(12.1.x and later) Configuring Fiddler Debugging

 1 | Updated November 9, 2014 by [EdSilky](#) | Tags: *None*

Page Actions ▼

Starting in 12.1 we added support for configuring fiddler output when making server requests in CAD Integrator.

Typically you can do this by copying an existing environment, and adding "localhost" as a proxy host, and "8888", or whatever port you have Fiddler configured to use, for the proxy port:

NOTE: You will need to have Fiddler open when you log in using this configuration, or else the log in will fail.

You will be able to view and send fiddler logs. That the standard request and response are not meant to be user readable, but can still be useful for support to view or pass to development. For example:

Standard requests and responses will be handled by the CI Plugin. Sometimes, however, an unexpected error occurs and the plugin does not give a very informative message, but the fiddler log may:
