

Quick Start Guide

This guide describes a quick and easy way to install the product.

National Language Version: To obtain the Quick Start Guide in other languages, print the language-specific PDF from the installation media.

Product overview

IBM® Endpoint Manager, built on BigFix® technology, delivers endpoint lifecycle and security management through a single, lightweight, extensible infrastructure. The solution consolidates management of servers, desktops, laptops, and mobile devices with clear, accurate reporting and unparalleled control over today's increasingly complex physical and virtual infrastructures.

IBM Endpoint Manager enables organizations to securely manage even the most intermittently connected mobile users, delivering continuous updates regardless of connectivity to the internal corporate network and enforcing policies offline to ensure regulatory compliance. This dynamic, content-driven messaging and management system allows for quick delivery and adoption of new product capabilities and enables organizations to easily tailor solutions to meet their specific requirements.

IBM Endpoint Manager V9.1 delivers consolidated lifecycle management and security and compliance solutions. It adds new core capabilities and extends its platform coverage to include:

- More flexible deployment options with the addition of support for Red Hat Enterprise Linux and DB2® as an IBM Endpoint Manager Server platform.
- Native encryption capabilities for server to client communication and additional security configuration options for managing Internet-connected computers and mobile devices.
- Extended support for deployment of agents to Solaris 11, Debian 6, and Ubuntu 12.04 in addition to previously released support for Mac, OS X 10.8 and Windows 8 and Windows Server 2012.
- New, simplified Representational State Transfer (REST) based application programming interfaces (APIs) and an easy-to-use command line interface.

IBM Endpoint Manager for Security and Compliance V9.1 consolidates a suite of capabilities, including vulnerability management, automated security configuration management, and patch management to cut costs, reduce complexity, and lower security risks. IBM Endpoint Manager for Security and Compliance brings together management of multiple endpoint protection tools, network self quarantine, and removable device control under a single infrastructure. This means one management and reporting console, one management server, and one endpoint agent.

IBM Endpoint Manager for Security and Compliance provides the following capabilities:

- A new web-based application named IBM Endpoint Manager for Security and Compliance Analytics (SCA) for endpoint security and risk assessment.
- A new set of Defense Information System Agency (DISA) Security Technical Implementation Guide (STIG) content sites for Windows, Linux, and UNIX operating systems.
- Several new security configuration management checklists based on guidance provided by National Institute of Standard and Technology (NIST) through the United States Government Configuration Baseline (USGCB).
- Microsoft Forefront as a formal part of the Client Manager for Endpoint Protection (CMEP) content.
- Expanded coverage for Center for Internet Security (CIS) security benchmarks for Windows and UNIX operating systems.
- Enhanced reporting functions including save to PDF and scheduled report options.
- Enhanced policy management for managing updates to customized security configuration management.

IBM Endpoint Manager for Security and Compliance ensures endpoint security across the organization. The suite is upgraded with the following major capabilities:

- Security configuration checklists are updated to align with the most up-to-date Center for Internet Security (CIS) and Defense Information Systems Agency (DISA) security benchmarks.

1 Step 1: Access the software and documentation

The IBM Endpoint Manager software can be accessed from Passport Advantage® or from DVD.

If you download your product from Passport Advantage, follow the instructions in the download document available at <http://www.ibm.com/support/docview.wss?rs=1015&uid=swg21662495>

The IBM Endpoint Manager package includes the following product DVDs:

- IBM Endpoint Manager Version 9.1 Platform Installer
- IBM DB2 Workgroup Server Edition 10.5 - Linux 64-bit - Limited Use

For complete documentation, see http://pic.dhe.ibm.com/infocenter/tivihelp/v26r1/index.jsp?topic=/com.ibm.tem.doc_9.1/welcome/welcome.html.

2 Step 2: Evaluate the hardware and system configuration

See the IBM Endpoint Manager System Requirements at <http://www.ibm.com/support/docview.wss?rs=1015&uid=swg21652841>.

3 Step 3: Get started and install IBM Endpoint Manager

A complete IBM Endpoint Manager installation is composed of installation and registration of the platform, followed by the configuration of the applications:

1. For an introduction to the product platform and applications, see Getting Started
2. To learn about the installation of the platform and the product components, see Installation Guide.
3. Install IBM Endpoint Manager by following the instructions in the Installation Guide.
