# Dell Change Auditor for EMC Overview

- [Introduction](#)
- [System overview](#)
- [Deployment requirements](#)
- [Client components/features](#)

## Introduction

Dell™ Change Auditor for EMC® tracks, audits, reports and alerts on file and folder changes in real time, translating events into simple text and eliminating the time and complexity required by native auditing. The auditing scope can be set on an individual file or folder or an entire file system recursive or non-recursive. Change Auditor for EMC also allows you to include or exclude certain files or folders from the audit scope in order to ensure a faster and more efficient audit process.

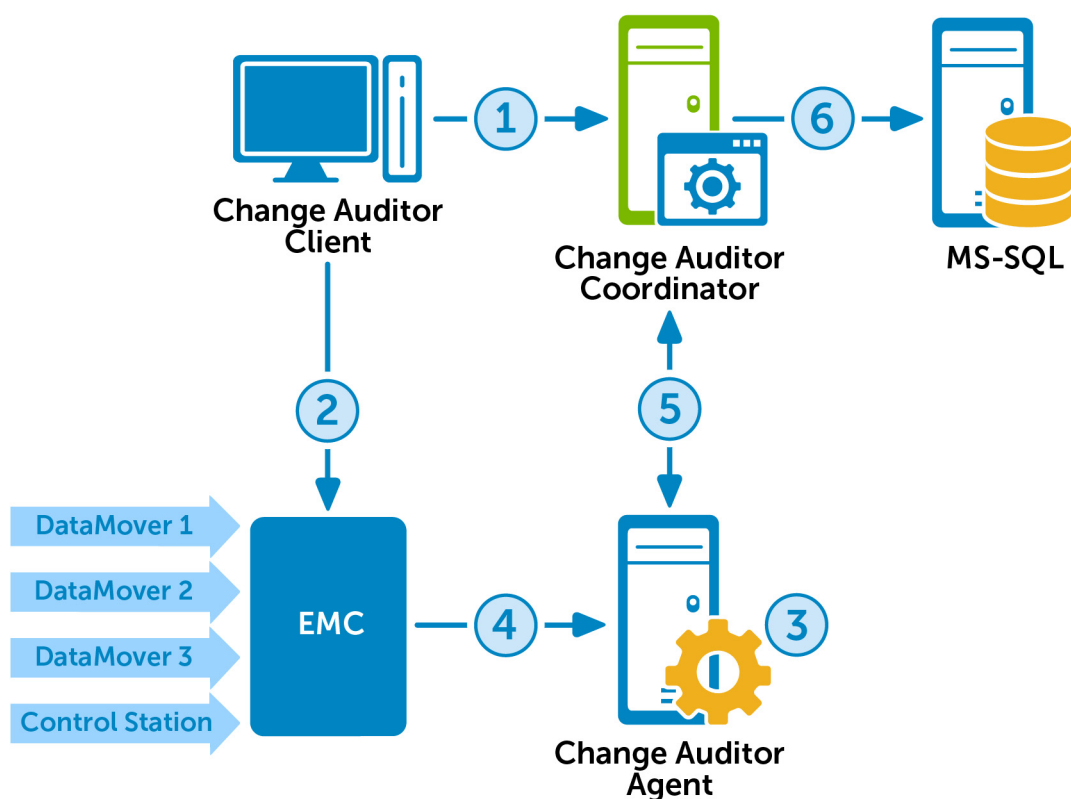

Change Auditor for EMC captures events and provides detailed information relating to the following activities:

- File and folder access
- File and folder creation, deletion and renames
- File and folder permission changes
- Content changes, such as file opens and writes

 **NOTE:** Only EMC® events initiated via a Common Internet File System (CIFS) are captured. EMC events initiated via FTP, NFS or other protocols are not captured.

# System overview

The following diagram illustrates how EMC® Celerra®/VNX® integrates with Change Auditor to provide this auditing capability.

- 1 Using the Change Auditor client, users create an EMC Auditing template to configure the EMC file server (CIFS) location and select the Change Auditor agent that is to receive the EMC events.  
The Change Auditor coordinator is responsible for fulfilling client and agent requests.
- 2 (Optional) The Change Auditor client updates the EMC Control Station to enable auditing using an updated cepp.conf file (optional step in the EMC Auditing wizard).
- 3 The Change Auditor agent registers with the EMC CEE/VEE Framework service to get data related to user operations.
- 4 The EMC Data Mover forwards audit events to the EMC CEE/VEE Framework installed on the Change Auditor agent server.
- 5 The Change Auditor agent processes EMC events and forwards them to the Change Auditor coordinator.
- 6 The Change Auditor coordinator forwards the events and related details to the Change Auditor database.

# Deployment requirements

In order to ensure a successful deployment, ensure that you have the following components and your environment meets the minimum system requirements. For information on Change Auditor system requirements, see the *Dell™ Change Auditor Installation Guide*.

## EMC auditing requirements

### Change Auditor license requirement:

- Change Auditor for EMC 5.6 (or higher)

### Change Auditor agent requirements:

- Locate the Change Auditor agent near the EMC® device (use fastest connection type available).
  - It is recommended to have 1 Gbps network connectivity (or faster connection type) between the monitored EMC device and the computer where the Change Auditor agent service is running. Use a direct or one-switch connection.
- Use a multiple CPU host for Change Auditor agent service (at least 2 CPUs or 2 CPU core).

### EMC requirements:

- EMC Celerra® Event Enabler (CEE) Framework 4.6.7 and 6.x
- EMC VNX® Event Enabler (VEE) Framework 4.8.5 (through 5.1)
  - ❗ **NOTE: VNXe® is not supported:** VNXe does not support CEPA at this time and therefore Change Auditor for EMC will NOT run successfully in VNXe environments.
- EMC Isilon®:
  - CEE 6.3.1 (or higher)
  - Change Auditor for EMC 6.5 (or higher)
  - Requires manual configuration to audit Isilon file servers. See [EMC Isilon Auditing](#).

## Required rights and permissions

- Administrative rights on the EMC Control Station to create or modify the cepp.conf file on the EMC file server (CIFS).
- The computer account where the Change Auditor agent is running must have permissions on the EMC Virus Checking policy.

## Client components/features

The following table lists the client components and features that require a valid Change Auditor for EMC license. The product will not prevent you from using these features; however, associated events will not be captured unless the proper license is applied.

- ❗ **NOTE:** To hide unlicensed Change Auditor features from the Administration Tasks tab (including unavailable audit events throughout the client), use the **Action | Hide Unlicensed Components** menu command. Note this command is only available when the Administration Tasks tab is the active page.

**Table 1. Change Auditor for EMC client components/features**

This document has been prepared to assist you in becoming familiar with Change Auditor for EMC. This User Guide explains the core functionality available in Change Auditor regardless of the product license that has been applied. It is intended for network administrators, consultants, analysts, and any other IT professionals using the product.

**NOTE:** The *Dell™ Change Auditor User Guide* explains the core functionality available in Change Auditor regardless of the product license that has been applied. In addition, there are separate user guides available that describe the additional functionality added to Change Auditor when the different auditing modules are licensed. The supplemental user guides include:

- Dell™ Change Auditor for Active Directory® User Guide
- Dell™ Change Auditor for Active Directory® Queries User Guide
- Dell™ Change Auditor for EMC® User Guide
- Dell™ Change Auditor for Exchange User Guide
- Dell™ Change Auditor for Logon Activity User Guide
- Dell™ Change Auditor for NetApp® User Guide
- Dell™ Change Auditor for SharePoint® User Guide
- Dell™ Change Auditor for SonicWALL™ User Guide
- Dell™ Change Auditor for SQL Server® User Guide
- Dell™ Change Auditor for Windows® File Servers User Guide

# Installation and Configuration

- [Before you begin](#)
- [Step 1: Install EMC Event Enabler Framework](#)
- [Step 2a: Install Change Auditor for EMC](#)
- [Step 2b: Upgrade Change Auditor and license Change Auditor for EMC](#)
- [Step 3: Create EMC Auditing template](#)

## Before you begin

It is recommended that you perform the following steps before you begin the installation procedure:

- Review the Deployment Requirements
- Review the complete installation process
- Read the Change Auditor Release Notes for updated information
- Ensure you have the appropriate license file to enable Change Auditor for EMC

**NOTE:** You should have received separate license files from Dell™ to enable the Change Auditor auditing modules you purchased:

- Dell™ Change Auditor for Active Directory®
- Dell™ Change Auditor for Exchange
- Dell™ Change Auditor for Windows® File Servers
- Dell™ Change Auditor for SQL Server®
- Dell™ Change Auditor for Active Directory® Queries
- Dell™ Change Auditor for Authentication Services
- Dell™ Change Auditor for Defender
- Dell™ Change Auditor for NetApp®
- Dell™ Change Auditor for EMC®
- Dell™ Change Auditor for SharePoint®
- Dell™ Change Auditor for Logon Activity User
- Dell™ Change Auditor for Logon Activity Workstation
- Dell™ Change Auditor for Lync®
- Dell™ Change Auditor for SonicWALL™
- Dell™ Change Auditor for Cloud Storage

Copy the .asc license files to the local hard drive where you are installing Change Auditor.

# Step 1: Install EMC Event Enabler Framework

**NOTE:** This guide only outlines the installation steps that are required in order for Change Auditor for EMC to integrate with the EMC® Event Enabler Framework. For detailed installation steps, see the appropriate guides from EMC Corporation.

- 1 Install the Celerra® Event Enabler Framework (CEE) or VNX® Event Enabler Framework (VEE) on one or more Windows® servers by running the executable compatible with your system architecture:

- emc\_CEE\_Pack\_x64\_<Version>.exe
- emc\_CEE\_Pack\_Win32\_<Version>.exe
- emc\_VEE\_Pack\_x64\_<Version>.exe
- emc\_VEE\_Pack\_Win32\_<Version>.exe

**NOTE:** See the EMC Corporation website (<http://www.emc.com/>) for information on downloading EMC product executables.

These servers must include the ones where you want to monitor EMC activity and must also have a Change Auditor agent installed.

- 2 Install the EMC Celerra Event Publishing Agent (CEPA) Auditing feature.

**NOTE:** At a minimum, you must install the **CEPA Auditing** feature which enables Change Auditor to monitor the file system activity on EMC.

**NOTE:** For Isilon® servers, the installation process is complete. Skip the next two steps.

**NOTE:** Change Auditor for EMC does not support automatic Isilon auditing configuration. See [EMC Isilon Auditing](#) for more information on the manual configuration required.

- 3 You must create a configuration file (cepp.conf file) before using the CEPA auditing feature. The cepp.conf file contains the information needed to connect Data Movers to the Windows computers where the CEE/VEE software is installed. You can either manually create the cepp.conf file now or use the Change Auditor client to create this configuration file later.
- 4 If you manually created the cepp.conf file, start the CEPA facility and then verify that it has started. Use the following command syntax to start the CEPA facility and to check its status:
  - \$ server\_cepp <DataMoverName> -service -start
  - \$ server\_cepp <DataMoverName> -service -status

## Step 2a: Install Change Auditor for EMC

**NOTE:** For detailed instructions and required permissions for installing Change Auditor, see the *Dell™ Change Auditor Installation Guide*.

If you do not have a previous version of Change Auditor already installed, we recommend installing the Change Auditor components in the following order:

- 1 Database (SQL Server®)

Choose the SQL database you are going to use. If you wish to install the Change Auditor database to a SQL instance other than the default instance of the selected SQL server, create the new instance **BEFORE** running the installer.

- 2 Change Auditor coordinator

Once you have confirmed that the database instance you are going to use is installed and functioning correctly, install the Change Auditor coordinator.

**NOTE:** Change Auditor will prompt you for a valid license during the coordinator installation. If you are installing multiple Change Auditor products, select each of the licenses to be applied.

You must apply the Change Auditor for EMC license to enable the EMC® auditing in Change Auditor.

### 3 Change Auditor client

Once you have confirmed that the coordinator is functioning correctly, install the Change Auditor client.

### 4 Change Auditor agents

Launch the Change Auditor client to deploy agents to your domain controllers and member servers.

**NOTE:** Be sure to select the server(s) where the CEPA Auditing feature was previously installed.

## Step 2b: Upgrade Change Auditor and license Change Auditor for EMC

**NOTE:** For detailed instructions on upgrading Change Auditor, see the *Dell™ Change Auditor Installation Guide*.

If you have a previous version of Change Auditor already installed, upgrade the Change Auditor components in the following order:

#### 1 Change Auditor coordinator (and database schema)

##### **NOTE: Change Auditor Upgrade**

If you are upgrading from Change Auditor 6.0 and already have Change Auditor for EMC licensed, you will NOT require new licenses for any of your Change Auditor products.

However, if Change Auditor for EMC is new to your installation, you must apply the Change Auditor for EMC license before you can use the product. You can apply this new license at this time or at a later time using the Change Auditor License Manager.

#### 2 Change Auditor client

#### 3 Change Auditor agents

**NOTE:** Be sure to select the server(s) where the CEPA Auditing feature was previously installed.

## Step 3: Create EMC Auditing template

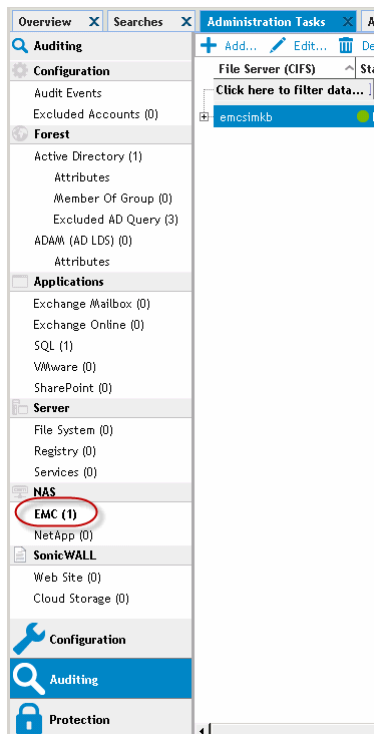

The cepp.conf file contains the information needed to connect Data Movers to the Windows® computers where the CEE/VEE software is installed. Use the Change Auditor client to create this configuration file.

**NOTE:** If you manually created the cepp.conf file earlier, you can use the Change Auditor client to update the configuration file. More specifically, it will add a 'quest servers' pool name entry to the existing configuration file specifying the Change Auditor agents assigned to receive the EMC® events.

Using the Change Auditor client, define a separate EMC Auditing template for each EMC file server (CIFS) to be audited.

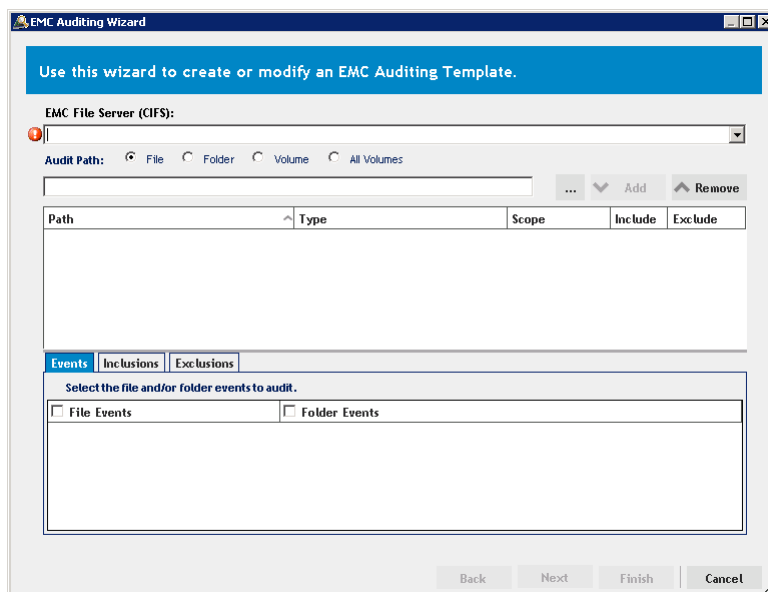

### To create an EMC Auditing template:

- 1 Open the Administration Tasks tab (View | Administration).
- 2 Select the Auditing task button at the bottom of the navigation pane (left pane).
- 3 Select EMC in the Auditing | NAS task list to open the EMC Auditing page.

- 4 Click the Add tool bar button.

This will launch the EMC Auditing wizard, which steps you through the process of defining the EMC file server (CIFS) to be audited, the auditing scope, and the Change Auditor agent(s) that are to receive the EMC events.

For this scenario, we will specify to audit all events on all volumes.

- 5 On the first page of the wizard, enter the following information:
- **EMC File Server (CIFS)** - Select the EMC file server (CIFS) from the drop-down list. Or enter the Netbios name or IP address of the EMC file server (CIFS) to be audited.
  - **Audit Path** - select **All Volumes** and then click the **Add** button. (The Audit Path will contain an \*, which will be displayed as (All Volumes) in the Audit Path list when the **Add** button is clicked.)
    - ① **NOTE:** Isilon® file server auditing: Volume auditing is not supported and should not be used. Select **File** or **Folder** as the Audit Path. See [EMC Isilon Auditing](#) for more information.
  - **Events tab** - Select both the **File Events** and **Folder Events** check boxes (in the header) to select all events.
  - **Inclusions tab** - Click on the Inclusions tab, enter \* and click the **Add** button to add it to the Included Names list. (Specifying an \* will include all subfolders and files in the selected audit path.)
  - **Exclusions tab** - Skip the Exclusions tab. (In this scenario, we will not be excluding any subfolders or files from auditing.)

Click **Next** to continue.

- ① **NOTE:** See [EMC Auditing](#) for more information on how to audit individual files, folders and volumes as well as how to include or exclude subfolders or files from auditing.

- 6 On the second page of the wizard, select one or more Change Auditor agents to be used to connect to the EMC file server (CIFS) to receive the EMC events.

- ① **TIP:** Specifying multiple agents may provide better performance because the EMC server will load balance audit events and send each assigned agent events round-robin style. However, the downside is that the 'where' field for EMC events may contain any one of these agents. Also, if EMC event logging is enabled, events will be written on multiple agent servers.

To add a Change Auditor agent to the EMC Auditing template:

- Click the **Add** button.
- On the Eligible Change Auditor Agents dialog, select one or more agents from the list and click **OK**.
- ① **NOTE:** If you manually created the cepp.conf file AND it already specifies the Change Auditor agents responsible for capturing EMC events, proceed to [Step 10](#). However, if you did NOT manually create the cepp.conf file OR if the Change Auditor agents that are to capture EMC events are not already specified in the file (pool name=quest servers entry), proceed with [Step 7](#).
- ① **NOTE:** Isilon file server auditing: There is no need to enter the EMC Control Station credentials when configuring auditing on an Isilon server. Skip to [Step 10](#).

- 7 On the Logon Credentials dialog enter the following information:

- **Control Station** - enter the IP address of the EMC Control Station.
- **User** - enter the user name of an account with Administrative rights (rights to create or modify the cepp.conf file) on the selected EMC Control Station.
- **Password** - enter the password associated with the user name entered above.
- **Data Mover** - select the data mover that hosts the EMC file server (CIFS) specified on the first page of the wizard.

Click the **Test** button to validate the credentials entered. Once the credentials are validated, click **OK** to set the credentials as entered and close the dialog.

- 8 The required cepp.conf file will be created based on the information specified in the EMC Auditing wizard. Click **Next** to view the current settings in the cepp.conf file.
- 9 On the last page of the wizard, review the proposed cepp.conf file, which is displayed in the bottom pane.

Use the buttons above the **Current cepp.conf File** text box, as described below:

- To deploy the proposed configuration file, click **Update File**.
  - To check the current status of the cepp service, click **Check Status**.
  - To audit the cepp.conf file checking for modifications made by another application, click **Audit File**. Select the **Enable Auditing** check box, review (and if necessary change) the polling interval, and select the Change Auditor agent to be used to poll this configuration file. Click **OK** to save your selections and close the dialog.
- 10 Click **Finish** to close the wizard and create the EMC Auditing template.
  - 11 On the Administration Tasks tab, click the **Configuration** task button at the bottom of the navigation pane. Select **Agent** in the Configuration task list to open the Agent Configuration page.
  - 12 Select the Change Auditor agent(s) assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command. This will ensure the agent(s) are using the latest configuration.

 **NOTE:** If you do not refresh the agent's configuration, the agent will automatically check for a new agent configuration based on the polling interval setting (located on the System Settings tab of the Configuration Setup dialog). The default is every 15 minutes.

In addition to defining the EMC file server (CIFS) to be audited and the Change Auditor agent(s) that are to receive these events, completing this step also installs the Dell Shared EMC Connector service (QCeeService). This service enables auditing of EMC devices by multiple Dell software products. This service is required because EMC supports only one auditing pool at a time.

# Getting Started

- [Introduction](#)
- [Verify license is applied](#)
- [Verify auditing template is applied](#)
- [Make changes and run a report](#)
- [Troubleshooting steps](#)

## Introduction

Change Auditor for EMC provides you with the ability to search, report and alert on changes to a specific file, folder, volume or all volumes on an EMC® NAS. Using Change Auditor for EMC you can receive real-time alerts whenever someone tries to access a secure file, folder or volume on an EMC file server.

This chapter provides a high-level view of the tasks to get you started using Change Auditor for EMC. It assumes you have successfully installed/licensed Change Auditor for EMC and the EMC Celerra® Event Enabler (CEE) Framework or EMC VNX® Event Enabler (VEE) Framework.

## Verify license is applied

EMC® auditing is only available if you have licensed the Change Auditor for EMC product. Change Auditor will not prevent you from using these features; however, associated events will not be captured unless the proper license is applied.

***To verify that Change Auditor for EMC is licensed:***

- 1 From the member server where Change Auditor is installed, launch the License Manager (**Start | All Programs | Dell | Change Auditor | License Manager**).
- 2 On the About Change Auditor dialog, verify that the **License Status** field is set to 'Installed' for Change Auditor for EMC.
- 3 If the **License Status** field indicates that Change Auditor for EMC is 'Uninstalled', click the **Update License** button to locate and apply the appropriate license.

## Verify auditing template is applied

To ensure EMC® events are being captured, check to see if the Change Auditor agent assigned to the EMC Auditing template is using the latest agent configuration.

***To verify that latest agent configuration is being used:***

- 1 Launch the Change Auditor client (**Start | All Programs | Dell | Change Auditor | Change Auditor Client**).

- 2 Open the Administration Tasks tab (**View | Administration** menu command).
- 3 If not already selected, click the **Configuration** task button at the bottom of the navigation pane (left-hand pane).
- 4 Select **Agent** in the Configuration task list to open the Agent Configuration page.
- 5 Select the Change Auditor agent assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command.

## Make changes and run a report

- 1 To test EMC® auditing, make some changes to the EMC Celerra®/VNX® NAS being monitored.  
For example:
  - create a new folder
  - add a new .txt or .docx file in this folder
  - change the security permissions on a file (right-click file, open the Security tab and add another user with full control)
  - delete the sample .txt file
  - add a sub-folder
  - change the security permission of the new folder
- 2 Launch the Change Auditor client (**Start | All Programs | Dell | Change Auditor | Change Auditor Client**) to review the events generated.
- 3 Open the Searches tab.
- 4 Expand the **Shared | Built-in | All Events** folder in the left-hand pane.
- 5 Locate and double-click **All EMC Events** in the right-hand pane.  
A new Search Results tab is added to the client displaying the EMC events that were captured.
- 6 Select an event from the Search Results grid to display the event details for the selected event.

 **NOTE:** If the Search Properties tabs are displayed across the bottom of the Search Results page, double-click an event to display the event details for the selected event.

## Troubleshooting steps

If the EMC® events do not appear in the Change Auditor client as expected, check the following:

- Verify that the CEPA (EMC CAVA agent service) is running on the Windows Server® where the EMC events are being collected.
- Verify that the Dell Shared EMC Connector service (QCeeService) is running.
- Use the following command to verify that the CEPP service on the EMC Data Mover is running and is in the state of ONLINE:

```
server_cepp <DataMoverName> -p -i
```

If the CEPP service is OFFLINE, restart the EMC CAVA agent service on the Windows Server. If that does not work, restart the EMC CEPP service on the Data Mover using the following commands:

```
server_cepp <DataMoverName> -service -stop
server_cepp <DataMoverName> -service -start
```

- Verify that the EMC file server (CIFS) is valid on the first page of the EMC Auditing wizard. The **EMC File Server (CIFS)** field should contain the IP address or Netbios name of the CIFS to be audited.

- Verify that you have selected those type of events in the EMC Auditing template. (Events tab in wizard.)
- Verify that you have included the correct subfolders and paths in the EMC Auditing template. (Inclusions tab in wizard.)

 | **NOTE:** Entering \* will include all subfolders and paths.

- Verify that you have not excluded the specified subfolders or paths in the EMC Auditing template. (Exclusions tab in wizard.)
- If you set the credentials on the second page of the wizard, verify that you have selected the correct Data Mover for the selected CIFS.
- Refresh the specified Change Auditor agent configurations on the Agent Configuration page to ensure the latest EMC Auditing template is being used.

