

## Core Package and Host Package installation and configuration

# Core Package installation and configuration

# Managing your environment

# Functionality by deliverable

	OnCommand Unified Manager Installation and Setup Guide	OnCommand Console Help (in product and online)	OnCommand Unified Manager Guide to Common Workflows	OnCommand Unified Manager Windows PowerShell Cmdlets Guide	Operations Manager Help	Operations Manager Administration Guide	Management Console Help	Performance Advisor Administration Guide	Guide to Common Provisioning and Data Protection Workflow	Host Agent Installation and Administration Guide
		Primary information resource								
		Secondary information resource when more than one resource is identified								
Administration, host service										
Administration, OnCommand Unified Manager										
Administration, VMware objects										
Alarms										
Architecture										
Backup, physical										
Backup, VMware in OnCommand Unified Manager										
Certificates										
Cloning										
Clusters										
Core Package components										
Custom naming of objects										
Dashboards										
DataFabric Manager server										
Dataset, physical objects										
Dataset, virtual objects										
Disaster recovery										
Events										
ESX servers										
File SRM										
Groups										
Host Agent										
Host Package components										
Host service										
Host service configuration										
Installation, Core Package										
Installation, Host Package										
Inventory objects										
Jobs, in OnCommand Unified Manager										
Licensing										
LUN management										
Microsoft Cluster Server										
Migration, vFiler units and datasets										
Migration, nondisruptive										

## Functionality by deliverable (cont.)

Monitoring, physical environment										
Monitoring, SAN hosts										
Monitoring, VMware objects in OnCommand console										
Open Systems SnapVault (OSSV)										
Performance										
Permissions, roles, and users (RBAC)										
Protection policies, physical environment										
Protection policies, virtual environment										
Provisioning policies										
Provisioning tasks										
Reports										
Resource management										
Resource pools										
Restore process, physical										
Restore process, virtual										
SAN										
SAN host monitoring										
Scripts										
Security										
Snapshot copies										
SNMP management										
Services, starting and stopping										
Storage objects, physical										
Storage objects, virtual										
Storage services										
System requirements										
Upgrades and updates										
Users, roles, and permissions										
Veritas Cluster Server, installing with										
vFiler units, protecting										
Virtual machines										
VMware virtual object management										
Vservers										

# Deliverable content

## OnCommand Core Package Release Notes

### Reference for:

- Commands, new and changed
- Documentation corrections
- Fixed issues
- Known issues
- Limitations
- New features
- System requirements

## OnCommand Unified Manager Guide to Common Workflows for 7-Mode

### Reference for end-to-end workflows in OnCommand related to:

- Changing a storage service containing virtual objects
- Creating backups of physical and virtual objects
- Delegating control for virtual administrators (RBAC)
- Resolving conformance issues
- Restoring legacy and single file backups (VMware)
- Using dashboards to resolve issues

## OnCommand Host Package Release Notes

### Reference for:

- Documentation corrections
- Fixed issues
- Known issues
- Limitations
- New features
- System requirements

## OnCommand Unified Manager Windows PowerShell Cmdlets Guide for 7-Mode

### Reference for cmdlets related to:

- Backup management (list, remove)
- On-demand backup creation
- Restoring VMware virtual objects
- User registration

### Reference for host service cmdlets related to:

- Certificate generation
- Configuration of the host agent
- Listing of backups and resources
- Restoring from backup if DataFabric Manager server is unavailable

## OnCommand Unified Manager Installation and Setup Guide

### Reference for tasks and concepts related to:

- Architecture
- Component overview
- Installing Core and Host Packages
- Initial configuration of OnCommand environment
- Installing OnCommand with Microsoft Cluster Server
- Installing OnCommand with Veritas Cluster Server

## Operations Manager Help

### Reference for tasks related to:

- Alarms
- Backup Manager
- DataFabric Manager server
- Disaster Recovery Manager
- Discovery
- Events
- File Storage Resource Manager (FSRM)
- Groups
- Host bus adapter (HBA), viewing information
- LUN management
- Manual (man) pages for DataFabric Manager server commands
- Reports
- Role-based access control (RBAC)
- SAN host monitoring
- Security
- Storage monitoring
- User quotas

## OnCommand Console Help

### Reference for tasks and concepts related to:

- Administration of virtual objects
- Alarms
- Backups
- Dashboards
- Datasets of virtual objects
- Events
- ESX servers
- Host services
- Inventory objects
- Jobs
- Monitoring virtual and physical objects
- Protection policies, virtual
- Reports
- Restore process, virtual
- Scripts
- Storage objects, virtual
- VMware virtual objects

## Operations Manager Administration Guide

### Reference for concepts related to:

- Alarms
- Backup Manager
- DataFabric Manager server
- Disaster Recovery Manager
- Discovery
- Events
- File Storage Resource Management (FSRM)
- Groups
- LUN management
- Manual (man) pages for DataFabric Manager server commands
- Reports
- Role-based access control (RBAC)
- Security
- Storage monitoring
- User quotas

## Deliverable content (cont.)

### Management Console Help

#### Reference for tasks and concepts related to:

- Backups in a physical environment
- Custom naming of objects
- Data Protection in physical environments
- Data Motion
- Datasets, physical
- Disaster recovery
- Migration
- Policies
- Resource pools
- Schedules for backups
- Storage provisioning
- Storage services
- vFiler units and templates

#### Reference for tasks related to:

- Performance of storage systems and vFiler units
- Performance reports
- Short-term trend analysis

### Host Agent Installation and Administration Guide

#### Reference for tasks related to:

- Configuration
- Installation and upgrade

### Performance Advisor Administration Guide

#### Reference for concepts and tasks performed in Operations Manager related to:

- Analysis real-time data
- Counters
- Customizing views
- Monitoring performance information
- Role -based access control (RBAC)
- Secure transport connections

### Guide to Common Provisioning and Data Protection Workflows for 7-Mode

#### Reference for end-to-end workflows in Management Console related to:

- Data protection
- Data protection with SnapManager
- Disaster recovery
- Migration of datasets using vFiler units
- NAS and SAN provisioning
- Storage services configuration
