

有关敝公司产品的注意事项

请务必在使用敝公司产品之前阅读。

注意

■ 产品目录中的记载内容

本产品目录中所记载的内容为2021年1月的内容。因产品改良等原因，可能会不经预告而变更其记载内容，或是停止供应本产品目录中所记载的产品。所以，请务必在使用前先确认最新的产品信息。

未按照本产品目录中所记载的内容或交货规格说明书使用敝公司产品，即便其致使用设备发生损害、不良情况等时，敝公司也不承担任何责任，敬请知悉。

■ 签署交货规格说明书

就本产品目录中所记载产品的产品规格等相关内容，敝公司备有交货规格说明书，详情请向敝公司咨询。在使用敝公司产品前请务必就交货规格说明书之内容确认并批准之。

■ 实装前的事前评估

使用敝公司产品时，请务必事先安装到使用设备之后，在实际使用的环境下进行评估和确认。

■ 用途的限定

1. 可以使用的设备

本产品目录中所记载的产品预设为使用于一般电子设备 [音像设备、办公自动化设备、家电产品、办公设备、信息通讯设备 (手机、电脑等)] 以及面向本产品目录或是交货规格说明书中另行注明的设备的通用性、标准性用途。

另外，面向汽车用电子设备、电信基础设施 / 工业设备、医疗设备 (国际 (GHTF) 第一类、第二类、第三类) 方面的应用，敝公司也备有预设的产品线，请参考本产品目录或是交货规格说明书的内容，使用相对应的产品。

2. 需要另行确认的设备

若考虑将本产品目录中所记载的产品使用于当产品发生故障、品质不良，或是由此引起的运转失常而可能会危及生命、身体或是财产，以及有可能给社会造成深刻影响的以下设备 (不包括本产品目录或是交货规格说明书中另行注明可以使用设备) 等时，请务必事先向敝公司咨询。

- (1) 运输用设备 (汽车驱动控制设备、火车控制设备、船舶控制设备等)
- (2) 交通信号设备
- (3) 防灾 / 保安设备
- (4) 医疗设备 (国际 (GHTF) 第三类)
- (5) 高公共性信息通讯设备 / 信息处理设备 (电话交换机、电话 / 无线 / 广播电视基站等)
- (6) 其他与上述设备有同等品质与可靠性要求的设备

3. 禁止使用的设备

请勿将敝公司产品使用于对安全性和可靠性有着极高要求的以下设备。

- (1) 航天设备 (人工卫星、火箭等)
- (2) 航空设备 ^(注释1)
- (3) 医疗设备 (国际 (GHTF) 第四类)、植体 (体内植入型) 医疗设备 ^(注释2)
- (4) 发电控制设备 (面向核能 / 水力 / 火力发电厂等的设备)
- (5) 海底设备 (海底中继设备、海中的作业设备等)
- (6) 军事设备
- (7) 其他与上述设备有同等品质与可靠性要求的设备

注释1：仅限于对航空设备的安全运行不产生直接干扰的设备 [机内娱乐设备、机内照明设备、电动座椅、餐饮设备等]，在满足敝公司另行指定的相关条件时，亦可将敝公司产品用于以上用途。在贵公司考虑将敝公司的产品用于以上用途时，请务必事先向敝公司咨询相关的信息。

注释2：包括注入人体内的部分和与此相连接的体外部分。

4. 责任的限制

未经敝公司的事先书面同意，把本产品目录中所记载的产品使用于非敝公司预设用途的设备、前述需要向敝公司咨询的设备或敝公司禁止使用的设备，从而给客户或第三方造成损害的，敝公司不承担任何责任，敬请知悉。

■ 安全设计

需将敝公司的产品使用于对安全性和可靠性要求较高的设备、电路上时，请进行充分的安全性评估和可靠性评估。另外，请通过设置保护电路、保护装置的系统，设置冗余电路不会被单一故障影响安全性的系统等失效导向安全 (fail-safe) 设计，确保充分的安全性。

■ 有关知识产权

本产品目录中所记载的信息是用于说明相关产品的典型操作以及相关应用。此类信息的使用不代表对于敝公司以及第三方的知识产权以及其他权利的使用许可或是不侵权保证。

■ 保证范围

敝公司产品的保证范围仅限于已经交付的敝公司产品本身，由敝公司产品的故障或不良情况所诱发的损害，敝公司不承担任何责任，敬请知悉。但是，以书面形式另行签署了交易基本合同书、品质保证协定书等时，敝公司将根据该合同的条件提供保证。

■ 正规销售渠道

本产品目录中所记载的内容适用于从敝公司营业所、销售子公司、销售代理店 (即“正规销售渠道”) 购买的敝公司产品，并不适用于从其他渠道购买的敝公司产品，敬请知悉。

■ 出口时的注意事项

本产品目录中所记载的部分产品在出口时须事先确认《外汇和对外贸易法》以及美国在出口管理方面的相关法规，并办理相关手续。如有不明之处，请向敝公司咨询。

金属绕线型片状功率电感器 (MCOIL™ ME 系列)

回流焊

Unit: mm (inch)

⑥ Top Tape Strength

The top tape requires a peel-off force of 0.1 to 1.0N in the direction of the arrow as illustrated below.

METAL WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ ME SERIES/MCOIL™ ME-H SERIES)

RELIABILITY DATA

1. Operating Temperature Range		
Specified Value	ME series	−40~ +125℃
	ME-H series	
Test Methods and Remarks	Including self-generated heat	
2. Storage Temperature Range		
Specified Value	ME series	−40~ +85℃
	ME-H series	
Test Methods and Remarks	0 to 40℃ for the product with taping.	
3. Rated current		
Specified Value	ME series	Within the specified tolerance
	ME-H series	
4. Inductance		
Specified Value	ME series	Within the specified tolerance
	ME-H series	
Test Methods and Remarks	Measuring equipment : LCR Meter (HP 4294A or equivalent) Measuring frequency : 1MHz、0.5V	
5. DC Resistance		
Specified Value	ME series	Within the specified tolerance
	ME-H series	
Test Methods and Remarks	Measuring equipment : DC ohmmeter (HIOKI 3227 or equivalent)	
6. Self resonance frequency		
Specified Value	ME series	—
	ME-H series	
7. Temperature characteristic		
Specified Value	ME series	Inductance change : Within ±15%
	ME-H series	
Test Methods and Remarks	Measurement of inductance shall be taken at temperature range within −40℃~+125℃. With reference to inductance value at +20℃., change rate shall be calculated.	
8. Resistance to flexure of substrate		
Specified Value	ME series	No damage
	ME-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. As illustrated below, apply force in the direction of the arrow indicating until deflection of the test board reaches to 2 mm. Test board size : 100×40×1.0 mm Test board material : Glass epoxy-resin Solder cream thickness : 0.12 mm 	

9. Insulation resistance : between wires				
Specified Value	ME series	—		
	ME-H series			
10. Insulation resistance : between wire and over-coating				
Specified Value	ME series	—		
	ME-H series			
11. Withstanding voltage : between wire and over-coating				
Specified Value	ME series	—		
	ME-H series			
12. Adhesion of terminal electrode				
Specified Value	ME series	No abnormality.		
	ME-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. Applied force : 10N to X and Y directions. Duration : 5s. Solder cream thickness : 0.12mm.			
13. Resistance to vibration				
Specified Value	ME series	Inductance change : Within ±10% No significant abnormality in appearance.		
	ME-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. Then it shall be submitted to below test conditions.			
	Frequency Range10~55Hz			
	Total Amplitude1.5mm (May not exceed acceleration 196m/s ²)			
	Sweeping Method10Hz to 55Hz to 10Hz for 1min.			
	Time	X	For 2 hours on ach X, Y, and Z axis.	
		Y		
		Z		
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.				
14. Solderability				
Specified Value	ME series	At least 90% of surface of terminal electrode is covered by new solder.		
	ME-H series			
Test Methods and Remarks	The test samples shall be dipped in flux, and then immersed in molten solder as shown in below table. Flux : Methanol solution containing rosin 25%.			
	Solder Temperature		245±5°C	
	Time		5±0.5 sec.	
	※Immersion depth : All sides of mounting terminal shall be immersed.			
15. Resistance to soldering heat				
Specified Value	ME series	Inductance change : Within ±10% No significant abnormality in appearance.		
	ME-H series			
Test Methods and Remarks	The test sample shall be exposed to reflow oven at 230°C for 40 seconds, with peak temperature at 260+0/—5°C for 5 seconds, 2 times. Test board material : Glass epoxy-resin Test board thickness : 1.0mm Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			

16. Thermal shock			
Specified Value	ME series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	ME-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. The test samples shall be placed at specified temperature for specified time by step 1 to step 4 as shown in below table in sequence. The temperature cycle shall be repeated 100 cycles.		
	Conditions of 1 cycle		
	Step	Temperature ($^{\circ}\text{C}$)	Duration (min)
	1	-40 ± 3	30 ± 3
	2	Room temperature	Within 3
	3	$+85\pm 2$	30 ± 3
	4	Room temperature	Within 3
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
17. Damp heat			
Specified Value	ME series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	ME-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow.		
	The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table.		
	Temperature	$60\pm 2^{\circ}\text{C}$	
	Humidity	$90\sim 95\%\text{RH}$	
	Time	$500+24/-0$ hour	
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
18. Loading under damp heat			
Specified Value	ME series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	ME-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow.		
	The test samples shall be placed in thermostatic oven set at specified temperature and humidity and applied the rated current continuously as shown in below table.		
	Temperature	$60\pm 2^{\circ}\text{C}$	
	Humidity	$90\sim 95\%\text{RH}$	
	Applied current	Rated current	
	Time	$500+24/-0$ hour	
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.		
19. Low temperature life test			
Specified Value	ME series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	ME-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.		
	Temperature	$-40\pm 2^{\circ}\text{C}$	
	Time	$500+24/-0$ hour	
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.		
20. High temperature life test			
Specified Value	ME series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	ME-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.		
	Temperature	$125\pm 2^{\circ}\text{C}$	
	Time	$500+24/-0$ hour	
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.		
21. Loading at high temperature life test			
Specified Value	ME series	—	
	ME-H series		

22. Standard condition		
Specified Value	ME series	Standard test condition : Unless otherwise specified, temperature is $20 \pm 15^{\circ}\text{C}$ and $65 \pm 20\%$ of relative humidity. When there is any question concerning measurement result: In order to provide correlation data, the test shall be condition of $20 \pm 2^{\circ}\text{C}$ of temperature, $65 \pm 5\%$ relative humidity. Inductance is in accordance with our measured value.
	ME-H series	

METAL WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ ME SERIES/MCOIL™ ME-H SERIES)

■ PRECAUTIONS

1. Circuit Design

Precautions	◆Operating environment 1. The products described in this specification are intended for use in general electronic equipment,(office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.
-------------	--

2. PCB Design

Precautions	◆Land pattern design 1. Please refer to a recommended land pattern.
Technical considerations	◆Land pattern design Surface Mounting • Mounting and soldering conditions should be checked beforehand. • Applicable soldering process to this products is reflow soldering only.

3. Considerations for automatic placement

Precautions	◆Adjustment of mounting machine 1. Excessive impact load should not be imposed on the products when mounting onto the PC boards. 2. Mounting and soldering conditions should be checked beforehand.
Technical considerations	◆Adjustment of mounting machine 1. When installing products, care should be taken not to apply distortion stress as it may deform the products.

4. Soldering

Precautions	◆Reflow soldering 1. Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified. 2. The product shall be used reflow soldering only. 3. Please do not add any stress to a product until it returns in normal temperature after reflow soldering. ◆Lead free soldering 1. When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently.
Technical considerations	◆Reflow soldering 1. If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products. Recommended reflow condition (Pb free solder) Temperature [°C] Heating Time [sec] 150~180°C 100~120sec 30±10sec 230°C min Peak: 250+0/-5°C 5sec max

5. Cleaning

Precautions	◆Cleaning conditions 1. Washing by supersonic waves shall be avoided.
Technical considerations	◆Cleaning conditions 1. If washed by supersonic waves, the products might be broken.

6. Handling	
Precautions	◆Handling 1. Keep the product away from all magnets and magnetic objects. ◆Breakaway PC boards (splitting along perforations) 1. When splitting the PC board after mounting product, care should be taken not to give any stresses of deflection or twisting to the board. 2. Board separation should not be done manually, but by using the appropriate devices. ◆Mechanical considerations 1. Please do not give the product any excessive mechanical shocks. 2. Please do not add any shock and power to a product in transportation. ◆Pick-up pressure 1. Please do not push to add any pressure to a winding part. Please do not give any shock and push into a ferrite core exposure part. ◆Packing 1. Please avoid accumulation of a packing box as much as possible.
Technical considerations	◆Handling 1. There is a case that a characteristic varies with magnetic influence. ◆Breakaway PC boards (splitting along perforations) 1. The position of the product on PCBs shall be carefully considered to minimize the stress caused from splitting of the PCBs. ◆Mechanical considerations 1. There is a case to be damaged by a mechanical shock. 2. There is a case to be broken by the handling in transportation. ◆Pick-up pressure 1. Damage and a characteristic can vary with an excessive shock or stress. ◆Packing 1. If packing boxes are accumulated, that could cause a deformation on packing tapes or a damage on the products.
7. Storage conditions	
Precautions	◆Storage 1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled. ▪ Recommended conditions - Ambient temperature : 0~40°C - Humidity : Below 70% RH ▪ The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes. For this reason, product should be used within 6 months from the time of delivery. In case of storage over 6 months, solderability shall be checked before actual usage.
Technical considerations	◆Storage 1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.

金属多层片状功率电感器 (MCOIL™ MC 系列)

回流焊

RELIABILITY DATA

1. Operating Temperature Range

Specified Value	BK series	-55~+125°C
	BKH series	
	BKP series	-55~+125°C(BKP0603: -55~+85°C)
	MCF series	-40~+85°C
	CK series	-40~+85°C
	CKS series	
	CKP series	
	LK series	
	HK0603, HK1005	-55~+125°C
	HK1608, HK2125	-40~+85°C
	HKQ0603	-55~+125°C
	AQ105	
	MCOIL™ MC series	-40~+125°C (Including self-generated heat)

2. Storage Temperature Range

Specified Value	BK series	-55~+125°C
	BKH series	
	BKP series	-55~+125°C(BKP0603: -55~+85°C)
	MCF series	-40~+85°C
	CK series	-40~+85°C
	CKS series	
	CKP series	
	LK series	
	HK0603, HK1005	-55~+125°C
	HK1608, HK2125	-40~+85°C
	HKQ0603	-55~+125°C
	AQ105	
	MCOIL™ MC series	-40~+85°C

