, 2000 AND 4000: ALL-ROUND OVERACHIEVERS

To characterize the **mtu** system solutions Series 1600, 2000 and 4000 as overachievers is almost an understatement. Talk about durability, dependability and clean operational efficiency. Since 1996, these diesel engines have been installed in well over 3,000 railway applications worldwide.

-
- 1 Generator
 - 2 Exhaust gas aftertreatment solution
 - 3 Engine

mtu system solutions with Series 1600, 2000 and 4000 benefits

- Simple, single-frame engine and generator installation
- Perfect system component integration based on:
 - Complete torsional vibration analysis for the entire system
 - Calculation of vibration impact on locomotive performance
 - Optimized engine and generator alignment
- Excellent efficiency through common rail fuel injection and advanced engine control
- Superb emissions values: eliminates up to 99% of particulates
- Development, commissioning and service warranty all handled by one source

Remanufactured and repowering solutions

EXCHANGE AND SAVE.

Factory remanufactured products deliver the same high standards of performance, service life and quality as new products, along with identical warranty coverage – at a fraction of the cost. And with design and model-related updates, they also feature similar technological advancements. Developed by R&D engineers, the remanufacturing process saves you time and money, while benefiting the environment through the reuse of materials. To help you work efficiently, a wide range of remanufactured parts, engines and systems are available worldwide.

Optimize fuel economy

As you evaluate your long-term power needs, you must consider a variety of factors. Factory remanufactured products are a smart solution, helping you to reduce the total lifecycle cost of your equipment.

Maximize uptime

Factory remanufactured products put your equipment back to work faster than an overhaul, which reduces downtime, service time and indirect costs such as storage.

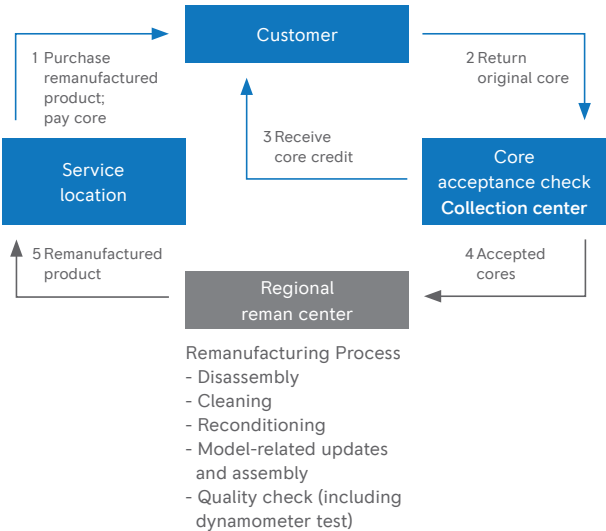

Avoid the unexpected

All products are remanufactured/overhauled to our strict standards by certified technicians at our regional centres. We remanufacture/overhaul parts, engines and/or systems to both original and upgraded factory specifications.

Work with one source

Since remanufacturing is an efficient use of resources and energy, factory remanufactured products benefit the environment as well.

Exchange Process

- | | |
|---|---|
| 1 Customer purchases remanufactured product from local service partner and pays the core deposit. | 4 Accepted cores are sent to regional reman centers, where the remanufacturing process takes place. |
| 2 Customer's original core is returned to collection center by local service partner for core acceptance check. | 5 Remanufactured products are delivered to our service partners and made available for purchase. |
| 3 Customer receives core credit based on the core's technical condition. | |

Repowering solutions

ECONOMIC ALTERNATIVES.

Reconditioning and repowering solutions for locomotives and railcars offer a tried and tested economic alternative to placing a new order with four positive effects:

- Using a modern diesel engine reduces operating and maintenance costs while maximizing the economic benefits.
- Legally stipulated exhaust gas emission standards are met and noise levels significantly reduced.
- Vehicle availability and reliability are brought up to the level of a new vehicle.
- The cost of investment is considerably lower than a new vehicle.

Following conversion, the reduced operating costs enable many potential savings:

- Reduction in fuel costs.
- Extended maintenance intervals and minimized costs thanks to new maintenance concept.
- Legal requirements are met by proven combustion technology; lower fuel and oil consumption lead to reduced pollutant emissions, thus benefitting the environment.
- Lower investment costs through reduced reserve locomotive stock.
- Limited downtime thanks to high availability and reliability.

As a rail industry partner with extensive experience, we not only repower engines, but also provide a comprehensive package of other support services:

- From the design phase to drive system implementation – active support and professional engineering at all stages of the repowering project.
- Supply of the latest, extensively tested engines and PowerPacks featuring compact designs and excellent power-to-weight ratios enabling easy installation, even of higher outputs without permissible axle loads being exceeded.

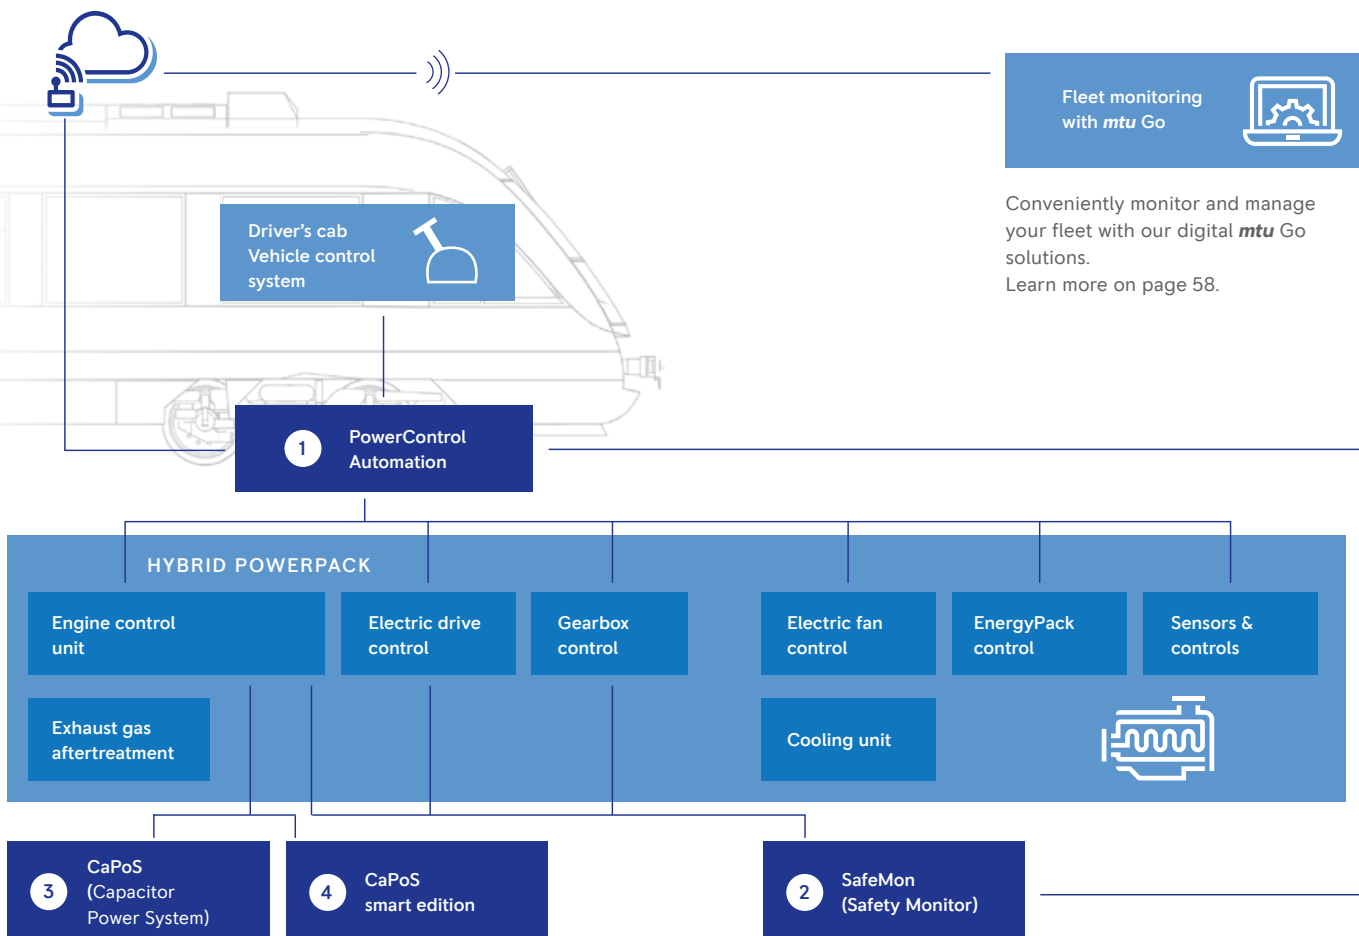

Automation solutions

OPTIMAL DRIVE SYSTEM CONTROL.

Serving as the operational brain, the PowerControl Automation system monitors and controls the drive system, its components. The main function is to control the power distribution within the drive system and provide the demanded power to the rail vehicle.

PowerControl Automation continually monitors the entire drive system, ensuring maximum drive power availability while optimizing performance efficiency, fuel consumption and emissions reduction – for all types of railcars and in all types of climatic environments.

You will find more details on the next page 54/55.

Automation solutions

ENHANCED AUTOMATION FUNCTIONS.

Designed as a modular platform that easily integrates with wide-ranging rail drive control systems, PowerControl Automation functions can be further enhanced with the optional systems SafeMon, CaPoS and CaPoS smart edition.

SafeMon

The SIL-certified safety monitoring unit SafeMon reliably screens all safety-relevant engine, electric drive and gearbox control functions, immediately activating a shutdown, if necessary.

Automation system	1 PowerControl Automation	2 Safemon (Safety Monitor)
		
Descriptions	Lets you digitally monitor and maximize the performance and safety of your entire fleet.	Optimizes operational safety by reliably monitoring and controlling all safety-related functions.
