About this publication

Tivoli Netcool/OMNIbus is a service level management (SLM) system that delivers real-time, centralized monitoring of complex networks and IT domains.

The *IBM Tivoli Netcool/OMNIbus Error Messages Guide* is a reference guide that describes system messages in Tivoli Netcool/OMNIbus and how to respond to those messages.

Intended audience

This publication is intended for administrators who are responsible for configuring Tivoli Netcool/OMNIbus.

What this publication contains

This publication contains the following sections:

- Chapter 1, "Error messages generated by the server-side components," on page 1

  Lists and describes the error messages generated by the Tivoli Netcool/OMNIbus server-side components.
- Chapter 2, "Error messages generated by the Web GUI component," on page 393

  Lists and describes the error messages generated by the Web GUI server-side component.

Publications

This section lists publications in the Tivoli Netcool/OMNIbus library and related documents. The section also describes how to access Tivoli publications online and how to order Tivoli publications.

Your Tivoli Netcool/OMNIbus library

The following documents are available in the Tivoli Netcool/OMNIbus library:

- *IBM Tivoli Netcool/OMNIbus Installation and Deployment Guide*, SC14-7526

  Includes installation and upgrade procedures for Tivoli Netcool/OMNIbus, and describes how to configure security and component communications. The publication also includes examples of Tivoli Netcool/OMNIbus architectures and describes how to implement them.
- *IBM Tivoli Netcool/OMNIbus Administration Guide*, SC14-7527

  Describes how to perform administrative tasks using the Tivoli Netcool/OMNIbus Administrator GUI, command-line tools, and process control. The publication also contains descriptions and examples of ObjectServer SQL syntax and automations.
- *IBM Tivoli Netcool/OMNIbus Web GUI Administration and User's Guide*, SC14-7528

  Describes how to perform administrative and event visualization tasks using the Tivoli Netcool/OMNIbus Web GUI.
- *IBM Tivoli Netcool/OMNIbus User's Guide*, SC14-7529

  Provides an overview of the desktop tools and describes the operator tasks related to event management using these tools.

© Copyright IBM Corp. 2011, 2012

- *IBM Tivoli Netcool/OMNIbus Probe and Gateway Guide*, SC14-7530

  Contains introductory and reference information about probes and gateways, including probe rules file syntax and gateway commands.
- *IBM Tivoli Monitoring for Tivoli Netcool/OMNIbus Agent User's Guide*, SC14-7532

  Describes how to install the health monitoring agent for Tivoli Netcool/OMNIbus and contains reference information about the agent.
- *IBM Tivoli Netcool/OMNIbus Event Integration Facility Reference*, SC14-7533

  Describes how to develop event adapters that are tailored to your network environment and the specific needs of your enterprise. This publication also describes how to filter events at the source.
- *IBM Tivoli Netcool/OMNIbus Error Messages Guide*, SC14-7534

  Describes system messages in Tivoli Netcool/OMNIbus and how to respond to those messages.
- *IBM Tivoli Netcool/OMNIbus Web GUI Administration API (WAAPI) User's Guide*, SC22-7535

  Shows how to administer the Tivoli Netcool/OMNIbus Web GUI using the XML application programming interface named WAAPI
- *IBM Tivoli Netcool/OMNIbus ObjectServer HTTP Interface Reference Guide*, SC27-5613Describes the URIs and common behaviors of the Application Programming Interface (API) that is called the ObjectServer HTTP Interface. Describes how to enable the API and provides examples of JSON payloads, and HTTP requests and responses.
- *IBM Tivoli Netcool/OMNIbus ObjectServer OSLC Interface Reference Guide*, SC27-5613Describes the services, resources, and common behaviors of the Open Services for Lifecycle Collaboration (OSLC) Application Programming Interface (API) that is called the ObjectServer OSLC Interface. Describes how to enable the API and provides examples of service provider definitions, RDF/XML payloads, and HTTP requests and responses.

Accessing terminology online

The IBM Terminology Web site consolidates the terminology from IBM product libraries in one convenient location. You can access the Terminology Web site at the following Web address:

http://www.ibm.com/software/globalization/terminology

Accessing publications online

IBM posts publications for this and all other Tivoli products, as they become available and whenever they are updated, to the Tivoli Information Center Web site at:

http://publib.boulder.ibm.com/infocenter/tivihelp/v3r1/index.jsp

Note: If you print PDF documents on other than letter-sized paper, set the option in the **File** > **Print** window that allows Adobe Reader to print letter-sized pages on your local paper.