# EMC Auditing

- [Introduction](#)
- [EMC Auditing page](#)
- [EMC Auditing templates](#)
- [EMC Auditing wizard](#)
- [File System events settings](#)
- [EMC event logging](#)

## Introduction

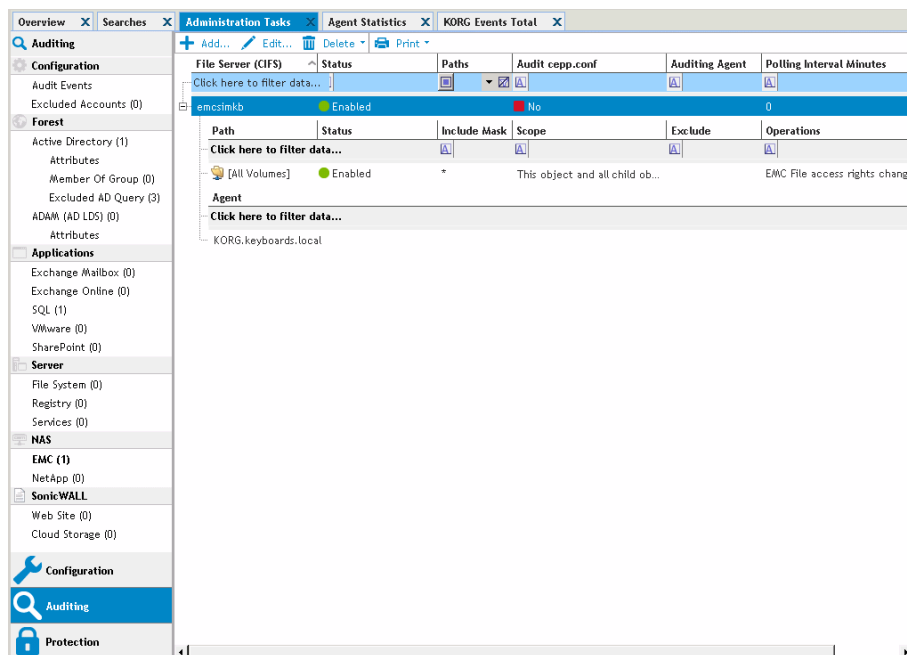

A separate EMC® Auditing template must be defined for each EMC file server (CIFS) to be audited by Change Auditor. The EMC Auditing page on the Administration Tasks tab displays details about each EMC Auditing template created and allows you to add new auditing templates.

This chapter provides a description of the EMC Auditing page and EMC Auditing wizard which walks you through the process of creating a new auditing template. It also explains the File System Event settings available on the Configuration Setup dialog which can be used to define how to process duplicate File System events. For a description of the dialogs mentioned in this chapter, refer to the online help. For more information about agent configurations, refer to the *Dell™ Change Auditor User Guide*.

## EMC Auditing page

The EMC Auditing page is displayed when **EMC** is selected from the Auditing task list in the navigation pane of the Administration Tasks tab. From this page you can launch the EMC Auditing wizard to specify the EMC® file server (CIFS) to be audited, the auditing scope and the Change Auditor agent(s) that are to receive the EMC events. You can also edit existing templates, disable/enable templates, and remove templates that are no longer being used.

- ① **NOTE:** Authorization to use the administration tasks on the Administrations Tasks tab is defined using the Application User Interface page under the Configuration task list. If you are denied access to the tasks on this page, refer to the *Dell™ Change Auditor User Guide* for more information on how to gain access.

The EMC Auditing page contains an expandable view of all the EMC Auditing templates that have been previously defined. To add a new template to this list, use the **Add** tool bar button. Once added, the following information is provided for each template:

### File Server (CIFS)

Displays the name of the EMC file server (CIFS) specified in the wizard.

### Status

Indicates whether the auditing template is enabled or disabled.

### Paths

This field is used for filtering data.

### Audit cepp.conf

Indicates whether you have selected to audit the cepp.conf file for changes made by other third-party applications.

**NOTE:** This field does not apply to Isilon<sup>®</sup> file server auditing.

### Auditing Agent

Displays the name of the Change Auditor agent assigned to audit the cepp.conf file.

**NOTE:** This field will be blank if the **Audit cepp.conf** field is set to **No**.

### Polling Interval Minutes

Displays the polling interval specified when auditing of the cepp.conf file is enabled.

**NOTE:** This field will be blank if the **Audit cepp.conf** field is set to **No**.

**NOTE:** This field does not apply to Isilon file server auditing.

Click the expansion box to the left of the EMC file server (CIFS) name to expand this view and display the following details:

#### Path

Displays the name of the audit path(s) included in the EMC Auditing template.

#### Status

Indicates whether auditing for the selected audit path is enabled or disabled.

#### Include Mask

Displays the names of the subfolders or files to be audited (or a file mask) as specified on the Inclusions tab of the wizard.

#### Scope

Indicates the scope of coverage specified for each audit path in the selected template:

- This object only
- This object and child objects only
- This object and all child objects

#### Exclude

Displays the names and paths of subfolders and files to be excluded from auditing as specified on the Exclusions tab of the wizard.

#### Operations

Displays the events selected for auditing on the Events tab of the wizard. Hover your mouse over this cell to view all of the events included in the template.

#### Agent

Lists the Change Auditor agents assigned to receive the EMC events from the selected EMC file server (CIFS).

**NOTE:** The cells directly under the main heading rows are used for filtering data. That is, as you enter characters into these cells, the client will redisplay the templates that meet the search criteria (i.e., comparison operator and characters entered). For more details about using the data filtering function provided throughout the Change Auditor client, see the *Dell™ Change Auditor User Guide*.

## EMC Auditing templates

In order to enable EMC auditing in Change Auditor, you must first create an EMC® Auditing template for each EMC file server (CIFS) to be audited. Each auditing template defines the location of the EMC file server to be audited, the auditing scope, and the Change Auditor agent(s) that are to receive the EMC events.

**NOTE:** There can be only one EMC Auditing template per EMC file server (CIFS). If you want to audit multiple audit paths, use the same template to specify all the audit paths to be audited on the selected EMC file server.

#### To audit a file:

- 1 Launch the EMC Auditing wizard (Click **Add** or **Edit** tool bar button on EMC Auditing page).
- 2 On the first page of the wizard, enter the following information:
  - **EMC File Server (CIFS)** - Select the EMC file server (CIFS) from the drop-down list. Or enter the Netbios name or IP address of the EMC file server (CIFS) to be audited.

- **Audit Path** - Select **File**. Enter a file name and path (i.e., <ShareName>\<Path>\<FileName>) to be audited or click the browse button  to locate and select a file. Click the **Add** button to move the specified audit path to the selection list.

 **NOTE: Isilon® file server auditing:** When specifying file and folder paths to be audited, start with the file system root (ifs/) and the file system path. Do not use SMB/CIFS share names in a file or folder path.

- **Events tab** - Select the file events to be audited for the file selected in the selection list.

 **NOTE:** Selecting the **File Events** check box at the top of the events list on the Events tab will select all of the events listed. Similarly, clearing this check box will clear all of the selected events.

Repeat this step to add additional files to this auditing template.

- 3 Click **Next** to proceed to the next page.
- 4 On the second page of the wizard, select the Change Auditor agents to be used to connect to the EMC file server to capture the EMC events.

To add a Change Auditor agent to the EMC Auditing template:

- Click the **Add** button
- On the Eligible Change Auditor Agents dialog, select one or more agents from the list and click **OK**.

If the Change Auditor agents that are to capture EMC events are not already specified in the cepp.conf file (pool namesakes servers entry), you'll need to enter the credentials to be used to access the EMC Control Station.

 **NOTE: Isilon file server auditing:** There is no need to enter the EMC Control Station credentials when configuring auditing on an Isilon server. Skip to [Step 6](#).

Click the **Set Credentials** button and enter the following information:

- **Control Station** - enter the IP address of the EMC Control Station.
- **User** - enter the user name of an account with Administrative rights (rights to create or modify the cepp.conf file) on the selected EMC Control Station.
- **Password** - enter the password associated with the user name entered above.
- **Data Mover** - select the data mover that hosts the CIFS file server specified on the first page of the wizard.

Click the **Test** button to validate the credentials entered. Once the credentials are validated, click **OK** to set the credentials as entered and close the dialog.

The required cepp.conf file will be created based on the information specified in the EMC Auditing wizard. Click **Next** to view the current and proposed settings for the cepp.conf file.

- 5 On the last page of the wizard, review the proposed cepp.conf file, which is displayed in the bottom pane.

Use the buttons above the **Current cepp.conf File** text box, as described below:

- To deploy the proposed configuration file, click **Update File**.
- To check the current status of the cepp service, click **Check Status**.
- To audit the cepp.conf file checking for modifications made by another application, click **Audit File**. Select the **Enable Auditing** check box, review (and if necessary change) the polling interval, and select the Change Auditor agent to be used to poll this configuration file. Click **OK** to save your selections and close the dialog.

- 6 Click the **Finish** button to close the wizard and create the EMC Auditing template.

- 7 On the Administration Tasks tab, click the **Configuration** task button at the bottom of the navigation pane. Select **Agent** in the Configuration task list to open the Agent Configuration page.
- 8 Select the Change Auditor agent(s) assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command. This will ensure the agent(s) are using the latest configuration.

**NOTE:** If you do not refresh the agent's configuration, the agent will automatically check for a new agent configuration based on the polling interval setting (located on the System Settings tab of the Configuration Setup dialog). The default is every 15 minutes.

#### **To audit a folder:**

- 1 Launch the EMC Auditing Wizard. (Click **Add** or **Edit** tool bar button on EMC Auditing page.)
- 2 On the first page of the wizard, enter the following information:
  - **EMC File Server (CIFS)** - Select the EMC file server (CIFS) from the drop-down list. Or enter the Netbios name or IP address of the EMC file server (CIFS) to be audited.
  - **Audit Path** - Select **Folder**. Enter a folder name and path (i.e., <ShareName>\<FolderName>) to be audited or click the browse button  to locate and select a folder.

**NOTE: Isilon file server auditing:** When specifying file and folder paths to be audited, start with the file system root (ifs/) and the file system path. Do not use SMB/CIFS share names in a file or folder path.

Click the **Add** button to add the specified folder to the Selection list (middle of the page).

- 3 By default, the scope of coverage for the selected folder will be **This object and all child objects**. However, you can change the scope, by selecting a different option from the drop-down box in the scope cell of the selection list:
  - **This object only** - select this option to audit only the selected folder, not its files or subfolders.
  - **This object and child objects only** - select this option to audit the selected folder and its direct files and subfolders. This is not recursive.
  - **This object and all child objects** - select this option to audit this folder and all of its files and subfolders.

In addition, when the folder entry is selected in the Selection list, the tabs across the bottom of the page are activated. The settings specified on these tabs apply to the entry selected.

- 4 On the Events tab, select the file and folder events to be audited.
 

**NOTE:** Selecting the **File Events** or **Folder Events** check box at the top of the events list on the Events tab will select all of the events listed. Similarly, clearing these check boxes will clear all of the selected events.

- 5 On the Inclusions tab, specify file masks to audit.

**NOTE:** Do NOT use the Inclusion tab to add additional subfolder paths onto the monitored base path (audit path specified above). It is meant to specify an inclusion mask for **ONLY** objects located under the monitored base path.

Enter a file mask to specify what is to be included in the audit. The file mask can contain any combination of the following:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
- Asterisk (\*) wildcard character to substitute zero or more characters.
- Question mark (?) wildcard character to substitute a single character.

For example, entering \* will include all subfolders and files in the selected audit path.

You can also enter the name of an individual subfolder or file to be audited. However, if you enter the name of a subfolder, you will only receive events for operations performed against the specified

subfolder. You will NOT receive events for operations performed against any child objects under the specified subfolder.

Once you have specified the subfolders/files to be included, click the **Add** button to add it to the Inclusion list at the bottom of the page.

Repeat this step to add additional subfolders and files to the Inclusion list.

- 6 (Optional) On the Exclusions tab, specify the names and paths of any subfolders or files in the selected audit path that are to be excluded from auditing.

Enter a file mask to specify the name and path of subfolders and files to be excluded from auditing. The file mask can contain any combination of the following:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
- Asterisk (\*) wildcard character to substitute zero or more characters. Use a single asterisk (\*) to specify a non-recursive match (i.e., find match in the folder only; does not match any slash characters (\)). Use a double asterisk (\*\*) to specify a recursive match (i.e., find match in the folder and all subfolders in audit path; matches slash characters (\) and directory names in paths).
- Question mark (?) wildcard character to substitute a single character. The ? wildcard character does not match slash (\) characters.

For example, entering \*.log will exclude all files in the audit folder with the .log file extension. Whereas, entering \*\*.log will exclude all files with the .log file extension found in the audit folder or in any subfolders.

You can also enter the name of an individual subfolder or file to be excluded.

 **IMPORTANT:** If you enter the name of a subfolder or file that is outside of the audited path, Change Auditor will NOT exclude it from auditing.

Once you have specified a subfolder or file for exclusion, use the appropriate **Add** command to add it to the Exclusion list at the bottom of the page:

- **Add | Folder** - use this option to exclude activity against files/subfolders in any folders that match the exclusion string.
- **Add | File** - use this option to exclude activity against any files that match the exclusion string.

Repeat this step to add additional subfolders and files to the Exclusion list.

Click **Next**.

- 7 On the second page of the wizard, select the Change Auditor agents to be used to monitor the EMC file server.
  - Click the **Add** button.
  - On the Eligible Change Auditor Agents dialog, select one or more agents from the list and select **OK**.

If the Change Auditor agents that are to capture EMC events are not already specified in the cepp.conf file (pool name=quest servers entry), you'll need to enter the credentials to be used to access the EMC Control Station.

 **NOTE: Isilon file server auditing:** There is no need to enter the EMC Control Station credentials when configuring auditing on an Isilon server. Skip to [Step 9](#).

Click the **Set Credentials** button and enter the following information:

- **Control Station** - enter the IP address of the EMC Control Station.
- **User** - enter the user name of an account with Administrative rights (rights to create or modify the cepp.conf file) on the selected EMC Control Station.
- **Password** - enter the password associated with the user name entered above.

- **Data Mover** - select the data mover that hosts the CIFS file server specified on the first page of the wizard.

Click the **Test** button to validate the credentials entered. Once the credentials are validated, select **OK** to set the credentials as entered and close the dialog.

The required cepp.conf file will be created based on the information specified in the EMC Auditing wizard. Click **Next** to view the current and proposed settings for the cepp.conf file.

- 8 On the last page of the wizard, review the proposed cepp.conf file, which is displayed in the bottom pane.

Use the buttons above the **Current cepp.conf File** text box, as described below:

- To deploy the proposed configuration file, click **Update File**.
- To check the current status of the cepp service, click **Check Status**.
- To audit the cepp.conf file checking for modifications made by another application, click **Audit File**. Select the **Enable Auditing** check box, review (and if necessary change) the polling interval, and select the Change Auditor agent to be used to poll this configuration file. Click **OK** to save your selections and close the dialog.

- 9 Click the **Finish** button to close the wizard and create the EMC Auditing template.
- 10 On the Administration Tasks tab, click the **Configuration** task button at the bottom of the navigation pane. Select **Agent** in the Configuration task list to open the Agent Configuration page.
- 11 Select the Change Auditor agent(s) assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command. This will ensure the agent(s) are using the latest configuration.

**NOTE:** If you do not refresh the agent's configuration, the agent will automatically check for a new agent configuration based on the polling interval setting (located on the System Settings tab of the Configuration Setup dialog). The default is every 15 minutes.

#### **To audit a volume:**

**NOTE:** Isilon file server auditing: Volume auditing is not support and should not be used.

- 1 Launch the EMC Auditing Wizard. (Click **Add** or **Edit** tool bar button on EMC Auditing page.)
- 2 On the first page of the wizard, enter the following information:
  - **EMC File Server (CIFS)** - Select the EMC file server (CIFS) from the drop-down list. Or enter the Netbios name or IP address of the EMC file server (CIFS) to be audited.
  - **Audit Path** - Select **Volume**. Enter a volume name (i.e., <VolumeName>) to be audited or click the browse button  to locate and select a volume.

**NOTE:** Volume names are case sensitive and must be entered correctly in the **Audit Path** field.

Click the **Add** button to add the specified volume to the Selection list (middle of the page).

- 3 By default, the scope of coverage for the selected volume will be **This object and all child objects**, which cannot be changed.

Select the volume entry in the Selection list to activate the tabs across the bottom of the page. The settings specified on these tabs apply to the entry selected.

- 4 On the Events tab, select the file and folder events to be audited.

**NOTE:** Selecting the **File Events** or **Folder Events** check box at the top of the events list on the Events tab will select all of the events listed. Similarly, clearing these check boxes will clear all of the selected events.

- 5 On the Inclusions tab, specify the file masks to audit.

 **NOTE:** Do NOT use the Inclusion tab to add additional subfolder paths onto the monitored base path (audit path selected above). It is meant to specify an inclusion mask for ONLY objects located under the monitored base path.

Enter a file mask to specify what is to be included in the audit. The file mask can contain any combination of the following:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
- Asterisk (\*) wildcard character to substitute zero or more characters.
- Question mark (?) wildcard character to substitute a single character.

For example, entering \* will include all subfolders and files in the selected audit path.

You can also enter the name of an individual subfolder or file to be audited. However, if you enter the name of a subfolder, you will only receive events for operations performed against the specified subfolder. You will NOT receive events for operations performed against any child objects under the specified subfolder.

Once you have specified the subfolders/files to be included, click the **Add** button to add it to the Inclusion list at the bottom of the page.

Repeat this step to add additional subfolders and files to the Inclusion list.

- 6 (Optional) On the Exclusions tab, specify the names and paths of any subfolders or files in the selected audit path to be excluded from auditing.

Enter a file mask to specify the name and path of subfolders and files to be excluded from auditing. The file mask can contain any combination of the following:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
- Asterisk (\*) wildcard character to substitute zero or more characters. Use a single asterisk (\*) to specify a non-recursive match (i.e., find match in the folder only; does not match any slash characters (\)). Use a double asterisk (\*\*) to specify a recursive match (i.e., find match in the folder and all subfolders in audit path; matches slash characters (\) and directory names in paths).
- Question mark (?) wildcard character to substitute a single character. The ? wildcard character does not match slash (\) characters.

For example, entering \*.log will exclude all files in the audit folder with the .log file extension.

Whereas, entering \*\*.log will exclude all files with the .log file extension found in the audit folder or in any subfolders.

You can also enter the name of an individual subfolder or file to be excluded.

 **IMPORTANT:** If you enter the name of a subfolder or file that is outside of the audited path, Change Auditor will NOT exclude it from auditing.

Once you have specified a subfolder or file for exclusion, use the appropriate **Add** command to add it to the Exclusion list at the bottom of the page:

- **Add | Folder** - use this option to exclude activity against files/subfolders in any folders that match the exclusion string.
- **Add | File** - use this option to exclude activity against any files that match the exclusion string.

Repeat this step to add additional subfolders and files to the Exclusion list.

Click **Next**.

- 7 On the second page of the wizard, select the Change Auditor agents to be used to monitor the EMC file server.
  - Click the **Add** button.

- On the Eligible Change Auditor Agents dialog, select one or more agents from the list and click **OK**.

If the Change Auditor agents that are to capture EMC events are not already specified in the cepp.conf file (pool name=quest servers entry), you'll need to enter the credentials to be used to access the EMC Control Station.

Click the **Set Credentials** button and enter the following information:

- **Control Station** - enter the IP address of the EMC Control Station.
- **User** - enter the user name of an account with Administrative rights (rights to create or modify the cepp.conf file) on the selected EMC Control Station.
- **Password** - enter the password associated with the user name entered above.
- **Data Mover** - select the data mover that hosts the CIFS file server specified on the first page of the wizard.

Click the **Test** button to validate the credentials entered. Once the credentials are validated, click **OK** to set the credentials as entered and close the dialog.

The required cepp.conf file will be created based on the information specified in the EMC Auditing wizard. Click **Next** to view the current and proposed settings for the cepp.conf file.

- 8 On the last page of the wizard, review the proposed cepp.conf file, which is displayed in the bottom pane.

Use the buttons above the **Current cepp.conf File** text box, as described below:

- To deploy the proposed configuration file, click **Update File**.
- To check the current status of the cepp service, click **Check Status**.
- To audit the cepp.conf file checking for modifications made by another application, click **Audit File**. Select the **Enable Auditing** check box, review (and if necessary change) the polling interval, and select the Change Auditor agent to be used to poll this configuration file. Click **OK** to save your selections and close the dialog.

- 9 Click the **Finish** button to close the wizard and create the EMC Auditing template.
- 10 On the Administration Tasks tab, click the **Configuration** task button at the bottom of the navigation pane. Select **Agent** in the Configuration task list to open the Agent Configuration page. This will ensure the agent(s) are using the latest configuration.
- 11 Select the Change Auditor agent(s) assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command.

**NOTE:** If you do not refresh the agent's configuration, the agent will automatically check for a new agent configuration based on the polling interval setting (located on the System Settings tab of the Configuration Setup dialog). The default is every 15 minutes.

### ***To disable an auditing template:***

The disable feature allows you to temporarily stop auditing the specified audit path without having to remove the auditing template or individual audit path from a template.

- 1 On the EMC Auditing page, use one of the following methods to disable an auditing template:
  - Place your cursor in the **Status** cell for the template to be disabled, click the arrow control and select **Disabled**.
  - Right-click the template to be disabled and select **Disable**.

The entry in the **Status** column for the template will change to 'Disabled'.

- 2 To re-enable the auditing template, use the **Enable** option in either the **Status** cell or right-click menu.

### ***To disable the auditing of an audit path in a template:***

- 1 On the EMC Auditing page, use one of the following methods to disable an audit path in an auditing template:
  - Place your cursor in the **Status** cell for the audit path to be disabled, click the arrow control and select **Disabled**.
  - Right-click the audit path to be disabled and select **Disable**.

The entry in the **Status** column for the selected file path will change to 'Disabled'.

- 2 To re-enable the auditing of an audit path, use the **Enable** option in either the **Status** cell or right-click menu.

### ***To delete an auditing template:***

- 1 On the EMC Auditing page, use one of the following methods to delete a template:
  - Select the template to be deleted and click the **Delete | Delete Template** tool bar button.
  - Right-click the template to be deleted and select **Delete**.
- 2 A dialog will be displayed confirming that you want to delete the selected template. Click **Yes**.

### ***To delete an audit path from a template:***

 **NOTE:** In EMC Auditing templates, you cannot delete the last audit path.

- 1 On the EMC Auditing page, use one of the following methods to delete an audit path from an auditing template:
  - Select the audit path to be deleted and click the **Delete | Delete File Path** tool bar button.
  - Right-click the audit path to be deleted and select **Delete**.
- 2 A dialog will be displayed confirming that you want to delete the selected file path from the template. Click **Yes**.

### ***To delete a Change Auditor agent from a template:***

 **NOTE:** In EMC Auditing templates, you cannot delete the last Change Auditor agent.

- 1 On the EMC Auditing page, use one of the following methods to delete a Change Auditor agent from an auditing template:
  - Select the Change Auditor agent to be deleted and click the **Delete | Delete Agent** tool bar button.
  - Right-click the agent to be deleted and select **Delete**.
- 2 A dialog will be displayed confirming that you want to delete the selected agent from the template. Click **Yes**.

## **EMC Auditing wizard**

The EMC Auditing wizard is displayed when you click the **Add** tool bar button on the EMC Auditing page. This wizard steps you through the process of creating a new EMC® auditing template, specifying the EMC file server (CIFS) to be audited, the auditing scope and the Change Auditor agent(s) that are to receive the EMC events.

The following table provides a description of the fields and controls in the EMC Auditing wizard:

 **NOTE:** A red flashing icon indicates that you have not yet entered the required information. Hovering your cursor over this icon displays a tool tip explaining what needs to be entered. A green check mark indicates that the required information has been specified and you are ready to proceed.

**Table 2. EMC Auditing wizard**

### Create or modify an EMC Auditing Template page

On the first page of the wizard, specify the EMC file server (CIFS) to be audited and define the auditing scope.

#### EMC File Server (CIFS)

Select the EMC file server (CIFS) to be audited from the drop-down list. Or enter the name of the EMC file server to be audited by Change Auditor.

**NOTE:** The drop-down list contains the CIFS servers published in Active Directory®.

**NOTE:** Isilon servers are not listed in the drop-down list but can be entered manually.

#### Audit Path

Select one of the following options to define auditing for a file, folder or volume:

- **File** - select this option to audit a single file. Then enter a file name and path (<ShareName>\<Path>\<FileName>) or click the browse button to locate and select the file to be audited.
- **Folder** - select this option to audit a folder or a set of files. Then enter a folder name and path (<ShareName>\<FolderName>) or click the browse button to locate and select the folder to be audited.

**NOTE: Isilon file server auditing:** When specifying file and folder paths to be audited, start with the file system root (ifs/) and the file system path. Do not use SMB/CIFS share names in a file or folder path.

- **Volume** - select this option to audit a single volume. Then enter the volume name (<VolumeName>) or click the browse button to locate and select the volume to be audited.

**NOTE:** Volume names are case sensitive and must be entered correctly in the **Audit Path** field.

- **All Volumes** - select this option to audit all volumes. The Audit Path text box will contain an asterisk which cannot be changed.

**NOTE: Isilon file server auditing:** Volume auditing is not supported and should not be used.

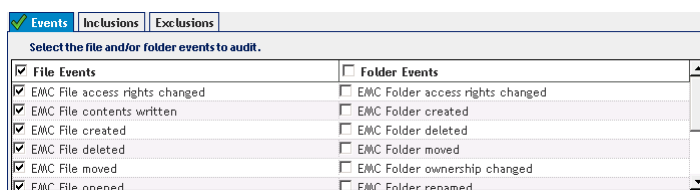

Once you have entered the audit path to be audited, use the **Add** button to add it to the selection list.

