The EHEIM feedingSTATION serves your fish's meals underwater, at a fixed location. ... EHEIM TWINfeeder If you don’t always have time an automatic fish feeder is ideal.... Packing dimensions (Width): Packing dimensions (Height): Packing dimensions (Depth): Description Downloads FAQ 1 Reviews 0 EHEIM autofeeder If you don’t always have time an automatic fish feeder is ideal. Also when... more EHEIM autofeeder If you don’t always have time an automatic fish feeder is ideal. Also when on holiday. You can easily programme the feeding times as well as the amount of food and the fish feeder ventilates the food at precisely the correct doing time into the water. With a simple press of a button “snacks” are also possible at any time. The function keys are splash proof .A warning system quickly shows low battery level. And of course the feeders fit feeder openings on the VARILUX aquarium hoods; they are also equipped with a bracket for open-top aquariums and terrariums – also for nano aquariums. EHEIM automatic fish feeder Compact equipment with a feeding chamber; mainly for flake food Easy to understand programming An additional programme for double feeding Actively aerated food chamber Capacity ca. 100 ml Additional “snacks“ possible at the touch of a button Function keys are splash resistant Warning system quickly indicates low battery level Including bracket for mounting on an open-top aquarium or terrarium Includes batteries Fragen und Antworten More You will find the most frequently asked questions and the corresponding answers to this article, here. Frage: Warum kann ich bei meinem Futterautomat 3581 keine Akkus verwenden? Antwort: Akkus haben im Gegensatz zu Batterien (Nennspannung 1,5 V) nur eine Nennspannung von 1,2 V. Daher funktionieren batteriebetriebene Geräte, die nicht speziell für Akkus ausgelegt sind, entweder nur mit eingeschränkter Leistung (z. B. Schlammabsauger) oder nur sehr kurze Zeit (z. B. Futterautomat). Hinzu kommt noch eine, teilweise sehr, hohe Selbstentladung. Aufgrund dieser Selbstentladung, müssten Akkus die nicht ständig in Gebrauch sind, vor jeder Verwendung zuerst aufgeladen werden. Um einen sicheren Futterbetrieb zu gewährleisten, ist eine Betriebsspannung von min. 2,5 V notwendig. (Bei neuen Batterien beträgt die Betriebsspannung 3 V (2 x 1,5 V)). Unterhalb der Schwellenspannung von 2,5 V ist keine Drehung der Futtertrommel mehr möglich. Hierdurch wird verhindert, dass die Trommel z.B. mit der Öffnung nach unten stehenbleibt. Da Akkus nur eine Betriebsspannung von 2,4 V liefern können, ist diese Schwelle von 2,5 V schon beim Einsetzen von frisch aufgeladenen Akkus unterschritten. Im besten Fall läuft der Futterautomat dann noch einige Tage und zeigt dann trotz voller Akkus das Symbol „LO“ für einen notwendigen Batteriewechsel an. Die Fütterungen werden dann kurze Zeit später gestoppt. Read, write and discuss reviews... more Owing to the constant requests for automatic fish feeder operation instruction, we have decided to how a couple if videos so that it is easier for you to set up your automatic fish feeder. Your comment on this question: Your comment on this answer: report this ad While pet fish are relatively low maintenance, maintaining a proper feeding schedule and feeding the correct amounts can be a challenge, especially if you have unusual work hours or travel frequently. Getting an automatic feeder, such as the EHEIM Autofeeder, which can be used with both freshwater and saltwater tanks, can solve this problem, and you can easily follow the instructions in the EHEIM everyday fish feeder manual to set it up. This removes the hassle and ensures that your fish are neither underfed nor overfed. An automatic fish feeder can help on travel days. EHEIM fish feeder instructions When you first remove your EHEIM Autofeeder from the box, you will need to install two AA batteries to power the feeder. Do not use rechargeable batteries. Check your autofeeder regularly when you refill the food to make sure the batteries are still good. You will see "LO" on the display when the batteries are running low and need to be replaced. You will not lose any of the EHEIM fish feeder programmings if you remove and replace the batteries within one minute. Position the feeder on the cover by the feed opening so that the food dispensed from the feeder will fall onto the water. If you don't have a cover, use Velcro tape or a bracket to secure the feeder to the edge of the tank. You can manually dispense food by pressing the "EHEIM" button on the feeder, or you can program the unit to dispense food automatically. EHEIM fish feeder programming With the EHEIM Autofeeder, you can program up to four automatic feeding times. Use the "Mode" button to switch between the current time and feeding times one to four. Start by setting the current time. Click the "Set" button and the hours of the time will flash. Use the plus key to set the hour of the day. Then, click "Mode" to switch to minutes. Again, use the plus key to set the minutes. When the current time is correct, press "Set" again to store the time. Then, press "Mode" to switch to feeding time one. Use the same process to set the time of the first feeding. After setting the minutes, press "Mode" again to select the feeding option. Use the plus sign to select one or two arrows. One arrow will dispense one serving of food. Two arrows will dispense two servings. If no arrows are displayed, no food will be dispensed. Finally, store the feeding time by pressing "Set." Repeat this for feeding times two through four if desired. Once you have programmed the desired feeding times, you need to add food to the feeder and adjust how much is dispensed in each serving. Press the button that connects the food storage container to the feeder to release the container. Make sure the container is clean and dry and then fill it with fish food. It will hold up to 100 milliliters of food. Secure the filled container to the feeder. Next, adjust the slide on the container. A larger gap will release more food, and a smaller gap will release less food. At the programmed times, the container rotates in a circle, dropping a portion of food into the water. You may need a bit of trial and error when you first set up the feeder to determine the best slide position to feed the appropriate amount to your fish.