Ordering publications

You can order many Tivoli publications online at the following Web site:

http://www.elink.ibmlink.ibm.com/publications/servlet/pbi.wss

You can also order by telephone by calling one of these numbers:

- In the United States: 800-879-2755
- In Canada: 800-426-4968

In other countries, contact your software account representative to order Tivoli publications. To locate the telephone number of your local representative, perform the following steps:

1. Go to the following Web site:
   http://www.elink.ibmlink.ibm.com/publications/servlet/pbi.wss
2. Select your country from the list and click **Go**. The Welcome to the IBM Publications Center page is displayed for your country.
3. On the left side of the page, click **About this site** to see an information page that includes the telephone number of your local representative.

Accessibility

Accessibility features help users with a physical disability, such as restricted mobility or limited vision, to use software products successfully.

With this product, you can use assistive technologies to hear and navigate the interface. You can also use the keyboard instead of the mouse to operate some features of the graphical user interface.

Tivoli technical training

For Tivoli technical training information, refer to the following IBM Tivoli Education Web site:

http://www.ibm.com/software/tivoli/education

Support information

If you have a problem with your IBM software, you want to resolve it quickly. IBM provides the following ways for you to obtain the support you need:

Online
Go to the IBM Software Support site at http://www.ibm.com/software/support/probsub.html and follow the instructions.

IBM Support Assistant
The IBM Support Assistant (ISA) is a free local software serviceability workbench that helps you resolve questions and problems with IBM software products. The ISA provides quick access to support-related information and serviceability tools for problem determination. To install the ISA software, go to http://www.ibm.com/software/support/isa.

Documentation

If you have a suggestion for improving the content or organization of this guide, send it to the Tivoli Netcool/OMNIbus Information Development team at:

mailto://L3MMDOCS@uk.ibm.com

Conventions used in this publication

This publication uses several conventions for special terms and actions and operating system-dependent commands and paths.

Typeface conventions

This publication uses the following typeface conventions:

Bold

- Lowercase commands and mixed case commands that are otherwise difficult to distinguish from surrounding text
- Interface controls (check boxes, push buttons, radio buttons, spin buttons, fields, folders, icons, list boxes, items inside list boxes, multicolumn lists, containers, menu choices, menu names, tabs, property sheets), labels (such as **Tip:** and **Operating system considerations:**)
- Keywords and parameters in text

Italic

- Citations (examples: titles of publications, diskettes, and CDs)
- Words defined in text (example: a nonswitched line is called a *point-to-point* line)
- Emphasis of words and letters (words as words example: "Use the word *that* to introduce a restrictive clause."; letters as letters example: "The LUN address must start with the letter *L*.")
- New terms in text (except in a definition list): a *view* is a frame in a workspace that contains data
- Variables and values you must provide: ... where *myname* represents....

Monospace

- Examples and code examples
- File names, programming keywords, and other elements that are difficult to distinguish from surrounding text
- Message text and prompts addressed to the user
- Text that the user must type
- Values for arguments or command options

Operating system-dependent variables and paths

This publication uses the UNIX convention for specifying environment variables and for directory notation.

When using the Windows command line, replace **$***variable* with **%***variable***%** for environment variables, and replace each forward slash (**/**) with a backslash (\) in directory paths. For example, on UNIX systems, the $NCHOME environment variable specifies the path of the Netcool® home directory. On Windows systems, the %NCHOME% environment variable specifies the path of the Netcool home directory. The names of environment variables are not always the same in the

Windows and UNIX environments. For example, %TEMP% in Windows environments is equivalent to $TMPDIR in UNIX environments.

If you are using the bash shell on a Windows system, you can use the UNIX conventions.

Operating system-specific directory names

Where Tivoli Netcool/OMNIbus files are identified as located within an *arch* directory under NCHOME, *arch* is a variable that represents your operating system directory, as shown in the following table.

Table 1. Directory names for the arch variable

Directory name represented by *arch*	**Operating system**
`aix5`	AIX® systems
`hpux11hpia`	HP-UX Itanium-based systems
`linux2x86`	Red Hat Linux and SUSE systems
`linux2s390`	Linux for System z®
`solaris2`	Solaris systems
`win32`	Windows systems

Fix pack information

Information that is applicable only to the fix pack versions of Tivoli Netcool/OMNIbus are prefaced with a graphic. For example, if a set of instructions is preceded by the graphic Fix Pack 1 , it means that the instructions can only be performed if you installed fix pack 1 of your installed version of Tivoli Netcool/OMNIbus. In the release notes, descriptions of known problems that are prefaced with Fix Pack 1 are solved in fix pack 1, and so on.