**Table 2. EMC Auditing wizard**

	<p>Click the browse button to locate and select the file, folder or volume to be audited. If you select an invalid file, folder or volume a red flashing icon appears explaining that your selection is invalid.</p> <p><b>NOTE:</b> This button is not available when <b>All Volumes</b> is selected as the audit path.</p>
Add	<p>Use the <b>Add</b> button to move the entry in the Audit Path text box to the selection list.</p> <p><b>NOTE:</b> Even though you cannot edit the Audit Path when the <b>All Volumes</b> option is selected, you must still click the <b>Add</b> button to move it to the selection list.</p>
Remove	<p>Select an entry in the selection list and click the <b>Remove</b> button to remove it from the list.</p>
Selection list	<p>The list box, located across the middle of this page, displays the files, folders or volumes selected for auditing.</p> <p>When a <b>Folder</b> is selected, you can use the drop-down menu in the <b>Scope</b> field to change the scope of coverage for the folder.</p> <ul style="list-style-type: none"> <li>• <b>This object only</b> - select this option to audit only the selected folder, not its files or subfolders.</li> <li>• <b>This object and child objects only</b> - select this option to audit the selected folder and its direct files and subfolders. This is not recursive.</li> <li>• <b>This object and all child objects</b> - select this option to audit this folder and all of its files and subfolders. (Default)</li> </ul> <p>Select an entry in this list to enable the corresponding Events, Inclusions and Exclusions tabs at the bottom of the page.</p>

## Events tab

Use the Events tab to select vital file and/or folder events.

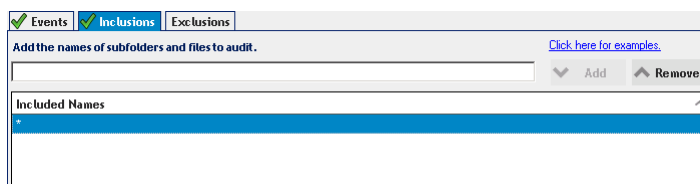

**NOTE:** The process for capturing ACL events is extremely slow. See [Performance Considerations](#) for more details on the process used to capture ACL events.

<b>File Events</b>	Select the file events to audit. Select the <b>File Events</b> check box to select all of the file events listed or select individual events from the list.
<b>Folder Events</b>	Select the folder events to audit. Select the <b>Folder Events</b> check box to select all of the folder events listed or select individual events from the list.

## Inclusions tab

When the **Folder**, **Volume** or **All Volumes** option is selected in the **Audit Path** field and the **Scope** includes child objects, the Inclusions tab will be displayed allowing you to specify what in the selected audit path is to be audited.

**NOTE:** Do NOT use the Inclusion tab to add additional subfolder paths onto the monitored base path (audit path specified above). It is meant to specify an inclusion mask for **ONLY** objects located under the monitored base path.

**Table 2. EMC Auditing wizard**

Add the names of subfolders and files to audit	<p>Enter a file mask to specify what in the audit path is to be audited. The file mask can contain any combination of the following:</p> <ul style="list-style-type: none"> <li>• Fixed characters such as letters, numbers and other characters that are allowed in file names.</li> <li>• Asterisk (*) wildcard character to substitute zero or more characters.</li> <li>• Question mark (?) wildcard character to substitute a single character.</li> </ul> <p>For example, entering * will include all folders and files in the selected audit path. See <a href="#">File/Folder Inclusion and Exclusion Examples</a> for more file mask examples.</p> <p>You can also enter the name of an individual subfolder or file that is to be included. However, if you enter the name of a subfolder, you will only receive events for operations performed against the specified subfolder. You will NOT receive events for operations performed against any child objects under the specified subfolder.</p> <p>Once you have specified the subfolders or files to be included, click the <b>Add</b> button to add it to the Inclusions list.</p>
Inclusions list	The list across the bottom of this page contains the subfolders and files selected for auditing. Use the buttons to the right of the text box to add and remove entries.
Add	Use the <b>Add</b> button to move the entry in the text box to the Inclusions list.
Remove	Select an entry in the Inclusions list and click the <b>Remove</b> button to remove it.

#### Exclusions Tab (Optional)

When the **Folder**, **Volume** or **All Volumes** option is selected in the **Audit Path** field and the **Scope** includes child objects, the Exclusions tab will be displayed allowing you to refine the settings defined on the Inclusions tab. That is, you can optionally specify the names and paths of any subfolders and files in the selected audit path that are to be excluded from auditing.

The screenshot shows the 'Exclusions' tab of the EMC Auditing wizard. It features a text input field for specifying names and paths to exclude, accompanied by an 'Add' button and a 'Remove' button. Below this is a table with two columns: 'Type' and 'Excluded Names and Paths'.

**NOTE:** Change Auditor uses event consolidation rules for Microsoft® Office file types to reduce the number of events generated. Excluding .tmp files will remove the ability to consolidate these events and you may lose some events.

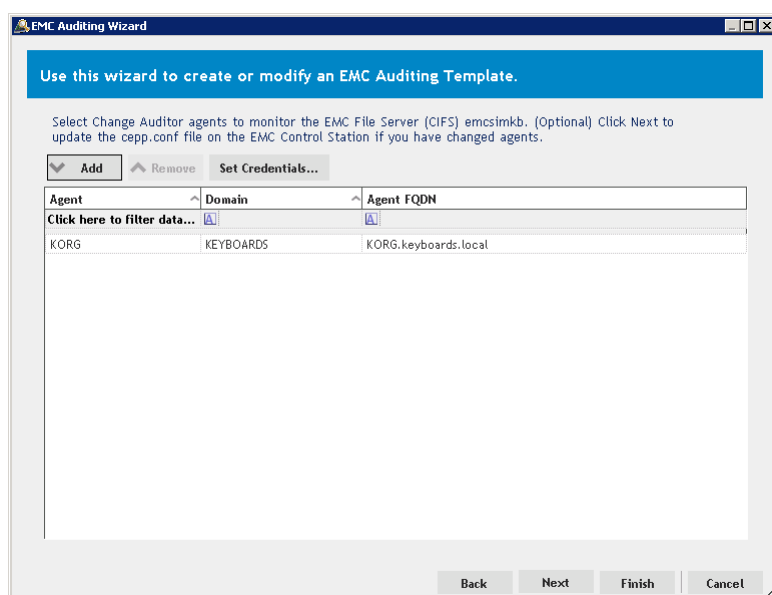

**Table 2. EMC Auditing wizard**

Add the names and paths of subfolders and files to exclude from auditing	<p>Enter a file mask to specify the name and path of subfolders and files to be excluded from auditing. The file mask can contain any combination of the following:</p> <ul style="list-style-type: none"> <li>• Fixed characters such as letters, numbers and other characters that are allowed in file names.</li> <li>• Asterisk (*) wildcard character to substitute zero or more characters. Use a single asterisk (*) to specify a non-recursive match (i.e., find match in the folder only; does not match any slash characters (\)). Use a double asterisk (**) to specify a recursive match (i.e., find match in the folder and all subfolders in audit path; matches slash characters (\) and directory names in paths).</li> <li>• Question mark (?) wildcard character to substitute a single character. The ? wildcard character does not match slash (\) characters.</li> </ul> <p>For example, entering *.log will exclude all files in the audit folder with the .log file extension. Whereas, entering **.log will exclude all files with the .log file extension found in the audit folder or in any subfolders.</p> <p>See <a href="#">File/Folder Inclusion and Exclusion Examples</a> for more examples.</p> <p>You can also enter the name of an individual subfolder or file that is to be excluded from auditing.</p> <p><b>IMPORTANT:</b> If you enter the name of a subfolder or file that is outside of the audited path, Change Auditor will NOT exclude it from auditing.</p> <p>Once you have selected a subfolder or file to be excluded, select the appropriate <b>Add</b> button to add it to the Exclusions list.</p>
Exclusions list	The list across the bottom of this page contains the folders, files and masks that are to be excluded from auditing. Use the buttons to the right of the text box to add and remove entries.
Add	<p>Use one of the following <b>Add</b> commands to move the entry in the text box to the Exclusions list:</p> <ul style="list-style-type: none"> <li>• <b>Add   Folder</b> - use this option to exclude activity against files/subfolders in any folders that match the exclusion string.</li> <li>• <b>Add   File</b> - use this option to exclude activity against any files that match the exclusion string.</li> </ul>
Remove	Select an entry in the Exclusions list and click the <b>Remove</b> button to remove it.

**Table 2. EMC Auditing wizard**

### Select Change Auditor agents page

Use this page to select the Change Auditor agents that are to receive the events captured on the selected EMC file server (CIFS).

**NOTE:** You may improve performance by assigning an EMC Auditing template to more than one Change Auditor Agent. When multiple agents are assigned to the same EMC Auditing template, events will be load balanced between these agents. However, the downside is that the 'where' field for EMC events may contain any one of the agents being monitored by this single auditing template. In addition, if EMC event logging is enabled in Change Auditor, events will be written on multiple agent servers.

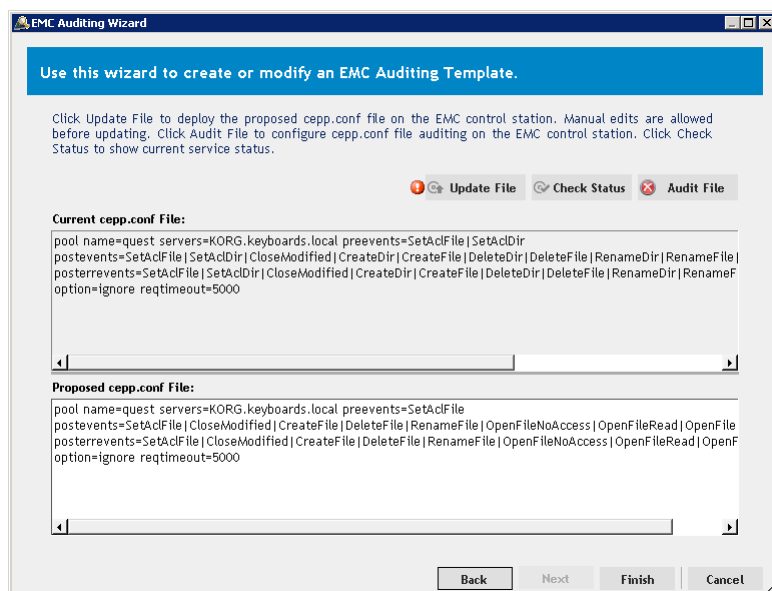

Add	<p>Click the <b>Add</b> button to assign one or more Change Auditor agents to the EMC Auditing template.</p> <p>Selecting this button displays the Eligible Change Auditor Agents dialog. From this dialog, select one or more agents and then click <b>OK</b>.</p>
Remove	<p>Click the <b>Remove</b> button to remove the selected agent from the list.</p>
Set Credentials	<p>Click the <b>Set Credentials</b> button to enter the credentials to be used to access the selected EMC Control Station:</p> <ul style="list-style-type: none"> <li>• <b>Control Station</b> - enter the IP address of the EMC Control Station.</li> <li>• <b>User</b> - enter the user name of an account with Administrative rights (rights to create or modify the cepp.conf file) on the selected EMC Control Station.</li> <li>• <b>Password</b> - enter the password associated with the user name entered above.</li> <li>• <b>Data Mover</b> - select the data mover that hosts the EMC file server (CIFS) specified on the first page of the wizard.</li> </ul> <p>Click the <b>Test</b> button to validate the credentials entered. Once the credentials are validated, click <b>OK</b> to set the credentials as entered and close the dialog.</p> <p><b>NOTE:</b> There is no need to enter the EMC Control Station credentials when configuring auditing on an Isilon® server.</p>
Change Auditor Agent list	<p>The list across the bottom of the page lists the Change Auditor agents selected to capture events from the selected EMC file server (CIFS).</p>

**Table 2. EMC Auditing wizard**

### CEPP.CONF file page

If you have changed or added agents to your template, use this page to review the changes you are proposing to make to the cepp.conf file. This page displays the current and proposed cepp.conf files. In addition to viewing the current and proposed cepp.conf files, you can optionally make changes to the proposed cepp.conf file or deploy the proposed cepp.conf file on the selected EMC Control Station.

**NOTE: Isilon file server auditing:** This information is not required; click **Finish** to create the EMC Auditing template.

Update File	Click the <b>Update File</b> button to deploy the proposed configuration file on the EMC Control Station.
Check Status	Click the <b>Check Status</b> button to run the following command to check the status of the cepp service: <pre>server_cepp &lt;Data Mover Name&gt; -pool -info</pre> <p><b>NOTE:</b> The information provided in the status check window can be used for troubleshooting. For example, a red Connection Disconnected entry could indicate one of the following scenarios:</p> <ul style="list-style-type: none"> <li>• CAVA service is not connected</li> <li>• Change Auditor agent is offline</li> <li>• Dell Shared EMC Connector service is not running</li> </ul>
Audit File	Click the <b>Audit File</b> button to enable or disable the auditing of the cepp.conf file for changes made by other third-party applications. <p><b>NOTE:</b> When this configuration file is being audited, an event is generated whenever another application modifies the configuration file. Modifications made to this configuration file by another application may prevent Change Auditor from capturing EMC events.</p> <p>Clicking this button displays the Configure cepp.conf Auditing dialog. To enable the auditing of this file, select the <b>Enable Auditing</b> check box and select a Change Auditor agent that is to poll for changes. Click <b>OK</b> to save your selections and close the dialog.</p>
Current cepp.conf File	Displays the contents of the current cepp.conf file on the selected EMC Control Station.
Proposed cepp.conf File	Displays the proposed content of the cepp.conf file based on the selections made in the EMC Auditing wizard. <p><b>NOTE:</b> You can manually edit the contents of the proposed cepp.conf file from this page.</p>

# File System events settings

From the Agent Configuration page on the Administration Tasks tab you can view and/or modify the File System settings for handling duplicate events.