Advantages at a glance	<ul style="list-style-type: none">– Complete, high-connectivity automation control solution– Easy to integrate and scalable for wide-ranging applications– For new rolling stock and repowering– Monitors all critical operational functions of the entire PowerPack	<ul style="list-style-type: none">– SIL-certified safety unit– Documents all safety-relevant operational procedures– Simplifies safety approval process

Available for rail engines and PowerPacks: Series 1600, 1800 & 4000

Implemented safety functions

SIL 1	SIL 2	SIL 3
<ul style="list-style-type: none">– Avoidance of unwanted traction– Protection against overspeeds	<ul style="list-style-type: none">– Safe shutdown of the PowerPack, if required (Emergency stop)– Safe uncoupling	<ul style="list-style-type: none">– Safe disconnection of the traction

CaPoS

Innovatively optimizing cold start-up behaviour, the capacitor power system CaPoS marks a great improvement over conventional starter batteries.

CaPoS smart edition

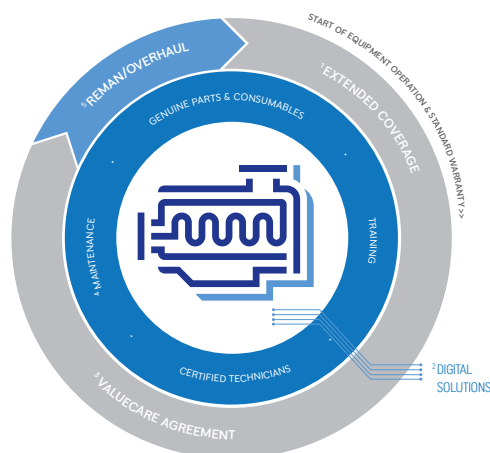

Featuring an integrated starter with 24V onboard, the CaPoS smart edition is ideal for the heavy duty start-up tasks of Series 1600, 1800 and 4000 engines.

3 CaPoS (Capacitor Power System)	4 CaPoS smart edition
	
Innovatively optimizes cold start-up behaviour, replacing conventional starter batteries.	Capacitor power system designed specifically for heavy duty tasks such as 24V DC starting sequences.
<ul style="list-style-type: none">– Optimized cold-starting properties– Autonomous, modular and maintenance-free design– Low lifecycle costs– Electrical system voltage: 16V DC – 154V DC– CAN interface	<ul style="list-style-type: none">– Stand-alone component with integral charger– Optimized cold-starting capabilities– Autonomous, modular and maintenance-free design– Low lifecycle costs– 24V DC onboard voltage– Integrated DC-/DC converter for automatic recharging– IP66 protection

Complete lifecycle solutions

ENSURE A LONG,
RELIABLE LIFE.