Note: Fix packs are distributed separately for the server components and the Web GUI component.

Chapter 1. Error messages generated by the server-side components

The following error messages are generated by the server-side components of Tivoli Netcool/OMNIbus.

ALD

Messages related to LDAP authentication.

E-ALD-102-001 The system has been configured for FIPS but the LDAP authentication module is not configured to use SSL

Administrator response: Not applicable.

E-AUT-001-014 Failed to recover trigger group

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-001-015 Failed to recover trigger

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-001-017 Trigger is already member of trigger group

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-001-018 Trigger has circular dependencies

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-002-006 Trigger \%0s\: action execution failed: *%1s*

Explanation: The following examples show how this message is written to the log.

Example 1:

```
E-AUT-002-006: Trigger "deleteitm":
 action execution failed:
 Attempt to insert duplicate row
```

Example 2:

```
E-AUT-002-006:
 Trigger "connection_watch_disconnect":
 action execution failed:
 Not enough space
```

Example 3:

```
E-AUT-002-006: Trigger "log_all_event":
action execution failed:
There is not enough memory available now.
The external procedure (log_event) was not
executed.
```

The example messages indicate that ObjectServer triggers are not being executed, possibly because there is not enough memory to process the operation.

System action: Not applicable.

User response: Not applicable.

Administrator response: In example message 1, a deduplication trigger does not exist for the table where the event is being inserted. In this case, you can add a deduplication trigger to handle duplicate rows in the table concerned.

The following example trigger drops the incoming duplicate event data and does not make any updates:

```
create or replace trigger custom_dedup
 group default_triggers
 debug false
 enabled true
 priority 1
comment 'Deduplication processing for
 custom.status'
 before reinsert on custom.status
 for each row
 begin

 cancel;

end;
```

In example messages 2 and 3, there is a problem with the amount of memory available. Monitor the memory usage of the ObjectServer and the host system over an extended time period to determine whether the system requires more physical memory.

For information about triggers and automations, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-AUT-002-009 Trigger \%0s\: action execution failed: *%1s*: *%2s*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-003-001 Trigger \%0s\: *%1s* **on line** *%2d* **near** *%3s*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-003-002 Trigger \%0s\: *%1s* **on line** *%2d*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-AUT-003-004 Trigger \%0s\: recursive raise detected. Aborting execution

Explanation: The following example shows how this message is written to the log:

```
2012-04-13T21:12:28: Error: E-AUT-003-004:
 Trigger "test_correlation": recursive raise
 detected. Aborting execution
```

This error indicates that the affected trigger is performing an action that might lead to the trigger being executed recursively, thereby degrading ObjectServer performance. When the ObjectServer detects that it is recursively invoking a trigger, it prevents execution of the trigger and returns this error message.

In the example message, a custom database trigger, `test_correlation`, fires on an update to the

alerts.status table. However, the trigger itself performs an update to alerts.status, thus starting a recursive loop.

System action: Not applicable.

User response: Not applicable.

Administrator response: The response to this error will depend on your system configuration. The solution to the problem in the example is to either alter the trigger to prevent recursion, or to use a temporal trigger instead of a database trigger.

E-AUT-003-005 *%0s* **at or near** *%1s* **on line** *%2d* **of** *%3s*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-ETC-102-036 Fail to parse date string: *%0s* **using format:** *%1s***. Error code:** *%2s*

Explanation: The following example shows how this message is written to the log:

```
Error: E-ETC-102-036: Fail to parse date string:
 Tue DEC 19 18:33:11 JST 2010
 using format: %a %b %e %T %Y.
 Error code: U_PARSE_ERROR
```

This error messages indicates that a probe failed to parse a date string.

The example error message was written to a probe log file. In this example, the error occurs because the date and time pattern `%a %b %e %T %Y` does not match the date string, which includes time zone information (JST).

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example error message, add the time zone information to the pattern. For example, use the pattern `%a %b %e %T %Z %Y` to define the time string `Tue DEC 19 18:33:11 JST 2010`.

However, because JST is not a standard time zone identifier supported by ICU, the time string `Tue DEC 19 18:33:11 JST 2010` still causes a parse error. The solution is to use an unambiguous time zone identifier equal to JST, for example, `Tue DEC 19 18:33:11 GMT+9 2010`.

This error does not occur in versions of Tivoli Netcool/OMNIbus earlier than V7.3 because those versions ignore time zone information. In Tivoli Netcool/OMNIbus V7.3, POSIX date and time patterns were deprecated in favor of Locale Data Markup Language (LDML) date and time patterns that are provided by International Components for Unicode (ICU) libraries. Whenever possible, replace POSIX patterns in probe rules files with LDML patterns.