Use the File System tab at the top of the Configuration Setup dialog to define how to process duplicate file system events.

## Discard duplicates that occur within *nn* seconds

This option is selected by default and will discard file system events that occur within 10 seconds of each other. You can enter a value between 1 and 600 (or use the arrow controls) to increase or decrease this interval.

## Audit all configured, including duplicates (Not Recommended)

Select this option to audit all configured file system events including duplicate events. This is NOT recommended and therefore is disabled by default.

### To set the File System events settings:

- 1 Open the Administration Tasks tab.
- 2 Click the **Configuration** task button at the bottom of the navigation pane.
- 3 Select **Agent** in the Configuration task list to display the Agent Configuration page.
- 4 Click the **Configurations** tool bar button.
- 5 On the Configuration Setup dialog, select an agent configuration from the left pane (i.e., the configuration that is being used by the Change Auditor agents assigned to receive EMC® events).
- 6 Open the File System tab and modify the settings to define how to process duplicate file system events as defined above.
- 7 Once you have set these settings, click **OK** to save your selections, close the dialog and return to the Agent Configuration page.
- 8 On the Agent Configuration page, select the Change Auditor agent(s) assigned to the EMC Auditing template (**Auditing** appears in the **EMC** column) and click the **Refresh Configuration** tool bar button or right-click command.

 **NOTE:** If you do not refresh the agent's configuration, the agent will automatically check for a new agent configuration based on the polling interval setting (located on the System Settings tab of the Configuration Setup dialog). The default is every 15 minutes.

# EMC event logging

In addition to real-time event auditing, you can enable event logging to capture EMC® events locally in a Windows® event log. This event log can then be collected using Dell™ InTrust™ to satisfy long-term storage requirements.

For EMC events, event logging is disabled by default. When enabled, only configured activities are sent to the ChangeAuditor for EMC event log. See the *Dell™ Change Auditor for EMC® Event Reference Guide* for a list of the EMC events that can be sent to the event log.

### To enable EMC event logging:

- 1 Open the Administration Tasks tab.
- 2 Click the **Configuration** task button at the bottom of the navigation pane.
- 3 Select **Agent** in the Configuration task list to display the Agent Configuration page.

- 4 Click the **Event Logging** tool bar button.
- 5 On the Event Logging dialog, select **EMC**.
- 6 Click **OK** to save your selection and close the dialog.

The EMC events configured in the EMC Auditing template will then be sent to the ChangeAuditor for EMC event log.

# EMC Searches/Reports

- [Introduction](#)
- [Create custom EMC searches](#)

## Introduction

Change Auditor for EMC enables you to create custom search definitions to search for file and/or folder changes to a specific EMC® file, folder or volume. You will use the Search Properties tabs across the bottom of the Searches page to define new custom searches.

This chapter explains how to create custom EMC searches. For a description of the dialogs mentioned in this chapter, please refer to the online help. For a description of the Search Properties tabs and how to use these tabs to customize your searches, see the *Dell™ Change Auditor User Guide*.

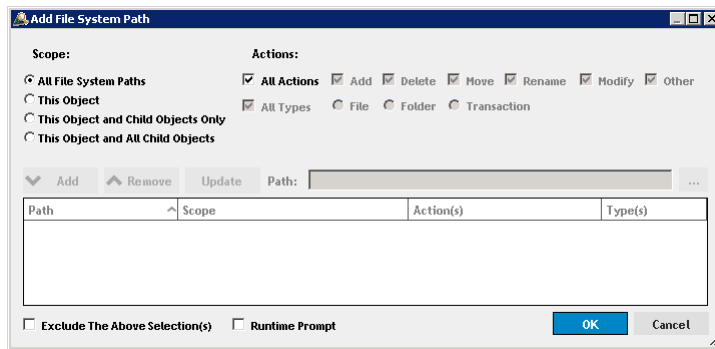

## Create custom EMC searches

The following scenarios explain how to use the What tab to create custom EMC® searches.

- ① **NOTE:** If you wanted to, you can use the other search properties tabs to define additional criteria:
- **Who** - allows you to search for events generated by a specific user, computer or group
  - **Where** - allows you to search for events captured by a specific agent or within a specific domain or site
  - **When** - allows you to search for events that occurred within a specific date/time range
  - **Origin** - allows you to search for events that originated from a specific workstation or server

### *To search for all file system events including EMC events:*

- 1 Open the Searches page.
- 2 In the explorer view (left pane), expand and select the folder where you want to save your search.  
Selecting the **Private** folder will create a search that only you can run and view, whereas selecting the **Shared** folder will create a search which can be run and viewed by all Change Auditor users.
- 3 Click the **New** tool bar button at the top of the Searches page (or right-click a folder and select the **New | New Search** menu command).  
This will activate the Search Properties tabs across the bottom of the Searches page.
- 4 On the Info tab, enter a name and description for the search.
- 1
- 2 Open the What tab, expand the **Add** tool bar button and select **Subsystem | File System**.

- 3 On the Add File System Path dialog, select the **All File System Paths** option.
- 4 Review the Actions section and select those that are to be included in the search.  
By default, **All Actions** is selected meaning that all of the actions associated with the file system path will be included in the search.
- 5 Click the **OK** button to save your selection and close the dialog.
- 6 Once you have defined your search criteria, click **Run** to save and run the search.
- 7 When this search is run, Change Auditor will search for all file system events including EMC events and display the results in a new search results page.

***To search for events performed against a specific EMC file or folder:***

- 1 Open the Searches page.
- 2 In the explorer view (left pane), expand and select the folder where you want to save your search.  
Selecting the **Private** folder will create a search that only you can run and view, whereas selecting the **Shared** folder will create a search which can be run and viewed by all Change Auditor users.
- 3 Click the **New** tool bar button at the top of the Searches page (or right-click a folder and select the **New | New Search** menu command).  
This will activate the Search Properties tabs across the bottom of the Searches page.
- 4 On the Info tab, enter a name and description for the search.
- 1
- 2 Open the What tab, expand the **Add** tool bar button and select **Subsystem | File System**.
- 3 On the Add File System Path dialog, select one of the following scope options:
  - **This Object** - select to search only the selected object.
  - **This Object and Child Objects Only** - select to search the selected object and its direct child objects.
  - **This Object and All Child Objects** - select to include the selected object and all subordinate objects (in all levels)
- 4 In the **Path** field, enter or use the browse button to select the EMC path to be searched.  
To search for events against a specific volume, enter the path as follows: \\<CIFSName>\<ShareName>\  
To search for events against a specific folder, enter the path as follows:  
\\<CIFSName>\<ShareName>\<FolderName>\

To search for events against a specific file, enter the path as follows:

\\<CIFSName>\<ShareName>\<FolderName>\<FileName>

**NOTE:** If the scope of your search is **This Object**, you can use the \* wildcard character to specify the EMC path. That is, use an asterisk (\*) to substitute zero or more characters.

When using the **This Object** option, be sure to select the appropriate **Type** option to define the type of path to be searched: **Files** or **Folders**.

- 5 Review the Actions section and select those that are to be included in the search.

By default, **All Actions** is selected meaning that all of the actions associated with the path will be included in the search.

When the scope includes child objects, **All Types** are selected by default meaning that all types of paths will be searched. If you selected the **This Object** scope option, **Files** is selected by default, which can be changed to **Folders**. Only one type can be selected.

**NOTE:** The Transaction option does not apply to EMC events.

- 6 Click the **OK** button to save your selection and close the dialog.
- 7 Click **Run** to save and run the search. Click **Save** to save the search definition without running it.
- 8 When this search is run, Change Auditor will search for EMC events in the selected path and display the results in a new search results page.

#### ***To search for a specific EMC event class:***

- 1 Open the Searches page.
- 2 In the explorer view (left pane), expand and select the folder where you want to save your search.  
Selecting the **Private** folder will create a search that only you can run and view, whereas selecting the **Shared** folder will create a search which can be run and viewed by all Change Auditor users.
- 3 Click the **New** tool bar button at the top of the Searches page (or right-click a folder and select the **New | New Search** menu command).  
This will activate the Search Properties tabs across the bottom of the Searches page.
- 4 On the Info tab, enter a name and description for the search.
- 1
- 2 Open the What tab, click the **Add** tool bar button (or expand the **Add** tool bar button and select **Event Class**).
- 3 On the Add Facilities or Event Classes dialog, enter **EMC** in the filter field under the Facility heading to display all of the EMC events.
- 4 From this list, select one or more events and use the **Add | Add This Event** option to add the selected events to the list box at the bottom of the dialog. Click **OK** to save your selection and close the dialog.
- 5 Click **Run** to save and run the search. Click **Save** to save the search definition without running it.
- 6 When this search is run, Change Auditor will search for the EMC events based on the search criteria specified on the What tab and display the results in a new search results page.

# Performance Considerations

This appendix contains strategies to help minimize performance issues.

- [Change Auditor agent performance](#)
- [Configuring audit scope](#)

## Change Auditor agent performance

Performance is directly linked to the CPU speed and network latency of the server hosting the Change Auditor agent collecting the EMC® events.

- [Hardware considerations](#)
- [Load balancing](#)

## Hardware considerations

To improve agent performance, you can:

- Upgrade the link between the EMC® file server and the Change Auditor agent to decrease network latency.
- Add extra CPUs to the current agent or select a more powerful agent host with more CPUs or CPU cores available.

See [System overview](#) for more information.

## Load balancing

You can also improve performance by assigning an EMC® Auditing template to more than one Change Auditor agent. When multiple agents are assigned to the same EMC Auditing template, events will be load balanced and events will be sent to each agent round-robin style.

- ❗ **TIP:** It is recommended that you specify no more than two agents; however, you can specify more than two agents if you find the need. The downside to assigning multiple agents to the same EMC Auditing template is that the 'where' field for EMC events may contain any one of these agents. In addition, if EMC event logging is enabled in Change Auditor, events will be written on multiple agent servers.

# Configuring audit scope

Audit only volumes, extensions and operations that are vital for your environment.

- ① **NOTE:** Configuring the auditing scope to audit only critical files/folders is recommended because this filtering controls the traffic between the Change Auditor coordinator and agent. However, changes to the auditing scope as described below will have no impact on the traffic between EMC® and the Change Auditor agent(s).

Use the EMC Auditing template to specify the auditing scope for EMC events. For example, using the EMC Auditing template you can:

- Decrease the number of volumes being audited
    - Set the Audit Path to File, Folder or Volume and enter the file, folder or volume to be audited.
      - To specify a file, enter: <ShareName>\<FolderName>\<FileName.ext>
      - To specify a folder, enter: <ShareName>\<FolderName>
      - To specify a volume, enter: <VolumeName>
  - Decrease the number of file extensions being audited
    - Use the Inclusions tab to specify individual subfolders or files to be included for auditing.
    - Use the Exclusions tab to exclude individual subfolders or files from auditing.
- ① **NOTE:** On both the Inclusions and Exclusions tabs, you can specify a group of files or subfolders using wildcard characters. That is, use an asterisk (\*) to substitute zero or more characters or use a question mark (?) to substitute a single character.
- See [File/Folder Inclusion and Exclusion Examples](#) for more information and examples.
- Decrease the number of operations being audited
    - Use the Events tab to select only vital file and/or folder events.