As your equipment ages, its needs — and yours — change. Our full portfolio of service solutions wrap around your investment, providing 360 degrees of customized support, for optimal value at every stage of life.

- 1 Avoid the unexpected with added protection beyond the standard warranty.
- 2 Make better decisions faster with digitally-enhanced tools.
- 3 Maximize availability and optimize lifecycle costs with a ValueCare Agreement.
- 4 Improve system performance and extend equipment life with on-demand support.
- 5 Keep a good thing going with factory reman/overhaul solutions.

Preventive maintenance

DON'T LET THE UNKNOWN
LEAVE YOU UNPREPARED.

With large investments, lifecycle costs can be significant. It's often the unforeseen costs lurking below the surface – things like fuel consumption, unplanned downtime and repairs – that have the greatest potential to impact your business. That's why it pays to invest in our superior power systems and plan ahead with preventive maintenance. There's no better way to optimize fuel economy, maximize uptime and avoid the unexpected.

Optimize fuel economy.

Fuel consumption accounts for up to 90 percent of total lifecycle costs depending on the application—by far one of the most significant costs associated with your equipment. Well-maintained engines deliver industry-leading fuel efficiency, helping you keep fuel costs down over the long term.

Maximize uptime.

Preventive maintenance services can be planned around your schedule, so your equipment is available when you need it most.

Avoid the unexpected.

Planned maintenance helps solve problems before they start, helping you avoid unexpected downtime and resolve problems early before they escalate.

Work with one source.

We keep maintenance simple, safe and efficient. Our factory-approved methods and expert technicians ensure everything is done correctly according to our proprietary preventive maintenance schedules, optimizing the availability of your equipment, reducing lifecycle costs and helping you avoid unforeseen problems.

The importance of preventive maintenance

When preventive maintenance is a high priority.

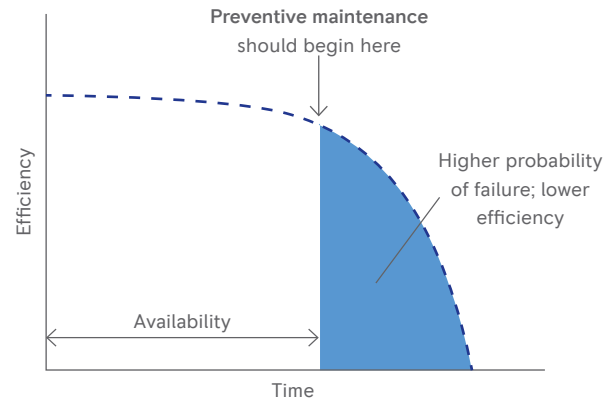

1. Scheduled stops
2. Improved performance
3. Better control over operation

When preventive maintenance is a low priority.

1. Nonscheduled stops
2. Inability to plan
3. Lower performance

We focus on preventive maintenance to reduce the downtime and added costs of corrective maintenance.

Delaying maintenance increases unexpected failures and decreases performance and fuel economy.

ValueCare Agreements

FOCUS ON YOUR OPERATIONS.
LEAVE THE REST TO US.

You've got a tough job. With us as your partner, you'll get the power, performance and peace of mind to get it done right. The digitally connected power systems of our ValueCare Agreements make it easy to keep your business running smoothly and reduce total cost of ownership by maximizing uptime, optimizing lifecycle costs and helping you avoid equipment-related business disruptions through preventive maintenance.

Service solutions designed around your priorities

ValueCare agreements make it easy to optimize lifecycle costs, maximize uptime and devote more time and resources to your core business, with tailored solutions to move your business forward.

