8. Precautions for use of LCD Modules

8.1 Handling Precautions

8.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

8.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

8.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

8.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

8.1.5 If the display surface become contaminated, breathe on the surface and gently wipe it with a soft dry cloth. if still not completely clear, moisten cloth with one of the following solvents:

-----Isopropyl alcohol

-----Ethyl alcohol

Solvents other than those mentioned above may damage the Polarizer. Especially, see the following:

-----Water

-----Ketone

-----Aromatic solvents

8.1.6 Do not attempt to disassemble the LCD Module

8.1.7 NC terminal should be open. do not connect anything

8.1.8 If the logic circuit power is off, do not apply the input signals

8.1.9 To prevent destruction of the elements by electricity, be careful to maintain an optimum work environment

- a. Be sure to ground the body when handling the LCD Modules
- b. Tools required for assembly, such as soldering
- c. irons, must be properly ground.
- d. To reduce the amount of static electricity generated do not conduct assembly and other work under dry conditions.
- e. The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.