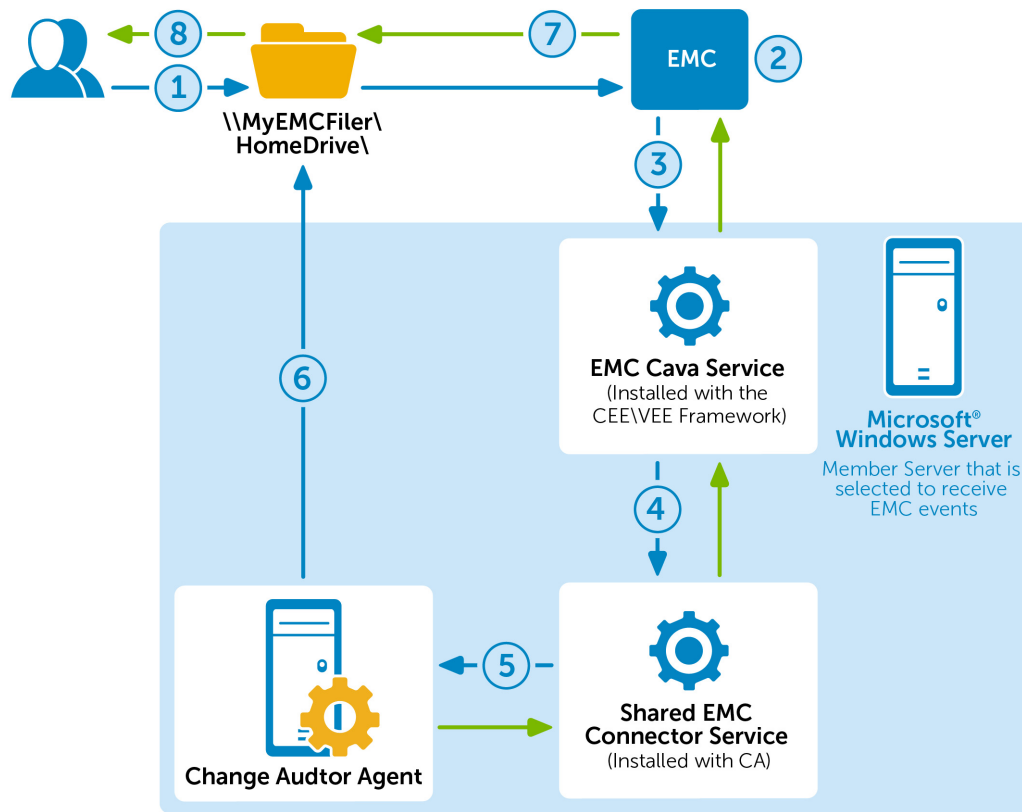

The process for capturing ACL change events is extremely slow. For better performance, do not monitor the following events if they are not vital to your environment:

- EMC File Ownership Changed
- EMC File Access Rights Changed
- EMC Folder Ownership Changed
- EMC Folder Access Rights Changed

The following diagram illustrates the process used to capture these types of events.

**NOTE:** Isilon file server auditing: This process does NOT apply.

- 1 A user opens the Properties of a folder and grants another user permissions, then clicks OK.
- 2 The EMC device HOLDS the change until the event consumers can be notified.
- 3 EMC sends the event to the CAVA service and waits for an acknowledgment.
- 4 The CAVA service sends the event to the Shared EMC Connector service and waits for an acknowledgment.
 

**NOTE:** The Dell Shared EMC Connector service (QCeeService) enables auditing of EMC devices by multiple Dell software products. This service is required because EMC supports only one auditing pool at a time.
- 5 The Shared EMC Connector service sends the event to the Change Auditor agent.
- 6 Change Auditor queries the folder that is being changed to collect the 'Before' value.
- 7 After all acknowledgments are received, the EMC device writes the permission change to disk.
- 8 The user receives a notification that the change succeeded.

## EMC Events

The following events can be selected for auditing from the Events tab on the EMC Auditing wizard. The events listed on the Events tab is based on the file/folder specified in the **Audit Path** and the coverage specified in the **Scope** cell.

### File events

- EMC File access rights changed
- EMC File contents written
- EMC File created
- EMC File deleted
- EMC File moved
- EMC File opened (Only available when the Audit Path is File)
- EMC File ownership changed
- EMC File renamed

### Folder events

- EMC Folder access rights changed
- EMC Folder created
- EMC Folder deleted
- EMC Folder moved
- EMC Folder ownership changed
- EMC Folder renamed

# File/Folder Inclusion and Exclusion Examples

This appendix provides sample entries for the Inclusions and Exclusions tabs on the auditing wizard. It does not list every combination available, but provides a variety of examples to help you understand how to use the wildcard characters allowed on these two tabs.

The Inclusions and Exclusions tabs only appear when the **Folder**, **Volume** or **All Volumes** option is selected in the **Audit Path** field and the **Scope** includes child objects. Use these two tabs as described below:

- **Inclusions tab** - enter a file mask to specify what is to be audited.
- **Exclusions tab** - optionally enter a file mask (or path) to specify subfolders and files in the selected audit path that are to be excluded from auditing.

## Inclusions tab

You must enter a file mask on the Inclusions tab to specify what is to be audited in the selected audit path. Use the following characters to specify a file mask on the Inclusions tab:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
- An asterisk (\*) wildcard character to substitute zero or more characters.
- Question mark (?) wildcard character to substitute a single character.

**NOTE:** Slash characters (\) and double asterisks (\*\*) are not allowed in file masks; therefore, to include a specific folder (or share), use the **Audit Path** field at the top of the page to specify the folder (or share) to be audited and enter an \* on the Inclusions tab.

## Examples:

The following table provides some examples of file masks that can be used on the Inclusions tab of the auditing wizard. Note that <String> in this table may contain any of the file mask characters described above (i.e., fixed characters, \* or ?).

**Table 3. Inclusion examples**

What's to be included in audit:	Inclusion syntax/examples:
Include all files located anywhere in the audit path.	<b>Inclusion Syntax:</b> * or *.* <b>NOTE:</b> This is the most commonly used file mask.
Include all files with a specific file name regardless of its file extension.	<b>Inclusion Syntax:</b> <FileName>.* <b>Example:</b> Name.* <b>Includes:</b> Name.txt Name.docx Name.pdf

**Table 3. Inclusion examples**

What's to be included in audit:	Inclusion syntax/examples:
Include all files with a specific file extension.	<p><b>Inclusion Syntax:</b> &lt;FileNameString&gt;.&lt;Ext&gt;</p> <p><b>Example 1:</b> *.tmp</p> <p><b>Includes:</b> Files with a file extension of .tmp.</p> <p>Name.tmp Testing.tmp</p> <p><b>Example 2:</b> ???*.doc</p> <p><b>Includes:</b> Files whose name contains at least three characters with a file extension of .doc.</p> <p>MyTest.doc Testing123.doc 123.doc</p> <p><b>Example 3:</b> ???test.doc</p> <p><b>Includes:</b> Files whose name contains seven characters and ends in 'test' with a file extension of .doc.</p> <p>ABCtest.doc 123test.doc</p>
Include all files with a specific file name that has a file extension of a specific length (number of characters).	<p><b>Inclusion Syntax:</b> &lt;FileName&gt;.&lt;ExtString&gt;</p> <p><b>Example 1:</b> Name.???</p> <p><b>Includes:</b> Name.txt Name.tmp Name.pdf</p> <p><b>Example 2:</b> Name.????</p> <p><b>Includes:</b> Name.docx Name.xlsx</p>
Include all files that contain a specific string in their name and/or file extension.	<p><b>Inclusion Syntax:</b> &lt;FileNameString&gt;.&lt;ExtString&gt;</p> <p><b>Example:</b> *name.??p</p> <p><b>Includes:</b> Files whose name end with 'name' with a three character file extension that ends in the letter 'p'.</p> <p>Myname.tmp Name.bmp</p>

# Exclusions tab

If you do not want to exclude anything (folders or files) in the audit path from auditing, skip this tab. However, if you want to exclude a specific folder/file or group of folders/files, use the following characters to specify what is to be excluded:

- Fixed characters such as letters, numbers and other characters that are allowed in file names.
  - An asterisk (\*) wildcard character to substitute zero or more characters.
    - NOTE:** Use a single asterisk (\*) to specify a non-recursive match (find match in the folder only; does not match any slash characters (\)).
    - Use a double asterisk (\*\*) to specify a recursive match (find match in the folder and all subfolders in audit path; matches slash characters (\) and directory names in paths).
  - Question mark (?) wildcard character to substitute a single character (does not match any slash characters (\)).
- NOTE:** Be sure to select the appropriate **Add** option (Folder or File) when adding an exclusion or you may not get the results expected. That is, use **Add | Folder** to exclude the auditing of activity against files/subfolders in folder(s) that match the exclusion string. Use **Add | File** to exclude the auditing of activity against file(s) that match the exclusion string.

## Examples

The following tables provide some examples of file masks that can be used on the Exclusions tab of the auditing wizard. Note that *<String>* in these tables may contain any of the file mask characters described above (i.e., fixed characters, \* or ?).

**Audit Path = Folder (<ShareName>\<FolderName>)**

In the following examples the Audit Path is HOME\TEMP.

**Table 4. Exclusion examples: Audit Path = Folder**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in the specified folder in the base audit path. (Add   Folder)	<b>Exclusion Syntax:</b> <FolderName> <b>Example:</b> DOCS <b>Excludes:</b> HOME\TEMP\DOCS
Exclude activity against files/subfolders in all folders that contain a specific string in their name, which are located in the base audit path. (Add   Folder)	<b>Exclusion Syntax:</b> <FolderNameString> <b>Example 1:</b> DOC* <b>Excludes:</b> HOME\TEMP\DOCS HOME\TEMP\DOCUMENTS <b>Example 2:</b> *DOC <b>Excludes:</b> HOME\TEMP\MYDOC <b>Example 3:</b> *DOC? <b>Excludes:</b> HOME\TEMP\DOCS HOME\TEMP\MYDOCX HOME\TEMP\PUBLICDOCS

**Table 4. Exclusion examples: Audit Path = Folder**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in all folders with a specific name found anywhere in the audit path. (Add   Folder)	<b>Exclusion Syntax:</b> <code>**\&lt;FolderName&gt;</code> <b>Example:</b> <code>**\MYDOC</code> <b>Excludes:</b> HOME\TEMP\MYDOC HOME\TEMP\DOCUMENTS\MYDOC HOME\TEMP\DOCS\PRIVATE\MYDOC
Exclude activity against a specific file in the base audit path. (Add   File)	<b>Exclusion Syntax:</b> <code>&lt;FileName.ext&gt;</code> <b>Example:</b> <code>Test1.docx</code> <b>Excludes:</b> <code>HOME\TEMP\Test1.docx</code>
Exclude activity against all files with a specific extension, which are located in the base audit path. (Add   File)	<b>Exclusion Syntax:</b> <code>*.&lt;ext&gt;</code> <b>Example:</b> <code>*.tmp</code> <b>Excludes:</b> HOME\TEMP\Doc1.tmp HOME\TEMP\Testing123.tmp
Exclude activity against all files with a specific file extension, which may be found anywhere in the audit path. (Add   File)	<b>Exclusion Syntax:</b> <code>**.&lt;ext&gt;</code> <b>Example:</b> <code>**tmp</code> <b>Excludes:</b> HOME\TEMP\Doc1.tmp HOME\TEMP\DOCUMENTS\Testing.tmp
Exclude activity against all files that contain a specific string in their name and/or file extension, which are located in the base audit path. (Add   File)	<b>Exclusion Syntax:</b> <code>&lt;FileNameString&gt;.&lt;ExtString&gt;</code> <b>Example 1:</b> <code>??word.???</code> <b>Excludes:</b> Files whose name contains six characters and ends in 'word', with a three character file extension. HOME\TEMP\Myword.doc HOME\TEMP\12word.txt <b>Example 2:</b> <code>*word*.??p</code> <b>Excludes:</b> Files whose name contains the string 'word', with a three character file extension that ends with the letter 'p'. HOME\TEMP\Word.tmp HOME\TEMP\Mywordtest.tmp HOME\TEMP\Nowords.bmp

#### **Audit Path = Volume (<VolumeName>)**

In the following examples, the volume name is Vol0 (Audit Path = Vol0); share names are HOME, SHARE2, and SHAREDDOCS.

- i **NOTE:** Volume names are case sensitive and must be entered correctly in the **Audit Path** field on the auditing wizard.
- i **NOTE:** When auditing an individual volume or all volumes, you must include the share name (or a file mask to represent the share) in the exclusion path. See examples below.

