## DATACOM PATCH & JUMPER CABLES

### Cat 5e and Cat 6 Datacom Patch and Jumper cables

Connecting devices outside of a wall requires the use of standard cable. Solid cable used for running circuits inside of walls and panels will not withstand the continuous flexing that occurs when components are moved frequently. Jumpers made on site are strongly discouraged.

Pre-made jumper cables are tested and certified to 350 MHz. All cables have either molded or snagless boots that join the connector to the cable and prevents disconnection due to accidental stresses.

Connectors are plated to 50 micro-inches of gold. Cable is stranded Cat 5e (4 pair/24 AWG) UTP, meeting and tested to UL and CSA requirements.