Bronze**Ensure parts availability and price stability**

- Digital connectivity (**mtu** Go Connect) and access to **mtu** Go platform
- Automated delivery of parts (preventive) at a predefined rate based on operating hours
- Preventive maintenance labor options to fit your business needs
- Dedicated support for technical issues
- Quarterly reporting of completed and upcoming maintenance and costs
- Annual on-site engine health check by our technician

**Silver****Eliminate unexpected maintenance costs**

- Proactive maintenance planning, troubleshooting and remote engine health monitoring
- Fixed pricing per operating hour for maintenance and repairs
- Key corrective maintenance components always in-stock at our main warehouses
- 24/7 standby service with remote technical support
- Quarterly reports, including reliability analysis (mean time between failure)

Silver also includes all benefits of Bronze level

**Gold****Maximize operational uptime**

- Operational uptime commitment to meet or exceed your availability targets
- Regular supervision by local service partner (e.g. monitoring of parts stock, improvements)
- 24/7 emergency assistance with on-site support
- Monthly reports, including availability and average repair times
- Asset health monitoring
- Annual performance meetings and trend analysis with us to address technical updates, engine fleet data, operational optimization and more

Gold also includes all benefits of Silver & Bronze levels

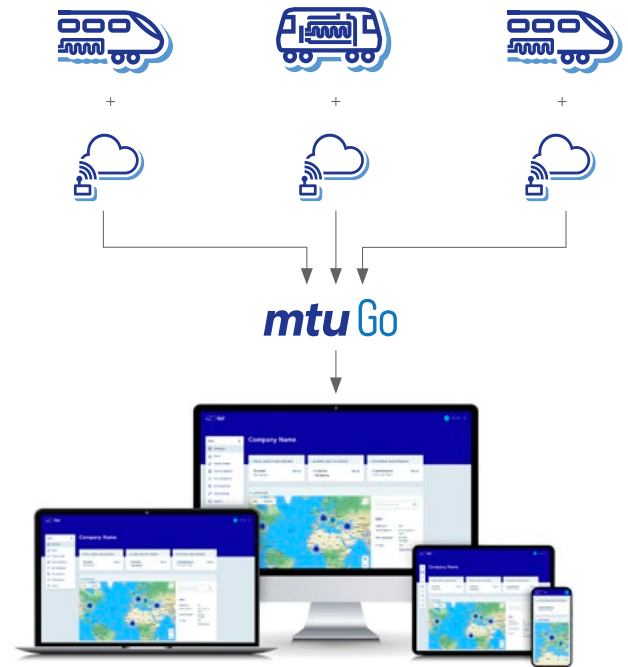

Digital rail solutions

HOW DIGITAL SOLUTIONS OPTIMIZE
YOUR RAIL BUSINESS.

Rail applications have great demands on engines and drive systems. Ensuring that propulsions are constantly available for optimum use, means making the right maintenance decisions. Our digital solutions enable you to keep track of operating hours, system alarms and maintenance schedules so you can plan service intervals more effectively.

mtu Go links your data with our engineering knowledge and experience from thousands of other assets in one global view to provide insights that enrich your business. For details, please scan the QR Code or visit www.mtu-go.com

Delivering actionable insights through digital solutions

Connect all your equipment Data collection from your fleet, asset, system and engine

Connectivity is the basis for all the advantages of digitally supported service. Using our edge software connected to the control unit, you and your service network can monitor relevant deviations from the optimum condition remotely. We offer several ways of collecting data, including the creation of interfaces to already existing data sets. In doing so, we always adhere to the highest data privacy and security standards of our industry.

Access your data

- Remote monitoring, available for individual assets, as well as complete fleets worldwide
- Different device and software options ensure optimal connectivity
- Data privacy and security to the highest industry standards

Monitor your fleet Visualization of data for a quick and accurate overview of your fleet

With the **mtu Go** platform, predefined users, such as on-site technicians or managers, can view the system data and perform initial analyses by using diagnostic tools. By accessing the same information, your service network can provide fast support in handling alarms and planning necessary maintenance together with you. Open APIs allow you to interface directly to your existing dashboards or systems.

Keep track of your data

- All important data and alarms available at a glance for efficient fleet monitoring
- Intuitive and clear design for easy operation
- Visual comparison of data using the diagnostic tools for initial analyses

Manage your fleet Digital solutions for your detailed data analysis on necessary actions

Supported by **mtu Go** your Service Network is able to analyze all relevant data from your equipment and compare it with data sets from other systems. From this we together can proactively derive recommendations for action. In future, the analysis can be enriched with additional external data sets, such as environmental influences or time schedules. Cross-linking data will create new opportunities for optimizing business processes.