For more information about the change from POSIX to LDML date and time formats, see the *IBM Tivoli Netcool/OMNIbus Installation and Deployment Guide*.

For more information about using date and time functions in rules files, see the *IBM Tivoli Netcool/OMNIbus Probe and Gateway Guide*.

W-ETC-004-060 Undefined argument: *%0s*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

W-ETC-004-066 Failed to load properties file *%0s***:** *%1s*

Explanation: The following examples show how this message is written to the log:

```
W-ETC-004-066: Failed to load properties file
 /opt/netcool/omnibus/etc/NCOMS.props:
 No such file or directory
```

```
W-ETC-004-066: Failed to load properties file
 /nco731/tivoli/netcool/omnibus/etc/NCOMS.props:
 A file or directory in the path name
 does not exist.
```

The example messages indicate that the ObjectServer properties file does not exist, or that part of the path name is incorrect.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example message, ensure that the ObjectServer properties file exists. The default location is `$NCHOME/omnibus/etc`.

You can use the ObjectServer `-propsfile` option to set the properties file:

```
nco_objserv -propsfile $NCHOME/omnibus/etc
/NCOMS.props
```

This error can occur when you attempt to start an ObjectServer without having first run the database initialization utility (**`nco_dbinit`**) to create the database files and the default properties file.

For information about creating and running ObjectServers, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-GOB-102-057 [ngobjserv]: Failed to send the command to the ObjectServer. (*%0d*:*%1s*)

Explanation: The following example shows how this message is written to the log:

```
Error: E-GOB-102-057: [ngobjserv]:
 Failed to send the command to the ObjectServer.
 (-19: General failure)
```

The example error message was written to a bidirectional ObjectServer gateway log file and indicates that the gateway cannot send a command to the ObjectServer.

System action: Not applicable.

User response: Not applicable.

Administrator response: This error can be caused by many different conditions. Verify that the ObjectServer is running correctly and that it is managing the current load.

To monitor ObjectServer performance, ensure that the ObjectServer **Profile** property is enabled, and review the profile and trigger statistics logs in the `$NCHOME/omnibus/logs/`*`ObjectServer_name`*`_profiler_report.log1` and `$NCHOME/omnibus/logs/`*`ObjectServer_name`*`_trigger_stats.log1` files.

Ensure that the total time from client requests and automations in both the profile and trigger statistics logs is less than the ObjectServer **Granularity** property setting (the default is 60 seconds).

If the total time is regularly longer than the **Granularity** property setting, ObjectServer performance might degrade. Troubleshoot the clients and triggers that are identified in the log files as consuming the most IDUC cycles. The client time might be longer than the granularity period because of ObjectServer multithreading.

For information about monitoring ObjectServer performance, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-IVM-005-001 OpenServer - Error: *%0d***:***%1s*

Explanation: The following example shows how this message is written to the log:

```
E-IVM-005-001: OpenServer - Error: 16133/10/0:
 Configuration of 100 connections has been
 exceeded, connection rejected
```

The example message indicates that a connections threshold has been exceeded. The `E-IVM-005-001` message can indicate any one of several different errors, and is not limited to connection problems.

System action: Not applicable.

User response: Not applicable.

Administrator response: OpenServer errors can have many causes. Examine the message text and the accompanying messages in the log for more information.

E-IVM-005-002 OpenServer - Error: *%0d*:*%1s*

Explanation: The following examples show how this message is written to the log.

Example 1:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine sybnet_listen() failed in
 srv__start_net
 Network error: status = 22 - Protocol driver call
 to determine properties failed
 Error -1:SSL: Unable to open keyfile. Either the
 file is missing, or the file permissions do not
 grant access, or the file format is incorrect.
```

Example 2:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine sybnet_listen() failed in
 srv__start_net
 Network error: status = 22 - Protocol driver call
 to determine properties failed
 Error -1:SSL: Password incorrect. Possibly the
 stash-file is missing or the password does not
 meet security requirements.
```

Example 3:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine  failed in
 srv__io_check
 Network error: status = 32 - Net-Lib protocol
 driver call to read data failed
 Error -1:SSL: The label for this server cannot
 be found in the key file.
```

Example 4:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine sybnet_listen() failed in
 srv__start_net
 Network error: status = 23 - Net-Lib protocol
 driver call to register a listener failed
 Error -1:Socket bind failed - errno 13
 Permission denied
```