3. Rated Current

Specified Value	BK series	The temperature of the element is increased within 20°C.
	BKH series	
	BKP series	The temperature of the element is increased within 40°C
	MCF series	Refer to each specification.
	CK series	The temperature of the element is increased within 20°C.
	CKS series	
	CKP series	The temperature of the element is increased within 40°C
	LK series	The decreasing-rate of inductance value is within 5 %
	HK0603, HK1005	The decreasing-rate of inductance value is within 5 %, or the temperature of the element is increased within 20°C
	HK1608, HK2125	
	HKQ0603	
	AQ105	
	MCOIL™ MC series	Idc1: The decreasing-rate of inductance value is within 30 % Idc2: The temperature of the element is increased within 40°C

4. Impedance			
Specified Value	BK series	Refer to each specification.	
	BKH series		
	BKP series		
	MCF series		
Test Methods and Remarks	BK0603 series, BKP0603 series Measuring frequency : 100±1MHz Measuring equipment : 4991A (or its equivalent) Measuring jig : 16193A (or its equivalent), 16197A (or its equivalent)		
	BK(except 0603) series, BKP(except 0603) series Measuring frequency : 100±1MHz Measuring equipment : 4291A (or its equivalent), 4195A (or its equivalent) Measuring jig : 16192A (or its equivalent), HW: 16193A (or its equivalent)		
	BKH series Measuring frequency : 100±1MHz, 1GHz±1MHz Measuring equipment : 4991A (or its equivalent) Measuring jig : 16193A (or its equivalent), 16197A (or its equivalent)		
	MCF series Measuring frequency : 100±1MHz Measuring equipment : 4291A (or its equivalent)		
	5. Inductance		
	Specified Value	CK series	Refer to each specification.

9. Resistance to Flexure of Substrate

Specified Value	BK series	No mechanical damage.
	BKH series	
	BKP series	
	MCF series	
	CK series	
	CKS series	
	CKP series	
	LK series	
	HK0603, HK1005	
	HK1608, HK2125	
	HKQ0603	
	AQ105	
	MCOIL™ MC series	
Test Methods and Remarks	Warp : 2mm (BK series, BKP, BKH1005, CK, CKS, CKP, LK, HK, HKQ0603S, HKQ0603U, AQ series, MCF1210, MC series)	
	Testing board : glass epoxy-resin substrate Thickness : 0.8mm	

10. Solderability

Specified Value	BK series	At least 90% of terminal electrode is covered by new solder.
	BKH series	
	BKP series	
	MCF series	
	CK series	
	CKS series	
	CKP series	
	LK series	
	HK0603, HK1005	
	HK1608, HK2125	
	HKQ0603	
	AQ105	
	MCOIL™ MC series	
Test Methods and Remarks	Solder temperature : 230±5°C (JIS Z 3282 H60A or H63A)	
	Solder temperature : 245±3°C (Sn/3.0Ag/0.5Cu)	
	Duration : 4±1 sec.	

11. Resistance to Soldering

Specified Value	BK series	Appearance: No significant abnormality Impedance change: Within ±30%
	BKH series	
	BKP series	
	MCF series	Appearance: No significant abnormality Impedance change: Within ±20%
	CK series	Appearance: No significant abnormality Inductance change: R10~4R7⇒Within ±10%、6R8~100⇒Within ±15%
	CKS series	Appearance: No significant abnormality Inductance change: Within ±20%
	CKP series	Appearance: No significant abnormality Inductance change: Within ±30%
	LK series	Appearance: No significant abnormality Inductance change: 1005⇒Within ±15% 1608,2125⇒ 47N~4R7: Within ±10% 5R6~330: Within ±15%
	HK0603, HK1005	Appearance: No significant abnormality Inductance change: Within ±5%
	HK1608, HK2125	
	HKQ0603	
	AQ105	Appearance: No significant abnormality Inductance change: Within ±10%
	MCOIL™ MC series	

Test Methods and Remarks	Solder temperature	: 260±5°C
	Duration	: 10±0.5 sec.
	Preheating temperature	: 150 to 180°C
	Preheating time	: 3 min.
	Flux	: Immersion into methanol solution with colophony for 3 to 5 sec.
	Recovery	: 2 to 3 hrs of recovery under the standard condition after the test. (See Note 1)

12. Thermal Shock

Specified Value	BK series	Appearance: No significant abnormality Impedance change: Within ±30%
	BKH series	
	BKP series	
	MCF series	Appearance: No significant abnormality Impedance change: Within ±20%
	CK series	Appearance: No significant abnormality
	CKS series	Inductance change: Within ±20%
	CKP series	Appearance: No significant abnormality Inductance change: Within ±30%
	LK series	Appearance: No significant abnormality Inductance change: Within ±10% Q change: Within ±30%
	HK0603, HK1005	Appearance: No significant abnormality Inductance change: Within ±10% Q change: Within ±20%
	HK1608, HK2125	
	HKQ0603	
	AQ105	
	MCOIL™ MC series	Appearance: No significant abnormality Inductance change: Within ±10%

	MCOIL™ MC series※	Appearance: No significant abnormality Inductance change: Within $\pm 10\%$
Test Methods and Remarks	BK, BKP (except 0603) *, BKH, HK0603, HK1005 *, HKQ, AQ series Temperature : $125\pm 2^\circ\text{C}$ Applied current: Rated current (* BKP series and HK1005 series apply the rated current of 125°C .) Duration : 500 +24/-0 hrs Recovery : 2 to 3 hrs of recovery under the standard condition after the removal from test chamber. (See Note 1)	
	BKP0603, MCF, CK, CKS, CKP, LK, HK1608, HK2125, MCOIL™ MC ** series Temperature : $85\pm 2^\circ\text{C}$ Applied current: Rated current (** MCOIL™ MC series ; I_{dc2max}) Duration : 500 +24/-0 hrs Recovery : 2 to 3 hrs of recovery under the standard condition after the removal from test chamber. (See Note 1)	

(Note 1) Measurement shall be made after 48 ± 2 hrs of recovery under the standard condition.

“standard condition” referred to herein is defined as follows:

5 to 35°C of temperature, 45 to 85% relative humidity.

When there are questions concerning measurement results:

In order to provide correlation data, the test shall be conducted under condition of $20\pm 2^\circ\text{C}$ of temperature, 60 to 70% relative humidity, and 86 to 106kPa of air pressure. Unless otherwise specified, all the tests are conducted under the “standard condition.”

Metal Multilayer Chip Power Inductors (MCOIL™ MC series)

PRECAUTIONS

1. Circuit Design

Precautions

- ◆ Verification of operating environment, electrical rating and performance
 1. A malfunction in medical equipment, spacecraft, nuclear reactors, etc. may cause serious harm to human life or have severe social ramifications. As such, any inductors to be used in such equipment may require higher safety and/or reliability considerations and should be clearly differentiated from components used in general purpose applications.
 2. When inductors are used in places where dew condensation develops and/or where corrosive gas such as hydrogen sulfide, sulfurous acid, or chlorine exists in the air, characteristic deterioration may occur. Please do not use inductors under such environmental conditions.
- ◆ Operating Current (Verification of Rated current)
 1. The operating current including inrush current for inductors must always be lower than their rated values.
 2. Do not apply current in excess of the rated value because the inductance may be reduced due to the magnetic saturation effect.
- ◆ Temperature rise

Temperature rise of power choke coil depends on the installation condition in end products.
Make sure that temperature rise of power choke coils in actual end products is within the specified temperature range.