Learn from your data (under development)

- Algorithms for proactive early detection of deviations
- Troubleshooting based on large amounts of data with artificial intelligence
- Comparison with data outside own fleet leads for faster knowledge transfer and optimal service tool for initial analyses

Service network

LOCAL SUPPORT.
WORLDWIDE.

Whenever and wherever you need expert support, our specialists are available. Our global service network of more than 1,200 locations – backed by our cutting-edge parts logistics centers – provides you this assurance. To find your local distributor, visit www.mtu-solutions.com.

Local support. Worldwide.

We ensure that you receive individualized support from our global network of more than 1,200 service centers—anywhere, anytime. Local support. Worldwide.

Always on call, 24/7

Whether it's connecting you with a local service partner or assigning an urgent problem to a dedicated team of our experts, we're ready to assist you – wherever you are, whatever you need.

Emission reduction solutions

CLEAN EFFICIENCY.
KEY GREEN TECHNOLOGIES.

Our advanced emission reduction solutions combine key technologies to meet current and future emissions standards as well as reduce fuel consumption. They are designed to ensure smooth system component interaction and clean operational efficiency.

Example based on the Series 4000:
EU Stage IIIB and V with DPF and DOC.
IIIA w/o aftertreatment.

1 Selective catalytic reduction (SCR)

Our SCR solution removes up to 90 percent of nitrogen oxide from exhaust gas. A closed-loop control system prevents ammonia slip during operation. Its fuel and space-efficient design is also very maintenance friendly.

Example based on the PowerPack Series 1600:

EU Stage IIIB with SCR,

EU Stage V with SCR plus DPF and DOC

2 Diesel particulate filter (DPF)

Our diesel particulate filters reduce soot emissions well below statutory limits.

3 Diesel oxidation catalyst (DOC)

Easy to install and highly effective in the breakdown of exhaust pollutants – our diesel oxidation catalysts exceed regulatory standards.

4 Two-stage turbocharging

With our two-stage turbocharging, engines achieve high output across a wide speed range and superb fuel efficiency. Their space-saving engine integration offers additional benefits.

5 Exhaust gas recirculation (EGR)

Modern EGR solutions can reduce nitrogen oxide generation within the cylinder by more than 40%. We have designed a highly compact one that integrates all EGR components. It enables the cost-effective upgrade of rail vehicles for compliance with new emissions standards.

6 Common rail injection

Our common rail injection solutions have been enhancing rail engine combustion processes for over 20 years already, making them especially clean and economical.

EXHAUST EMISSIONS

Many countries have implemented environmental legislation to protect people from consequences of polluted air. For this reason an increasing number of countries regulate emissions from specific mobile and stationary sources.

Emission standards may apply internationally, nationally and/or for specific areas. The enforcement of an emission legislation may depend for example on the area where the equipment is used and the way it is operated. The emission legislations may be categorized by power range and/or cylinder capacity.

Emission legislations generally require a type approval which states compliance. Stationary applications may require on-site approvals (on-site emission test) depending on the particular emission legislation.

Please find as follows examples of emission standards which apply to the rail industry. For details please consult the applicable legislation and/or permitting authority.

- European emission legislation differentiates between locomotive and railcar applications.
- US emission legislation differentiates between line-haul and switch-haul locomotive applications.
- US rail emission legislation is specific for ratings 750 kW and above. For ratings below 750 kW nonroad mobile machinery legislation applies.
- UIC (International railway association) emission standards may be applied when national legislations is not available

Examples for emission level description:

- type approval - e.g. EU Nonroad St V (2016/1628)
- compliant with CoC -
e.g. EU Nonroad St IIIA Comp (97/68/EC)
- compliant without CoC - e.g. EU Nonroad St IIIA Comp

Please note

That the engines and systems (only) comply with country or region specific emission requirements and have appropriate emission certification(s) which are explicitly stated in respective technical specifications. Any export/import/operation of the engine in countries or regions with different applicable emission law requirements is at the customers responsibility.