Example 5:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine sybnet_listen() failed in
 srv__start_net
 Network error: status = 23 - Net-Lib protocol
 driver call to register a listener failed
 Error -1:Socket bind failed - errno 125
 Address already in use
```

Example 6:

```
E-IVM-005-002: OpenServer - Error: 16240/10/0:
 Net-Library routine sybnet_listen() failed in
 srv__start_net
 Network error: status = 23 - Net-Lib protocol
 driver call to register a listener failed
 Error -1:Socket bind failed - errno 126
 Cannot assign requested address
```

Message `E-IVM-005-002` indicates that the server encountered a communication problem.

The example messages that are listed here indicate that there are incorrect settings in the Server Editor. On UNIX and Linux operating systems, these settings are also specified in the connections data file, `$NCHOME/etc/omni.dat`.

Example messages 1, 2, 4, 5, and 6 are usually accompanied in the log by the following fatal message:

```
F-IVM-005-001: OpenServer - Fatal Error:
 16029/20/0: Failed to start any network listeners
```

System action: Not applicable.

User response: Not applicable.

Administrator response: OpenServer errors can have many causes. Examine the message text and the accompanying messages in the log for more information.

The example messages described here can be caused by the following conditions:

- In example message 1, SSL encryption is specified in the Server Editor but either the key file or the stash file is missing.
- In example message 2, SSL encryption is specified in the Server Editor and the key file is present but the password that is stored in the stash file is incorrect or does not meet security requirements. In some cases, the stash file might be missing.
- In example message 3, SSL encryption is specified in the Server Editor and the key file is present but the server certificate is missing. This error is not fatal, the server continues running but it cannot connect to the ObjectServer.
- In example message 4, the port number of the host that is specified in the Server Editor is incorrect or missing.
- In example message 5, the port number of the host that is specified in the Server Editor is already in use.
- In example message 6, the host name that is specified in the Server Editor is incorrect.

For information about configuring server communication details or SSL connections, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

F-IVM-005-001 OpenServer - Fatal Error: *%0d*:*%1s*

Explanation: The following examples show how this message is written to the log.

Example 1:

```
F-IVM-005-001: OpenServer - Fatal Error:
 16029/20/0: Failed to start any network listeners
```

Example 2:

```
F-IVM-005-001: OpenServer - Fatal Error:
 16013/20/0: Could not find server name 'NCOMS'
 in interfaces file
```

The example messages indicate that there is a problem with the server settings in the Server Editor. On UNIX and Linux operating systems, these settings are also specified in the connections data file, `$NCHOME/etc/omni.dat`.

System action: Not applicable.

User response: Not applicable.

Administrator response: OpenServer errors, such as example message 1, can have many causes. Examine the message text and the accompanying messages in the log for more information.

In example message 2, there is no entry in the Server Editor for the server named `NCOMS`.

For information about configuring server communication details, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-OBX-102-017 Language command from *%0s*@*%1s* **failed.** *%2s* **on line** *%3u* **of statement** *%4s*

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-OBX-102-018 Failed to resolve parsed language command. (*%0d***:***%1s***)**

Explanation: The following example shows how this message is written to the log:

```
E-OBX-102-018: Failed to resolve parsed language
 command. (-636:Type mismatch for column)
```

The example message indicates that the ObjectServer failed to resolve an SQL command. In this case, the column type in an `INSERT` command does not match the column type in the ObjectServer table.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example message, ensure that the source data type matches the data type in the ObjectServer table. When you use `INSERT` commands, enclose character values in single quotation marks (’). Do not enclose integer values in quotation marks.

Type mismatch errors can also occur when you use the `INSERT` command in an automation to insert rows into the alerts.journal ObjectServer table. In such cases, use the `jinsert` standard automation procedure to insert rows into the alerts.journal table.

For information about the `INSERT` command and the `jinsert` procedure, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-OBX-102-019 Failed to execute parsed language command. (*%0d*:*%1s*)

Explanation: The following example shows how this message is written to the log:

```
Error: E-OBX-102-019: Failed to execute
parsed language command.
(-402:Region soft limit exceeded)
```

The example message indicates that the table_store memstore exceeded its soft limit.

The E-OBX-102-019 message can indicate any one of several different errors, and is not limited to memstore problems. The message variable (*%0d*:*%1s*) contains the main problem information.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example error message, review the ObjectServer profiler and trigger statics logs and determine if there is a problem with the size of one of the dynamic tables. If the problem is caused by a lack of table_store space, and the ObjectServer dynamic tables are within normal size limits, then increase the table_store soft and hard limits.

For more information about changing table_store hard and soft limits, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-OBX-102-020 Failed to start the storage system. (*%0d*:*%1s*)

Explanation: The following example shows how this message is written to the log:

```
Error: E-OBX-102-020: Failed to start the
storage system. (-490:Extent statistics mismatch)
```

This error message indicates that the ObjectServer failed to start for any one of several reasons.

In the example error message, Extent statistics mismatch indicates that the ObjectServer database is corrupted. The database can become corrupted when an ObjectServer is shut down abnormally, for example, due to a system crash or if the nco_objserv process is stopped.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example error message, restore the last uncorrupted ObjectServer.

Note: The restore procedures described below results in some data loss. Data is recovered in the state that the Object Server was in when the files were created.

If you have a recent backup of the ObjectServer (made, for example, using the ALTER SYSTEM BACKUP command), use the following steps:

1. Make a backup of the $NCHOME/omnibus/db/*ObjectServer_name* directory.
2. Remove all files from the current $NCHOME/omnibus/db/*ObjectServer_name* directory.
3. Copy the master_store.tab and table_store.tab files from the backup directory to the current $NCHOME/omnibus/db/*ObjectServer_name* directory.
4. Start the ObjectServer.

If you do not have a recent backup of the ObjectServer, you can attempt to recover the ObjectServer by using the current database files:

1. Make a backup of the $NCHOME/omnibus/db/*ObjectServer_name* directory.
2. In the $NCHOME/omnibus/db/*ObjectServer_name* directory, identify all files with the suffixes _0 and _1 that are 0 bytes in size and remove the corresponding .chk and .log files.

   For example, in the following database directory, files with the _1 suffix are 0 bytes in size, so remove master_store_1.chk, master_store_1.log, table_store_1.chk, and table_store_1.log:

   ```
   root 126340 Dec 7 08:47 master_store_0.chk
   root 126340 Dec 7 08:47 master_store_0.log
   root 0 Dec 7 08:47 master_store_1.chk
   root 0 Dec 7 08:47 master_store_1.log
   root 2822144 Dec 7 08:45 master_store.tab
   root 7656 Dec 7 08:47 table_store_0.chk
   root 7656 Dec 7 08:47 table_store_0.log
   root 0 Dec 7 08:47 table_store_1.chk
   root 0 Dec 7 08:47 table_store_1.log
   root 3543040 Dec 7 08:45 table_store.tab
   ```
3. Start the ObjectServer.
4. If the ObjectServer fails to start, use the following steps:
   a. Restore the $NCHOME/omnibus/db/*ObjectServer_name* directory that you backed up in Step 1.
   b. In the restored $NCHOME/omnibus/db/*ObjectServer_name* directory, remove any .chk and .log files that you did not remove in Step 2.

      For example, in the database directory in Step 2, you must remove master_store_0.chk, master_store_0.log, table_store_0.chk, and table_store_0.log.
   c. Start the ObjectServer.
5. If the ObjectServer still does not start, use the following steps:
   a. Remove all .chk and .log files from the $NCHOME/omnibus/db/*ObjectServer_name* directory.

      Do not remove the table_store.tab and master_store.tab files.
   b. Start the ObjectServer.

For more information about checkpoints and ObjectServer backups, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

E-OBX-102-068 Failed to send wait message to client blocked meta/data wait. (*%0d***:***%1s***)**

Explanation: The following example shows how this message is written to the log:

```
E-OBX-102-068: Failed to send wait message
 to client blocked meta/data wait.
 (-2250:Failed to send message to client)
```

The example message indicates that the ObjectServer is busy and failed to send a wait message to a client that tried to connect to it.

System action: Not applicable.

User response: Not applicable.

Administrator response: The example message indicates that there is a performance issue at the ObjectServer. This error is typically seen when there is a problem with memory usage by dynamic tables or a problem with one or more triggers.

The error can also occur when a gateway resynchronizes with the ObjectServer. The ObjectServer can be locked during the resynchronization and the message is logged until the resynchronization is complete.

For information about monitoring ObjectServer performance, and about triggers and automations, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

System action: Not applicable.

User response: Not applicable.

Administrator response: Not applicable.

E-OBX-102-122 Client *%0u* **has missed** *%1d* **IDUC cycles for user** *%2s* **on host** *%3s* **from application** *%4s*:*%5s* **.**

Explanation: The following example shows how this message is written to the log:

```
10/22/09 21:46:01: Error: E-OBX-102-122:
Client '1' has missed '2' IDUC cycles
for user 'Gateway' on host 'hostname'
from application 'GATEWAY'.
```

The example message indicates that the client did not request IDUC information from the ObjectServer within the granularity period that is specified by the ObjectServer **Granularity** property. If this problem is not corrected, a client that misses multiple IDUC cycles will cause the memory usage of the ObjectServer to increase and might increase the profiling times for some clients.

System action: Not applicable.

User response: Not applicable.

Administrator response: If this message appears regularly in the log, you can perform one or more of the following actions to address it:

- Ensure that the ObjectServer **Profile** property is enabled, and review the profile and trigger statistics logs in the `$NCHOME/omnibus/logs/`*`ObjectServer_name`*`_profiler_report.log1` and `$NCHOME/omnibus/logs/`*`ObjectServer_name`*`_trigger_stats.log1` files.

  Ensure that the total time from client requests and automations in both the profile and trigger statistics logs is less than the ObjectServer **Granularity** property setting (the default is 60 seconds).

  If the total time is regularly longer than the **Granularity** property setting, ObjectServer performance will degrade. Troubleshoot the clients and triggers that are identified in the log files as consuming the most IDUC cycles. Be aware that the client time might be longer than the granularity period due to ObjectServer multithreading.
- Enable debug logging for the client named in the error message and address any errors. Review the client properties for available performance optimizations. If the client IDUC period is shorter than the ObjectServer granularity, it might need to be increased.
- Enable the disconnect_iduc_missed trigger. This trigger disconnects clients that fail to communicate with the ObjectServer for 100 granularity periods, to prevent the ObjectServer from consuming too much memory serving clients that miss IDUC cycles.

  If the trigger is unnecessarily disconnecting clients, increase the `%signal.missed_cycles` setting to at least 100.

E-REG-002-025 Region *%0s* **, from directory** *%1s* **, has been recovered in a corrupt state:** *%2s*

Explanation: The following example shows how this message is written to the log:

```
Error: E-REG-002-025: Region 'table_store',
 from directory '/opt/netcool/omnibus/db/NCOMS/',
 has been recovered in a corrupt state:
 Extent statistics mismatch
```

This error message indicates that the ObjectServer database is corrupted.

In the example error message, `Extent statistics mismatch` indicates that the NCOMS ObjectServer database is corrupted. The database can become corrupted when an ObjectServer is shut down abnormally, for example, due to a system crash or if the `nco_objserv` process is stopped.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example error message, you must restore the last uncorrupted ObjectServer.

Note: The restore procedures described below will result in some data loss. Data will be recovered in the state that the Object Server was in when the files were created.
If you have a recent backup of the ObjectServer (made, for example, using the `ALTER SYSTEM BACKUP` command), use the following steps:

1. Make a backup of the `$NCHOME/omnibus/db/`*`ObjectServer_name`* directory.
2. Remove all files from the `$NCHOME/omnibus/db/`*`ObjectServer_name`* directory.
3. Copy the `master_store.tab` and `table_store.tab` files from the backup directory to `$NCHOME/omnibus/db/`*`ObjectServer_name`*.
4. Start the ObjectServer.

If you do not have a recent backup of the ObjectServer, you can attempt to recover it using the current database files:

1. Make a backup of the `$NCHOME/omnibus/db/`*`ObjectServer_name`* directory.
2. In the `$NCHOME/omnibus/db/`*`ObjectServer_name`* directory, identify all files with the suffixes `_0` and `_1` that are 0 bytes in size and remove the corresponding `.chk` and `.log` files.

   For example, in the following database directory, files with the `_1` suffix are 0 bytes in size so you must remove `master_store_1.chk`, `master_store_1.log`, `table_store_1.chk`, and `table_store_1.log`:

   ```
   root 126340 Dec 7 08:47 master_store_0.chk
   root 126340 Dec 7 08:47 master_store_0.log
   root 0 Dec 7 08:47 master_store_1.chk
   root 0 Dec 7 08:47 master_store_1.log
   root 2822144 Dec 7 08:45 master_store.tab
   root 7656 Dec 7 08:47 table_store_0.chk
   root 7656 Dec 7 08:47 table_store_0.log
   root 0 Dec 7 08:47 table_store_1.chk
   root 0 Dec 7 08:47 table_store_1.log
   root 3543040 Dec 7 08:45 table_store.tab
   ```
3. Start the ObjectServer.

4. If the ObjectServer fails to start, use the following steps:
   a. Restore the `$NCHOME/omnibus/db/ObjectServer_name` directory that you backed up in Step 1.
   b. In the restored `$NCHOME/omnibus/db/ObjectServer_name` directory, remove any `.chk` and `.log` files that you did not remove in Step 2.

      For example, in the database directory in Step 2, you must remove `master_store_0.chk`, `master_store_0.log`, `table_store_0.chk`, and `table_store_0.log`.
   c. Start the ObjectServer.
5. If the ObjectServer still does not start, use the following steps:
   a. Remove all `.chk` and `.log` files from the `$NCHOME/omnibus/db/ObjectServer_name` directory.

      Do not remove the `table_store.tab` and `master_store.tab` files.
   b. Start the ObjectServer.

For more information about checkpoints and ObjectServer backups, see the *IBM Tivoli Netcool/OMNIbus Administration Guide*.

User response: Not applicable.

Administrator response: Not applicable.

E-STK-102-013 [nstk]: *%0s*: Failed to register server's PID. (*%1d*:*%2s*)

Explanation: The following example shows how this message is written to the log:

```
Error: E-STK-102-013: [nstk]: NCOMS1:
 Failed to register server's PID. (-100:pid file
 exists, service already running)
```

This error message indicates that the ObjectServer failed to start because its process is already running.

In the example message, the NCOMS1 ObjectServer failed to start. Some possible causes for this failure are as follows:

- Another ObjectServer instance with the same name is already running on the same computer.
- The process ID (PID) file, `$NCHOME/omnibus/var/NCOMS1.pid`, has an entry for an instance of the ObjectServer that is no longer running, but another process on the computer is now using the same PID.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example message, verify that the PID in the `NCOMS1.pid` file exists and identify what process it belongs to.

If the PID belongs to an ObjectServer process (`nco_objserv`), an instance of the NCOMS1 ObjectServer is already running, so do not attempt to start a new instance.

If the PID belongs to another process (which is, therefore, using the same PID as a previously run instance of the ObjectServer) delete the PID file and start the ObjectServer again.

E-STK-102-014 [nstk]: *%0s*: Failed to start server processing loop. (*%1d*:*%2s*)

Explanation: The following example shows how this message is written to the log:

```
Error: E-STK-102-014: [nstk]: NCOMS01:
Failed to start server processing loop.
(-19:General failure)
```

This error message indicates that the server process encountered a problem and will shutdown.

System action: Not applicable.

User response: Not applicable.

Administrator response: Review the preceding messages in the error log for more information about the cause of this error.

E-STK-102-026 [nstk]: User installed client post connection handler(s) failed to complete successfully. (*%0d*:*%1s*)

W-STO-103-001 Truncating column *%0s*

Explanation: The following example shows how this message is written to the log:

```
Warning: W-STO-103-001: Truncating column Detail
```

This warning message indicates that the value being set for an ObjectServer `char` or `varchar` column is larger than the specified size of the column. The ObjectServer truncates the value so that it fits into the column.

In the example message, the Detail column in the alerts.details table is being truncated because a probe is sending values that are larger than the maximum size of the column.

System action: Not applicable.

User response: Not applicable.

Administrator response: To address the problem indicated by the example message, either amend the probe rules file to modify the data before it is sent to the ObjectServer, or alter the size of the Detail column.

For more information about modifying rules files, see the *Tivoli Netcool/OMNIbus Probe and Gateway Guide*.

You can change the size of the Detail column using the SQL interactive interface (**`nco_sql`** or **`isql`**) or Netcool/OMNIbus Administrator (**`nco_config`**).

For more information about altering ObjectServer tables, see the *Tivoli Netcool/OMNIbus Administration Guide*.

HEMIN

Messages for the HEMIN component.

HEMIN0010W

System Action

During installation, the installer requests the user name and password of the ObjectServer to use for the connection from the Web GUI to the ObjectServer. The installer does not validate the correctness of the password and completes the installation, even if the password is incorrect, but no data is retrieved from the ObjectServer.

User response

Not applicable.

Administrator response

After installation, verify that the password is correct. If the password is incorrect, change it in the following files:

- `ncwDataSourceDefinitions.xml`: You can edit this file manually. For more information about the `ncwDataSourceDefinitions.xml` file and how to edit it, see the *IBM Tivoli Netcool/OMNIbus Web GUI Administration and User's Guide* and search for *Data source configuration file reference*. After you edit this file, restart the Tivoli Integrated Portal server so that the change takes effect.
- `wimconfig.xml`: You can edit this file by running the **`confvmm4ncos`** script. For more information about how to run this script, see the *IBM Tivoli Netcool/OMNIbus Installation and Deployment Guide* and search for *Defining an ObjectServer as a user repository*.

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

© Copyright IBM Corp. 2011, 2012

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

United States of America

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the

names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.

Portions of this product include software developed by Daniel Veillard.