**Table 5. Exclusion examples: Audit Path = Volume**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in a specific folder found in a specific location on the selected volume. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\<Path>\<FolderName> <b>Example:</b> HOME\USERS\TEMP\DOCS <b>Excludes:</b> Vol0\HOME\USERS\TEMP\DOCS
Exclude activity against files/subfolders in all folders whose name contains a specific string of characters found in a specific location on the selected volume. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\<Path>\<CharString> <b>Example:</b> HOME\USERS\TE????DOCS <b>Excludes:</b> Vol0\HOME\USERS\TESTINGDOCS Vol0\HOME\USERS\TEMPORARYDOCS
Exclude activity against files/subfolders in all folders with the specified folder name which is located on a specific share. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\**\<FolderName> <b>Example:</b> HOME\**\DOCS <b>Excludes:</b> Vol0\HOME\DOCS Vol0\HOME\DEPTS\DOCS Vol0\HOME\USERS\TEMP\DOCS
Exclude activity against files/subfolders in all folders whose name starts with a specific string of characters which are located on a specific share. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\**\<CharString>*<FolderName> <b>Example:</b> HOME\**\DOC* <b>Excludes:</b> Vol0\HOME\DOCS Vol0\HOME\DEPTS\DOCS Vol0\HOME\USERS\TEMP\DOCS Vol0\HOME\USERS\DOCUMENTS
Exclude activity against files/subfolders in all folders with the specified folder name found in a specific path level on all shares on the selected volume. (Add   Folder)	<b>Exclusion Syntax:</b> **\<FolderName> <b>Example 1:</b> **\DOCS <b>Excludes:</b> Vol0\HOME\USERS\DOCS Vol0\HOME\DEPTS\DOCS Vol0\SHARE2\TEST\DOCS <b>Example 2:</b> **\*\DOCS <b>Excludes:</b> Vol0\HOME\USERS\TEMP\DOCS Vol0\SHARE2\PUBLIC\TEST\DOCS
Exclude activity against files/subfolders in all folders with the specified folder name which may be located anywhere on the selected volume. (Add   Folder)	<b>Exclusion Syntax:</b> **\<FolderName> <b>Example:</b> **\DOCS <b>Excludes:</b> Vol0\HOME\DOCS Vol0\HOME\DEPTS\DOCS Vol0\HOME\USERS\TEMP\DOCS Vol0\SHARE2\TEST\DOCS Vol0\SHARE2\PUBLIC\TEST\DOCS

**Table 5. Exclusion examples: Audit Path = Volume**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in all shares and folders whose name contains a specific string of characters which may be located anywhere on the selected volume. (Add   Folder)	<b>Exclusion Syntax:</b> <b>**&lt;CharString&gt;*</b> <b>Example:</b> <b>**DOC*</b> <b>Excludes:</b> Vol0\HOME\DOCS Vol0\HOME\MYDOCS Vol0\HOME\USERS\TEMP\DOCS Vol0\HOME\USERS\TEMPORARYDOCS Vol0\SHARE2\TEST\DOCS Vol0\SHARE2\PUBLIC\TEST\MYDOCS Vol0\SHAREDDOC
Exclude activity against files whose name contains a specific string of characters which may be found anywhere on the selected volume. (Add   File)	<b>Exclusion Syntax:</b> <b>**&lt;CharString&gt;*</b> <b>Example:</b> <b>**DOC*</b> <b>Excludes:</b> Vol0\HOME\Document1.tmp Vol0\HOME\DOCS\Testing.doc Vol0\HOME\USERS\TEMP\DOCS\BetaDoc.pdf Vol0\SHARE2\USERS\DOCS\Test1.docx Vol0\SHARE2\PUBLIC\MYDOCS\OldDocPlan
Exclude activity against a specific file found in a specific location on the selected volume. (Add   File)	<b>Exclusion Syntax:</b> <b>&lt;ShareName&gt;\&lt;Path&gt;\&lt;FileName.Ext&gt;</b> <b>Example:</b> SHARE2\USERS\DOCS\Test1.docx <b>Excludes:</b> Vol0\SHARE2\USERS\DOCS\Test1.docx
Exclude activity against files with a specific file name (regardless of the file extension) which may be located anywhere on the selected volume. (Add   File)	<b>Exclusion Syntax:</b> <b>**\&lt;FileName&gt;.*</b> <b>Example:</b> <b>**\test1.*</b> <b>Excludes:</b> Vol0\HOME\DEPTS\DOCS\test1.docx Vol0\HOME\USERS\TEMP\DOCS\test1.docx Vol0\HOME\USERS\DOCUMENTS\test1.pdf Vol0\SHARE2\TEST\DOCS\test1.txt
Exclude activity against files with the specified file extension found in a specific location on the selected volume. (Add   File)	<b>Exclusion Syntax:</b> <b>&lt;ShareName&gt;\&lt;Path&gt;\*.&lt;Ext&gt;</b> <b>Example:</b> <b>SHARE2\TEST\DOCS\*.docx</b> <b>Excludes:</b> Vol0\SHARE2\TEST\DOCS\Test1.docx Vol0\SHARE2\TEST\DOCS\MyInfo.docx
Exclude activity against files with the specified file extension which may be located anywhere on the selected volume. (Add   File)	<b>Exclusion Syntax:</b> <b>**\*.&lt;Ext&gt;</b> <b>Example:</b> <b>**\*.pdf</b> <b>Excludes:</b> Vol0\HOME\MYDOCS\Final.pdf Vol0\HOME\DEPTS\DOCS\Test123.pdf Vol0\HOME\USERS\DOCUMENTS\Test1.pdf Vol0\SHARE2\TEST\DOCS\Current.pdf Vol0\SHARE2\PUBLIC\TEST\MYDOCS\Ex.pdf

### **Audit Path = All Volumes**

In the following examples, Vol0 contains three shares: HOME, SHARE2 and SHAREDDOCS; and Vol1 contains one share: SHAREDAPPS.

- NOTE:** When using **All Volumes**, you cannot exclude an individual volume. You must use a share name, which is unique to a volume. That is, you cannot have two shares with the name of HOME (either on the same volume or different volumes).

**NOTE:** When auditing an individual volume or all volumes, you must include the share name (or a file mask to represent the share) in the exclusion path. See examples below.

**Table 6. Exclusion examples: Audit Path = All Volumes**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in a specific folder found in a specific location on all volumes. (Add   Folder)	<b>Exclusion Syntax:</b> *\ <i>&lt;Path&gt;</i> \\ <i>&lt;FolderName&gt;</i> <b>Example:</b> *\\USERS\\TEMP\\DOCS <b>Excludes:</b> Vol0\\HOME\\USERS\\TEMP\\DOCS Vol0\\SHARED2\\USERS\\TEMP\\DOCS Vol1\\SHAREDAPPS\\USERS\\TEMP\\DOCS
Exclude activity against files/subfolders in all folders with the specified folder name found on a specific share. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\\*\\<FolderName> <b>Example:</b> HOME\\*\\DOCS <b>Excludes:</b> Vol0\\HOME\\DOCS Vol0\\HOME\\DEPTS\\DOCS Vol0\\HOME\\USERS\\TEMP\\DOCS
Exclude activity against files/subfolders in all folders whose name starts with a specific string of characters found on a specific share. (Add   Folder)	<b>Exclusion Syntax:</b> <ShareName>\\*\\<CharString>*<CharString> <b>Example:</b> HOME\\*\\DOC* <b>Excludes:</b> Vol0\\HOME\\DOCS Vol0\\HOME\\DEPTS\\DOCS Vol0\\HOME\\USERS\\TEMP\\DOCS Vol0\\HOME\\USERS\\DOCUMENTS
Exclude activity against files/subfolders in all folders with the specified folder name found anywhere on all volumes. (Add   Folder)	<b>Exclusion Syntax:</b> *\\<FolderName> <b>Example:</b> *\\DOCS <b>Excludes:</b> Vol0\\HOME\\DOCS Vol0\\HOME\\DEPTS\\DOCS Vol0\\HOME\\USERS\\TEMP\\DOCS Vol0\\SHARE2\\TEST\\DOCS Vol1\\SHAREDAPPS\\DOCS
Exclude activity against files/subfolders in all folders with the specified folder name found at a specific level on all volumes. (Add   Folder)	<b>Exclusion Syntax:</b> *\\*\\<FolderName> <b>Example 1:</b> *\\*\\DOCS <b>Excludes:</b> Vol0\\HOME\\DEPTS\\DOCS Vol0\\SHARE2\\TEST\\DOCS Vol1\\SHAREDAPPS\\INSTALL\\DOCS <b>Example 2:</b> *\\*\\*\\DOCS <b>Excludes:</b> Vol0\\HOME\\USERS\\TEMP\\DOCS Vol0\\SHARED2\\PUBLIC\\TEST\\DOCS Vol1\\SHAREDAPPS\\PROCS\\INTRO\\DOCS

**Table 6. Exclusion examples: Audit Path = All Volumes**

What's to be excluded:	Exclusion syntax/examples:
Exclude activity against files/subfolders in all shares and folders whose name ends with a specific string of characters that may be located anywhere on all volumes. (Add   Folder)	<b>Exclusion Syntax:</b> <b>**&lt;CharString&gt;</b> <b>Example:</b> <b>**DOCS</b> <b>Excludes:</b> Vol0\HOME\DOCS Vol0\HOME\MYDOCS Vol0\HOME\USERS\TEMP\DOCS Vol0\HOME\USERS\TEMPORARYDOCS Vol0\HOME\USERS\TEMP\TESTINGDOCS Vol0\SHARE2\TEST\DOCS Vol0\SHARE2\PUBLIC\TEST\DOCS Vol0\SHARED\DOCS Vol1\SHAREDAPPS\INSTALL\DOCS Vol1\SHAREDAPPS\PROCS\INTRO\DOCS
Exclude a specific file found in a specific location on the specified share. (Add   File)	<b>Exclusion Syntax:</b> <b>&lt;ShareName&gt;\&lt;Path&gt;\&lt;FileName.Ext&gt;</b> <b>Entering:</b> SHARE2\USERS\DOCS\Test1.docx <b>Excludes:</b> Vol0\SHARE2\USERS\DOCS\Test1.docx
Exclude activity against all files with the specified file extension found in a specific location on the specified share. (Add   File)	<b>Exclusion Syntax:</b> <b>&lt;ShareName&gt;\&lt;Path&gt;\*.&lt;Ext&gt;</b> <b>Entering:</b> SHARE2\TEST\DOCS\*.docx <b>Excludes:</b> Vol0\SHARE2\TEST\DOCS\Test1.docx Vol0\SHARE2\TEST\DOCS\123testing.docx
Exclude activity against all files with the specified file extension found anywhere on all volumes. (Add   File)	<b>Exclusion Syntax:</b> <b>**\*.&lt;Ext&gt;</b> <b>Example:</b> <b>**\*.pdf</b> <b>Excludes:</b> Vol0\HOME\DEPTS\DOCS\Test123.pdf Vol0\SHARE2\TEST\DOCS\Current.pdf Vol1\SHAREDAPPS\WhatsNew.pdf
Exclude a specific file (regardless of the file extension) found anywhere on the all volumes. (Add   File)	<b>Exclusion Syntax:</b> <b>**\&lt;FileName&gt;.*</b> <b>Entering:</b> <b>**\test1.*</b> <b>Excludes:</b> Vol0\HOME\DEPTS\DOCS\test1.docx Vol0\HOME\USERS\TEMP\DOCS\test1.docx Vol0\HOME\USERS\DOCUMENTS\test1.pdf Vol0\SHARE2\USERS\DOCS\test1.txt Vol1\SHAREDAPPS\test1.xlsx

## EMC Isilon Auditing

Beginning with Change Auditor for EMC 6.5, EMC Isilon file server auditing is supported; however, automatic Isilon auditing configuration is not supported. This appendix discusses the manual configuration that is required to capture events from an Isilon file server.

### Configuration Notes

- On the Change Auditor agent intended to audit the Isilon server, install CEE 6.3.1 (or higher). You may need to configure the firewall setting on your server before the CEE application can receive events from an Isilon server.
- Change Auditor does not support automatic Isilon auditing configuration. To enable Isilon file server auditing, use the Isilon management web site UI and command line interface.

See EMC OneFS Web Administration Guide (<http://bit.ly/onefs-web-administration-guide-7-1>) and EMC OneFS CLI Administration Guide (<http://bit.ly/onefs-cli-administration-guide-7-1>) for more information.

 **NOTE:** An EMC account is required to access these EMC administration guides.

- When asked for the URI for the CEE server, use the following format:  
'http://<FQDN of CA agent/CEE server>:12228/vee'
- To configure Change Auditor for EMC to audit an Isilon server, use the EMC Auditing wizard. Isilon servers are not listed in the **EMC File Server (CIFS)** drop-down, but can be manually entered:

Make sure that the server name specified is the one configured in the Isilon auditing setting:

DASHBOARD
CLUSTER MANAGEMENT
FILE SY

General Settings
Network Configuration
Hardware Configuration
Job O

## Auditing

Settings

### Edit Auditing Settings

Zone	Actions
System	Remove

Event Forwarding

CEE Server URIs (should start with http:// and include port and path to CEE server if neces  

+ Add another input field

Storage Cluster Name (This field is required only if needed by your third-party audit applica

- ‘Volume’ auditing is not supported on Isilon servers and should not be used.
- When specifying file and folder paths to be audited, the Isilon’s shared directory path should be used. You can find it in Isilon management web site UI by going to Protocols - Windows Sharing (SMB) - SMB Shares.

For example: To audit \\IsilonName\Storage\TestFolder folder, you need to specify ifs\data\TestFolder in the Audit Path field of the template in Change Auditor. Ensure that the backslash (\) is used in the path in Change Auditor template.

- Owner and permission events are supported, but events captured contain only ‘to’ values and no ‘from’ values. Make sure the Change Auditor agent service account (default is LOCALSYSTEM) has permission to open files/folders on the audited Isilon server to retrieve permission settings.
- There is no need to enter information on the Logon Credentials dialog when configuring auditing on an Isilon server.

Dell listens to customers and delivers worldwide innovative technology, business solutions and services they trust and value. For more information, visit [www.software.dell.com](http://www.software.dell.com).

## Contacting Dell

### Technical Support:

## Technical Support Resources

Technical support is available to customers who have purchased Dell software with a valid maintenance contract and to customers who have trial versions. To access the Support Portal, go to <http://software.dell.com/support/>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. In addition, the portal provides direct access to product support engineers through an online Service Request system.

The site enables you to:

- Create, update, and manage Service Requests (cases)
- View Knowledge Base articles
- Obtain product notifications
- Download software. For trial software, go to [Trial Downloads](#).
- View how-to videos
- Engage in community discussions
- Chat with a support engineer
