**2** 2.Let the remote control towards to the air-condition, then press the "ON/OFF" key once, it will go in the automatically searching mode.

**3** 3. When the air-condition is turned on, press the "confirm" key at once.

**4** 4. Check all the key's function, if normal that means setting successful, if not turn to step1 and step2 again.

### Problem Solving

When you are using or setting up the controller:
1. Checking your Air-Conditioner is on working state or not.
2. Checking it has batteries or not and the polarity of battery is right or not.
3. Ensure that your Air-conditioner receiver is working in order. If your Air-conditioner is not receiving it properly, it won't able to function by this remote controller.
4. If this remote controller gets the wrong operation, it maybe stop working. In this case, you take betteries out and repeat to setup after twenty minutes.

### child lock function

Lock: keep pressing the "light" key until there is a small lock appear on the upper right coner of the screen.
Unlock : keep press "radiating" key until the small lock is disappear.
Tips : after setting the code absolutely right, please lock it to prevent losing the code.
This function is make the remote control lose the setting function, avioding the code lose by wrong operation, it won't has any affect to the remote's performance.