2. PCB Design

Precautions

- ◆ Pattern configurations (Design of Land-patterns)

When inductors are mounted on a PCB, the size of land patterns and the amount of solder used (size of fillet) can directly affect inductor performance. Therefore, the following items must be carefully considered in the design of solder land patterns:

 - (1) The amount of solder applied can affect the ability of chips to withstand mechanical stresses which may lead to breaking or cracking. Therefore, when designing land-patterns it is necessary to consider the appropriate size and configuration of the solder pads which in turn determines the amount of solder necessary to form the fillets.
 - (2) When more than one part is jointly soldered onto the same land or pad, the pad must be designed so that each component's soldering point is separated by solder-resist.
- ◆ Pattern configurations (Inductor layout on panelized [breakaway] PC boards)

After inductors have been mounted on the boards, chips can be subjected to mechanical stresses in subsequent manufacturing processes (PCB cutting, board inspection, mounting of additional parts, assembly into the chassis, wave soldering the reflow soldered boards etc.) For this reason, planning pattern configurations and the position of SMD inductors should be carefully performed to minimize stress.

Technical considerations

- ◆ Pattern configurations (Design of Land-patterns)

The following diagrams and tables show some examples of recommended patterns to prevent excessive solder amounts. Examples of improper pattern designs are also shown.

- (1) Recommended land dimensions for a typical chip inductor land patterns for PCBs

(Unit: mm)

Type	1005	1210	1608 (Except MCHK)	1608 (MCHK)	2012	2016
A	0.4	0.45	0.45	0.65	0.5	0.7
B	0.5	0.6	1.0	0.6	1.2	0.8
C	0.7	1.15	1.0	1.0	1.45	1.8

- (2) Examples of good and bad solder application

Item	Not recommended	Recommended
Mixed mounting of SMD and leaded components		
Component placement close to the chassis		
Hand-soldering of leaded components near mounted components		

◆Pattern configurations (Inductor layout on panelized[breakaway] PC boards)

1. The following are examples of good and bad inductor layout; SMD inductors should be located to minimize any possible mechanical stresses from board warp or deflection.

Item	Not recommended	Recommended
Deflection of the board		 Position the component at a right angle to the direction of the mechanical stresses that are anticipated.

2. To layout the inductors for the breakaway PC board, it should be noted that the amount of mechanical stresses given will vary depending on inductor layout.

An example below should be counted for better design.

3. When breaking PC boards along their perforations, the amount of mechanical stress on the inductors can vary according to the method used. The following methods are listed in order from least stressful to most stressful: push-back, slit, V-grooving, and perforation. Thus, any ideal SMD inductor layout must also consider the PCB splitting procedure.

3. Considerations for automatic placement

Precautions	◆Adjustment of mounting machine - Excessive impact load should not be imposed on the inductors when mounting onto the PC boards. - The maintenance and inspection of the mouter should be conducted periodically.									
Technical considerations	◆Adjustment of mounting machine - If the lower limit of the pick-up nozzle is low, too much force may be imposed on the inductors, causing damage. To avoid this, the following points should be considered before lowering the pick-up nozzle: - The lower limit of the pick-up nozzle should be adjusted to the surface level of the PC board after correcting for deflection of the board. - The pick-up pressure should be adjusted between 1 and 3N static loads. - To reduce the amount of deflection of the board caused by impact of the pick-up nozzle, supporting pins or back-up pins should be used under the PC board. The following diagrams show some typical examples of good pick-up nozzle placement: <table><tr><th>Item</th><th>Improper method</th><th>Proper method</th></tr><tr><td>Single-sided mounting</td><td></td><td></td></tr><tr><td>Double-sided mounting</td><td></td><td></td></tr></table> - As the alignment pin wears out, adjustment of the nozzle height can cause chipping or cracking of the inductors because of mechanical impact on the inductors. To avoid this, the monitoring of the width between the alignment pin in the stopped position, and maintenance, inspection and replacement of the pin should be conducted periodically.	Item	Improper method	Proper method	Single-sided mounting			Double-sided mounting		
Item	Improper method	Proper method								
Single-sided mounting										
Double-sided mounting										

4. Soldering	
Precautions	◆Reflow soldering - Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified. - The product shall be used reflow soldering only. - Please do not add any stress to a product until it returns in normal temperature after reflow soldering. ◆Lead free soldering - When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently. ◆The conditions for Reworking with soldering irons - Put the soldering iron on the land-pattern and don't touch it to the inductor directly. Soldering iron's temperature below 350 degC , Duration 3 seconds or less
Technical considerations	◆Reflow soldering - If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products. Recommended reflow condition (Pb free solder) The allowable number of reflow soldering is 3 times.
5. Cleaning	
Precautions	◆Cleaning conditions - Washing by supersonic waves shall be avoided.
Technical considerations	◆Cleaning conditions - If washed by supersonic waves, the products might be broken.
6. Resin coating and mold	
Precautions	- With some type of resins a decomposition gas or chemical reaction vapor may remain inside the resin during the hardening period or while left under normal storage conditions resulting in the deterioration of the inductor's performance. - Thermal expansion and thermal shrinkage characteristics of resins may lead to the deterioration of inductors' performance. - When a resin hardening temperature is higher than inductor operating temperature, the stresses generated by the excessive heat may lead to damage in inductors. - In prior to use, please make the reliability evaluation with the product mounted in your application set.
7. Handling	
Precautions	◆Breakaway PC boards (splitting along perforations) - When splitting the PC board after mounting inductors and other components, care is required so as not to give any stresses of deflection or twisting to the board. - Board separation should not be done manually, but by using the appropriate devices. ◆General handling precautions - Always wear static control bands to protect against ESD. - Keep the inductors away from all magnets and magnetic objects. - Use non-magnetic tweezers when handling inductors. - Any devices used with the inductors (soldering irons, measuring instruments) should be properly grounded. - Keep bare hands and metal products (i.e., metal desk) away from inductor electrodes or conductive areas that lead to chip electrodes. - Keep inductors away from items that generate magnetic fields such as speakers or coils. ◆Mechanical considerations Be careful not to subject the inductors to excessive mechanical shocks. - If inductors are dropped on the floor or a hard surface they should not be used. - When handling the mounted boards, be careful that the mounted components do not come in contact with or bump against other boards or components.

8. Storage conditions	
Precautions	◆Storage To maintain the solderability of terminal electrodes and to keep the packaging material in good condition, care must be taken to control temperature and humidity in the storage area. Humidity should especially be kept as low as possible. •Recommended conditions Ambient temperature: 30°C or below Humidity: 70% RH or below The ambient temperature must be kept below 40°C. Even under ideal storage conditions, solderability of inductor is deteriorated as time passes, so inductors should be used within 6 months from the time of delivery. •Inductor should be kept where no chlorine or sulfur exists in the air.
Technical considerations	◆Storage If the parts are stocked in a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/package materials may take place. For this reason, components should be used within 6 months from the time of delivery. If exceeding the above period, please check solderability before using the inductors.

METAL CORE SMD POWER INDUCTORS (MCOIL™ MD SERIES)

RELIABILITY DATA

1. Operating Temperature Range		
Specified Value	MD series	−40~ +125℃
Test Methods and Remarks	Including self-generated heat	
2. Storage Temperature Range		
Specified Value	MD series	−40~ +85℃
Test Methods and Remarks	−5 to 40℃ for the product with taping.	
3. Rated current		
Specified Value	MD series	Within the specified tolerance
4. Inductance		
Specified Value	MD series	Within the specified tolerance
Test Methods and Remarks	Measuring equipment : LCR Meter (HP 4285A or equivalent) Measuring condition : Please see item list.	
5. DC Resistance		
Specified Value	MD series	Within the specified tolerance
Test Methods and Remarks	Measuring equipment : DC ohmmeter (HIOKI 3227 or equivalent)	
6. Self resonance frequency		
Specified Value	MD series	—
7. Temperature characteristic		
Specified Value	MD series	Inductance change : Within ±10%
Test Methods and Remarks	Measurement of inductance shall be taken at temperature range within −40℃~ +125℃. With reference to inductance value at +20℃., change rate shall be calculated.	
8. Resistance to flexure of substrate		
Specified Value	MD series	No damage
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. As illustrated below, apply force in the direction of the arrow indicating until deflection of the test board reaches to 2 mm. Test board size : 100×40×1.0 mm Test board material : Glass epoxy-resin Solder cream thickness : 0.10 mm 	
9. Insulation resistance : between wires		
Specified Value	MD series	—
10. Insulation resistance : between wire and core		
Specified Value	MD series	—
11. Withstanding voltage : between wire and core		
Specified Value	MD series	—

▶ This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification.
 For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (<http://www.ty-top.com/>) .

12. Adhesion of terminal electrode																						
Specified Value		MD series		Shall not come off PC board																		
Test Methods and Remarks		The test samples shall be soldered to the test board by the reflow. Applied force : 10N to X and Y directions. Duration : 5s. Solder cream thickness : 0.10mm.																				
13. Resistance to vibration																						
Specified Value		MD series		Inductance change : Within ±10% No significant abnormality in appearance.																		
Test Methods and Remarks		The test samples shall be soldered to the test board by the reflow. Then it shall be submitted to below test conditions.																				
		<table><tr><td>Frequency Range</td><td colspan="3">10~55Hz</td></tr><tr><td>Total Amplitude</td><td colspan="3">1.5mm (May not exceed acceleration 196m/s²)</td></tr><tr><td>Sweeping Method</td><td colspan="3">10Hz to 55Hz to 10Hz for 1min.</td></tr><tr><td rowspan="3">Time</td><td>X</td><td colspan="2" rowspan="3">For 2 hours on each X, Y, and Z axis.</td></tr><tr><td>Y</td></tr><tr><td>Z</td></tr></table>			Frequency Range	10~55Hz			Total Amplitude	1.5mm (May not exceed acceleration 196m/s ²)			Sweeping Method	10Hz to 55Hz to 10Hz for 1min.			Time	X	For 2 hours on each X, Y, and Z axis.		Y	Z
Frequency Range	10~55Hz																					
Total Amplitude	1.5mm (May not exceed acceleration 196m/s ²)																					
Sweeping Method	10Hz to 55Hz to 10Hz for 1min.																					
Time	X	For 2 hours on each X, Y, and Z axis.																				
	Y																					
	Z																					
		Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.																				
14. Solderability																						
Specified Value		MD series		At least 90% of surface of terminal electrode is covered by new solder.																		
Test Methods and Remarks		The test samples shall be dipped in flux, and then immersed in molten solder as shown in below table. Flux : Methanol solution containing rosin 25%.																				
		<table><tr><td>Solder Temperature</td><td colspan="3">245±5℃</td></tr><tr><td>Time</td><td colspan="3">5±1.0 sec.</td></tr></table>			Solder Temperature	245±5℃			Time	5±1.0 sec.												
Solder Temperature	245±5℃																					
Time	5±1.0 sec.																					
		※Immersion depth : All sides of mounting terminal shall be immersed.																				
15. Resistance to soldering heat																						
Specified Value		MD series		Inductance change : Within ±10% No significant abnormality in appearance.																		
Test Methods and Remarks		The test sample shall be exposed to reflow oven at 230±5℃ for 40 seconds, with peak temperature at 260±5℃ for 5 seconds, 2 times. Test board material : Glass epoxy-resin Test board thickness : 1.0mm																				
16. Thermal shock																						
Specified Value		MD series		Inductance change : Within ±10% No significant abnormality in appearance.																		
Test Methods and Remarks		The test samples shall be soldered to the test board by the reflow. The test samples shall be placed at specified temperature for specified time by step 1 to step 4 as shown in below table in sequence. The temperature cycle shall be repeated 100 cycles.																				
		<table><tr><td colspan="3">Conditions of 1 cycle</td></tr><tr><td>Step</td><td>Temperature (℃)</td><td>Duration (min)</td></tr><tr><td>1</td><td>−40±3</td><td>30±3</td></tr><tr><td>2</td><td>Room temperature</td><td>Within 3</td></tr><tr><td>3</td><td>+85±2</td><td>30±3</td></tr><tr><td>4</td><td>Room temperature</td><td>Within 3</td></tr></table>			Conditions of 1 cycle			Step	Temperature (℃)	Duration (min)	1	−40±3	30±3	2	Room temperature	Within 3	3	+85±2	30±3	4	Room temperature	Within 3
Conditions of 1 cycle																						
Step	Temperature (℃)	Duration (min)																				
1	−40±3	30±3																				
2	Room temperature	Within 3																				
3	+85±2	30±3																				
4	Room temperature	Within 3																				
17. Damp heat																						
Specified Value		MD series		Inductance change : Within ±10% No significant abnormality in appearance.																		
Test Methods and Remarks		The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table.																				
		<table><tr><td>Temperature</td><td>60±2℃</td></tr><tr><td>Humidity</td><td>90~95%RH</td></tr><tr><td>Time</td><td>500+24/−0 hour</td></tr></table>			Temperature	60±2℃	Humidity	90~95%RH	Time	500+24/−0 hour												
Temperature	60±2℃																					
Humidity	90~95%RH																					
Time	500+24/−0 hour																					

18. Loading under damp heat		
Specified Value	MD series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity and applied the rated current continuously as shown in below table.	
	Temperature	$60 \pm 2^{\circ}\text{C}$
	Humidity	$90 \sim 95\% \text{RH}$
	Applied current	Rated current
	Time	$500 + 24 / - 0$ hour
19. Low temperature life test		
Specified Value	MD series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.	
	Temperature	$-40 \pm 2^{\circ}\text{C}$
	Time	$500 + 24 / - 0$ hour
20. High temperature life test		
Specified Value	MD series	—
21. Loading at high temperature life test		
Specified Value	MD series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and applied the rated current continuously as shown in below table.	
	Temperature	$85 \pm 2^{\circ}\text{C}$
	Applied current	Rated current
	Time	$500 + 24 / - 0$ hour
22. Standard condition		
Specified Value	MD series	Standard test condition : Unless otherwise specified, temperature is $20 \pm 15^{\circ}\text{C}$ and $65 \pm 20\%$ of relative humidity. When there is any question concerning measurement result: In order to provide correlation data, the test shall be condition of $20 \pm 2^{\circ}\text{C}$ of temperature, $65 \pm 5\%$ relative humidity. Inductance is in accordance with our measured value.

METAL CORE SMD POWER INDUCTORS (MCOIL™ MD SERIES)

■ PRECAUTIONS

1. Circuit Design	
Precautions	◆Operating environment The products described in this specification are intended for use in general electronic equipment,(office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.
2. PCB Design	
Precautions	◆Land pattern design Please refer to a recommended land pattern.
Technical considerations	◆Land pattern design Surface Mounting - Mounting and soldering conditions should be checked beforehand. - Applicable soldering process to this products is reflow soldering only.
3. Considerations for automatic placement	
Precautions	◆Adjustment of mounting machine - Excessive impact load should not be imposed on the products when mounting onto the PC boards. - Mounting and soldering conditions should be checked beforehand.
Technical considerations	◆Adjustment of mounting machine When installing products, care should be taken not to apply distortion stress as it may deform the products.
4. Soldering	
Precautions	◆Reflow soldering - Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified. - The product shall be used reflow soldering only. - Please do not add any stress to a product until it returns in normal temperature after reflow soldering. ◆Lead free soldering - When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently. ◆Recommended conditions for using a soldering iron (NR10050 Type) - Put the soldering iron on the land-pattern. - Soldering iron's temperature – Below 350°C - Duration – 3 seconds or less - The soldering iron should not directly touch the inductor.
Technical considerations	◆Reflow soldering If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products. •NR30/40/50/60/80, NRV20/30, NRH24/30, NRS20/40/50/60/80 Type, NR10050 Type, NS101/125 Type Recommended reflow condition (Pb free solder) Temperature [°C] Heating Time [sec] 150~180 90±30sec 30±10sec 230°C min 5sec max Peak: 250+5/-0°C
5. Cleaning	
Precautions	◆Cleaning conditions Washing by supersonic waves shall be avoided.
Technical considerations	◆Cleaning conditions If washed by supersonic waves, the products might be broken.

6. Handling	
Precautions	◆Handling 1. Keep the product away from all magnets and magnetic objects. ◆Breakaway PC boards (splitting along perforations) 1. When splitting the PC board after mounting product, care should be taken not to give any stresses of deflection or twisting to the board. 2. Board separation should not be done manually, but by using the appropriate devices. ◆Mechanical considerations 1. Please do not give the product any excessive mechanical shocks. 2. Please do not add any shock and power to a product in transportation. ◆Pick-up pressure 1. Please do not push to add any pressure to a winding part. Please do not give any shock and push into a ferrite core exposure part. ◆Packing 1. Please avoid accumulation of a packing box as much as possible. ◆Board mounting 1. There shall be no pattern or via between terminals at the bottom of product. 2. Components which are located in peripheral of product shall not make contact with surface (top, side) of product.
Technical considerations	◆Handling 1. There is a case that a characteristic varies with magnetic influence. ◆Breakaway PC boards (splitting along perforations) 1. The position of the product on PCBs shall be carefully considered to minimize the stress caused from splitting of the PCBs. ◆Mechanical considerations 1. There is a case to be damaged by a mechanical shock. 2. There is a case to be broken by the handling in transportation. ◆Pick-up pressure 1. Damage and a characteristic can vary with an excessive shock or stress. ◆Packing 1. If packing boxes are accumulated, that could cause a deformation on packing tapes or a damage on the products. ◆Board mounting 1. If there is pattern or via between terminals at the bottom of product, it may cause characteristics change. 2. If components which are located in peripheral of product make contact with surface (top, side) of product, it may cause damage or characteristics change.
7. Storage conditions	
Precautions	◆Storage 1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled. ▪ Recommended conditions - Ambient temperature : $-5\sim 40^{\circ}\text{C}$ - Humidity : Below 70% RH ▪ The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes. For this reason, product should be used within 6 months from the time of delivery. In case of storage over 6 months, solderability shall be checked before actual usage.
Technical considerations	◆Storage 1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.

⑥ Top Tape Strength

The top The top tape requires a peel-off force of 0.1 to 1.2N in the direction of the arrow as illustrated below.

METAL CORE WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ MA SERIES / MCOIL™ MA-H SERIES)

RELIABILITY DATA

1. Operating Temperature Range		
Specified Value	MA series	−40~ +105℃
	MA-H series	−40~ +125℃
Test Methods and Remarks	Including self-generated heat	
2. Storage Temperature Range		
Specified Value	MA series	−40~ +85℃
	MA-H series	
Test Methods and Remarks	0 to 40℃ for the product with taping.	
3. Rated current		
Specified Value	MA series	Within the specified tolerance
	MA-H series	
4. Inductance		
Specified Value	MA series	Within the specified tolerance
	MA-H series	
Test Methods and Remarks	Measuring equipment : LCR Meter (HP 4285A or equivalent) Measuring frequency : 2MHz、1V	
5. DC Resistance		
Specified Value	MA series	Within the specified tolerance
	MA-H series	
Test Methods and Remarks	Measuring equipment : DC ohmmeter (HIOKI 3227 or equivalent)	
6. Self resonance frequency		
Specified Value	MA series	—
	MA-H series	
7. Temperature characteristic		
Specified Value	MA series	Inductance change : Within ±15%
	MA-H series	
Test Methods and Remarks	Measurement of inductance shall be taken at temperature range within −40℃~ +85℃. With reference to inductance value at +20℃., change rate shall be calculated.	
8. Resistance to flexure of substrate		
Specified Value	MA series	No damage
	MA-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. As illustrated below, apply force in the direction of the arrow indicating until deflection of the test board reaches to 2 mm. Test board size : 100×40×1.0 mm Test board material : Glass epoxy-resin Solder cream thickness : 0.12 mm 	

▶ This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification.
 For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (<http://www.ty-top.com/>).

9. Insulation resistance : between wires				
Specified Value	MA series	—		
	MA-H series			
10. Insulation resistance : between wire and core				
Specified Value	MA series	—		
	MA-H series			
11. Withstanding voltage : between wire and core				
Specified Value	MA series	—		
	MA-H series			
12. Adhesion of terminal electrode				
Specified Value	MA series	No abnormality.		
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. Applied force : 10N to X and Y directions. Duration : 5s. Solder cream thickness : 0.12mm.			
13. Resistance to vibration				
Specified Value	MA series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.		
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. Then it shall be submitted to below test conditions.			
	Frequency Range	10~55Hz		
	Total Amplitude	1.5mm (May not exceed acceleration 196m/s ²)		
	Sweeping Method	10Hz to 55Hz to 10Hz for 1min.		
	Time	X	For 2 hours on each X, Y, and Z axis.	
		Y		
		Z		
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.				
14. Solderability				
Specified Value	MA series	At least 90% of surface of terminal electrode is covered by new solder.		
	MA-H series			
Test Methods and Remarks	The test samples shall be dipped in flux, and then immersed in molten solder as shown in below table.			
	Flux : Methanol solution containing rosin 25%.			
	Solder Temperature	245±5℃		
	Time	5±0.5 sec.		
※Immersion depth : All sides of mounting terminal shall be immersed.				
15. Resistance to soldering heat				
Specified Value	MA series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.		
	MA-H series			
Test Methods and Remarks	The test sample shall be exposed to reflow oven at 230℃ for 40 seconds, with peak temperature at 260+0/—5℃ for 5 seconds, 3 times.			
	Test board material : Glass epoxy-resin			
	Test board thickness : 1.0mm			
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			

16. Thermal shock				
Specified Value	MA series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. The test samples shall be placed at specified temperature for specified time by step 1 to step 4 as shown in below table in sequence. The temperature cycle shall be repeated 100 cycles.			
	Conditions of 1 cycle			
	Step	Temperature ($^{\circ}\text{C}$)	Duration (min)	
	1	-40 ± 3	30 ± 3	
	2	Room temperature	Within 3	
	3	$+85\pm 2$	30 ± 3	
	4	Room temperature	Within 3	
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.				
17. Damp heat				
Specified Value	MA series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow.			
	The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table.			
	Temperature	$60\pm 2^{\circ}\text{C}$		
	Humidity	$90\sim 95\%\text{RH}$		
	Time	$500+24/-0$ hour		
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
18. Loading under damp heat				
Specified Value	MA series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow.			
	The test samples shall be placed in thermostatic oven set at specified temperature and humidity and applied the rated current continuously as shown in below table.			
	Temperature	$60\pm 2^{\circ}\text{C}$		
	Humidity	$90\sim 95\%\text{RH}$		
	Applied current	Rated current		
	Time	$500+24/-0$ hour		
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
19. Low temperature life test				
Specified Value	MA series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.			
	Temperature	$-40\pm 2^{\circ}\text{C}$		
	Time	$500+24/-0$ hour		
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
20. High temperature life test				
Specified Value	MA series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MA-H series			
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.			
	Temperature	$85\pm 2^{\circ}\text{C}$		
	Time	$500+24/-0$ hour		
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			
21. Loading at high temperature life test				
Specified Value	MA series		—	
	MA-H series			

22. Standard condition		
Specified Value	MA series	Standard test condition : Unless otherwise specified, temperature is $20 \pm 15^{\circ}\text{C}$ and $65 \pm 20\%$ of relative humidity. When there is any question concerning measurement result: In order to provide correlation data, the test shall be condition of $20 \pm 2^{\circ}\text{C}$ of temperature, $65 \pm 5\%$ relative humidity. Inductance is in accordance with our measured value.
	MA-H series	

METAL CORE WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ MA SERIES / MCOIL™ MA-H SERIES)

■ PRECAUTIONS

1. Circuit Design

Precautions	◆Operating environment 1. The products described in this specification are intended for use in general electronic equipment,(office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.
-------------	--

2. PCB Design

Precautions	◆Land pattern design 1. Please refer to a recommended land pattern.
Technical considerations	◆Land pattern design Surface Mounting • Mounting and soldering conditions should be checked beforehand. • Applicable soldering process to this products is reflow soldering only.

3. Considerations for automatic placement

Precautions	◆Adjustment of mounting machine 1. Excessive impact load should not be imposed on the products when mounting onto the PC boards. 2. Mounting and soldering conditions should be checked beforehand.
Technical considerations	◆Adjustment of mounting machine 1. When installing products, care should be taken not to apply distortion stress as it may deform the products.

4. Soldering

Precautions	◆Reflow soldering 1. Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified. 2. The product shall be used reflow soldering only. 3. Please do not add any stress to a product until it returns in normal temperature after reflow soldering. ◆Lead free soldering 1. When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently.
Technical considerations	◆Reflow soldering 1. If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products. Recommended reflow condition (Pb free solder) Temperature [°C] Heating Time [sec] 150~180 90±30sec 40sec max 230°C min 5sec max Peak: 260+0/-5°C

5. Cleaning

Precautions	◆Cleaning conditions 1. Washing by supersonic waves shall be avoided.
Technical considerations	◆Cleaning conditions 1. If washed by supersonic waves, the products might be broken.

6. Handling	
Precautions	◆Handling 1. Keep the product away from all magnets and magnetic objects. ◆Breakaway PC boards (splitting along perforations) 1. When splitting the PC board after mounting product, care should be taken not to give any stresses of deflection or twisting to the board. 2. Board separation should not be done manually, but by using the appropriate devices. ◆Mechanical considerations 1. Please do not give the product any excessive mechanical shocks. 2. Please do not add any shock and power to a product in transportation. ◆Pick-up pressure 1. Please do not push to add any pressure to a winding part. Please do not give any shock and push into a ferrite core exposure part. ◆Packing 1. Please avoid accumulation of a packing box as much as possible.
Technical considerations	◆Handling 1. There is a case that a characteristic varies with magnetic influence. ◆Breakaway PC boards (splitting along perforations) 1. The position of the product on PCBs shall be carefully considered to minimize the stress caused from splitting of the PCBs. ◆Mechanical considerations 1. There is a case to be damaged by a mechanical shock. 2. There is a case to be broken by the handling in transportation. ◆Pick-up pressure 1. Damage and a characteristic can vary with an excessive shock or stress. ◆Packing 1. If packing boxes are accumulated, that could cause a deformation on packing tapes or a damage on the products.
7. Storage conditions	
Precautions	◆Storage 1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled. ▪ Recommended conditions - Ambient temperature : 0~40°C - Humidity : Below 70% RH ▪ The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes. For this reason, product should be used within 6 months from the time of delivery. In case of storage over 6 months, solderability shall be checked before actual usage.
Technical considerations	◆Storage 1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.

Unit : mm (inch)

④Leader and Blank portion

► This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (<http://www.tv-top.com/>).

⑤ Reel size

Type	Reel size (Reference values)		
	ϕD	ϕd	W
MBKK1608/MBKK1608H	180+0/-3 (7.087+0/-0.118)	60+1/-0 (2.36+0.039/0)	10.0±1.5 (0.394±0.059)
MBKK2012			
MBMK2520/MBMK2520H			

Unit: mm (inch)

⑥ Top Tape Strength

The top tape requires a peel-off force of 0.2 to 0.7N in the direction of the arrow as illustrated below.

METAL WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ MB SERIES/MCOIL™ MB-H SERIES)

RELIABILITY DATA

1. Operating Temperature Range		
Specified Value	MB series	−40~ +105℃
	MB-H series	−40~ +125℃
Test Methods and Remarks	Including self-generated heat	
2. Storage Temperature Range		
Specified Value	MB series	−40~ +85℃
	MB-H series	
Test Methods and Remarks	0 to 40℃ for the product with taping.	
3. Rated current		
Specified Value	MB series	Within the specified tolerance
	MB-H series	
4. Inductance		
Specified Value	MB series	Within the specified tolerance
	MB-H series	
Test Methods and Remarks	Measuring equipment : LCR Meter (HP 4285A or equivalent) Measuring frequency : 1MHz、1V	
5. DC Resistance		
Specified Value	MB series	Within the specified tolerance
	MB-H series	
Test Methods and Remarks	Measuring equipment : DC ohmmeter (HIOKI 3227 or equivalent)	
6. Self resonance frequency		
Specified Value	MB series	—
	MB-H series	
7. Temperature characteristic		
Specified Value	MB series	Inductance change : Within ±15%
	MB-H series	
Test Methods and Remarks	MB series : Measurement of inductance shall be taken at temperature range within −40℃~ +105℃. With reference to inductance value at +20℃., change rate shall be calculated.	
	MB-H series : Measurement of inductance shall be taken at temperature range within −40℃~ +125℃. With reference to inductance value at +20℃., change rate shall be calculated.	

8. Resistance to flexure of substrate		
Specified Value	MB series	No damage
	MB-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. As illustrated below, apply force in the direction of the arrow indicating until deflection of the test board reaches to 2 mm.	
	Test board size : 100 × 40 × 1.0 mm (1608:0.8mm) Test board material : Glass epoxy-resin Solder cream thickness : 0.1 mm 	

9. Insulation resistance : between wires		
Specified Value	MB series	—
	MB-H series	

10. Insulation resistance : between wire and core		
Specified Value	MB series	DC25V 100k Ω min
	MB-H series	DC50V 100k Ω min

11. Withstanding voltage : between wire and core		
Specified Value	MB series	—
	MB-H series	

12. Adhesion of terminal electrode		
Specified Value	MB series	No abnormality.
	MB-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. Applied force : 10N (1608:5N) to X and Y directions. Duration : 5s. Solder cream thickness : 0.1mm.	

13. Resistance to vibration			
Specified Value	MB series		Inductance change : Within ±10% No significant abnormality in appearance.
	MB-H series		
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow.		
	Then it shall be submitted to below test conditions.		
	Frequency Range	10~55Hz	
	Total Amplitude	1.5mm (May not exceed acceleration 196m/s²)	
	Sweeping Method	10Hz to 55Hz to 10Hz for 1min.	
	Time	X	For 2 hours on each X, Y, and Z axis.
		Y	
		Z	
Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.			

14. Solderability		
Specified Value	MB series	At least 90% of surface of terminal electrode is covered by new solder.
	MB-H series	
Test Methods and Remarks	The test samples shall be dipped in flux, and then immersed in molten solder as shown in below table.	
	Flux : Methanol solution containing rosin 25%.	
	Solder Temperature	245±5°C
	Immersing speed	25mm/s
	Time	5±0.5 sec.
	※Immersion depth : All sides of mounting terminal shall be immersed.	

15. Resistance to soldering heat		
Specified Value	MB series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
	MB-H series	
Test Methods and Remarks	The test sample shall be exposed to reflow oven at 230℃ for 40 seconds, with peak temperature at 260+0/−5℃ for 5 seconds, 3 times. Test board material : Glass epoxy-resin Test board thickness : 1.0mm Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.	

16. Thermal shock																																						
Specified Value	MB series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.																																				
	MB-H series																																					
Test Methods and Remarks	MB series: The test samples shall be soldered to the test board by the reflow. The test samples shall be placed at specified temperature for specified time by step 1 to step 4 as shown in below table in sequence. The temperature cycle shall be repeated 100 cycles. <table border="1"> <thead> <tr> <th colspan="3">Conditions of 1 cycle</th></tr> <tr> <th>Step</th><th>Temperature ($^{\circ}\text{C}$)</th><th>Duration (min)</th></tr> </thead> <tbody> <tr> <td>1</td><td>-40 ± 3</td><td>30 ± 3</td></tr> <tr> <td>2</td><td>Room temperature</td><td>Within 3</td></tr> <tr> <td>3</td><td>$+85\pm 2$</td><td>30 ± 3</td></tr> <tr> <td>4</td><td>Room temperature</td><td>Within 3</td></tr> </tbody> </table> Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs. 17. Damp heat				
Specified Value	MB series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MB-H series			
Test Methods and Remarks	MB series: The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table.		MB-H series: The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table.	
	Temperature	60 $\pm$ 2℃	Temperature	85 $\pm$ 2℃
	Humidity	90 $\sim$ 95%RH	Humidity	85%RH
	Time	1000+24/—0 hour	Time	1000+24/—0 hour
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.		Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.	

18. Loading under damp heat				
Specified Value	MB series		Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.	
	MB-H series			
Test Methods and Remarks	MB series: The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity and applied the rated current continuously as shown in below table.		MB-H series: The test samples shall be soldered to the test board by the reflow. The test samples shall be placed in thermostatic oven set at specified temperature and humidity and applied the rated current continuously as shown in below table.	
	Temperature	60±2℃	Temperature	85±2℃
	Humidity	90~95%RH	Humidity	85%RH
	Applied current	Rated current	Applied current	Rated current
	Time	1000+24/—0 hour	Time	1000+24/—0 hour
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.		Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.	

19. Low temperature life test		
Specified Value	MB series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
	MB-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.	
	Temperature	$-40\pm 2^{\circ}\text{C}$
	Time	1000+24/−0 hour
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.	

20. High temperature life test		
Specified Value	MB series	Inductance change : Within $\pm 10\%$ No significant abnormality in appearance.
	MB-H series	
Test Methods and Remarks	The test samples shall be soldered to the test board by the reflow. After that, the test samples shall be placed at test conditions as shown in below table.	
	Temperature	$85 \pm 2^{\circ}\text{C}$
	Time	$1000 + 24 / - 0$ hour
	Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.	

21. Loading at high temperature life test		
Specified Value	MB series	—
	MB-H series	

22. Standard condition		
Specified Value	MB series	Standard test condition : Unless otherwise specified, temperature is $20 \pm 15^{\circ}\text{C}$ and $65 \pm 20\%$ of relative humidity. When there is any question concerning measurement result: In order to provide correlation data, the test shall be condition of $20 \pm 2^{\circ}\text{C}$ of temperature, $65 \pm 5\%$ relative humidity. Inductance is in accordance with our measured value.
	MB-H series	

METAL WIRE-WOUND CHIP POWER INDUCTORS

(MCOIL™ MB SERIES/MCOIL™ MB-H SERIES)

■ PRECAUTIONS

1. Circuit Design	
Precautions	◆Operating environment 1. The products described in this specification are intended for use in general electronic equipment,(office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.
2. PCB Design	
Precautions	◆Land pattern design 1. Please refer to a recommended land pattern.
Technical considerations	◆Land pattern design Surface Mounting • Mounting and soldering conditions should be checked beforehand. • Applicable soldering process to this products is reflow soldering only.
3. Considerations for automatic placement	
Precautions	◆Adjustment of mounting machine 1. Excessive impact load should not be imposed on the products when mounting onto the PC boards. 2. Mounting and soldering conditions should be checked beforehand.
Technical considerations	◆Adjustment of mounting machine 1. When installing products, care should be taken not to apply distortion stress as it may deform the products.
4. Soldering	
Precautions	◆Reflow soldering 1. Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified. 2. The product shall be used reflow soldering only. 3. Please do not add any stress to a product until it returns in normal temperature after reflow soldering. ◆Lead free soldering 1. When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently.
Technical considerations	◆Reflow soldering 1. If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products. Recommended reflow condition (Pb free solder) Temperature [°C] Heating Time [sec] 150~180 90±30sec 40sec max 230°C min 5sec max Peak: 260+0/-5°C
5. Cleaning	
Precautions	◆Cleaning conditions 1. Washing by supersonic waves shall be avoided.
Technical considerations	◆Cleaning conditions 1. If washed by supersonic waves, the products might be broken.

6. Handling	
Precautions	◆Handling 1. Keep the product away from all magnets and magnetic objects. ◆Breakaway PC boards (splitting along perforations) 1. When splitting the PC board after mounting product, care should be taken not to give any stresses of deflection or twisting to the board. 2. Board separation should not be done manually, but by using the appropriate devices. ◆Mechanical considerations 1. Please do not give the product any excessive mechanical shocks. 2. Please do not add any shock and power to a product in transportation. ◆Pick-up pressure 1. Please do not push to add any pressure to a winding part. Please do not give any shock and push into a ferrite core exposure part. ◆Packing 1. Please avoid accumulation of a packing box as much as possible.
Technical considerations	◆Handling 1. There is a case that a characteristic varies with magnetic influence. ◆Breakaway PC boards (splitting along perforations) 1. The position of the product on PCBs shall be carefully considered to minimize the stress caused from splitting of the PCBs. ◆Mechanical considerations 1. There is a case to be damaged by a mechanical shock. 2. There is a case to be broken by the handling in transportation. ◆Pick-up pressure 1. Damage and a characteristic can vary with an excessive shock or stress. ◆Packing 1. If packing boxes are accumulated, that could cause a deformation on packing tapes or a damage on the products.
7. Storage conditions	
Precautions	◆Storage 1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled. ▪ Recommended conditions Ambient temperature : 0~40°C Humidity : Below 70% RH ▪ The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes. For this reason, product should be used within 6 months from the time of delivery. In case of storage over 6 months, solderability shall be checked before actual usage.
Technical considerations	◆Storage 1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.
