Deebot dn622 instruction manual

The Deebot N79 is aimed towards low-pile carpeting and solid wood surface flooring and does a reasonably good job of daily cleaning on those floors. Deebot N79 is a good robotic vacuum for the price.When used in the right way, it has a sufficient battery charge to clean a large room without pause. Like most robotic vacuums, the Deebot N79 will get stuck on some things, like not charging, spinning in circles, Wi-Fi won't connect, bumper exception, etc.Deebot N79 Troubleshooting and maintaining is fairly simple. You probably do not know how to reset Deebot n79 and you should be aware of your Deebot N79 malfunctioning.I will describe the above issues, hope you will be benefited.DEEBOT N79 not chargingPossible Cause: On the bottom side of DEEBOT N79 has a Side-Power Switch, that is not turned ON.Solution: Turn the robot's Side Power Switch to the ON position. You have to know "l" indicates ON and "O" indicates OFF. DEEBOT is powered goes ON when Power Indicator light glows a continuous BLUE.Possible Cause: Maybe, DEEBOT N79 did not connect to the charging dock. You probably do not know, Check the facts.Place the Charging Dock on a level floor surface against the wall with the base vertical to the ground. Keep the immediate area 2m in front of the charger and 1 m on both sides of the charger clear of objects and reflective surfaces.Solution: Confirm that DEEBOT N79 has made a connection with the Charging Dock Pins. If necessary, you can remove the robot yourself to connect.Possible Cause: Maybe Charging Dock is unplugged while the robot's Bottom Power Switch is ON, which causes battery drain.Solution: Ensure the robot's side Bottom Power Switch is turned ON when Plugged in the Charging Dock. Your DEEBOT N79 Keep on the Charging Dock to make sure it has a full battery charge to work at any time as needed.Possible Cause: The battery is fully discharged.Solution: Replace and re-activate the battery. Manually by hand Place your DEEBOT N79 on the Charging Dock, disconnect after 3 minutes charging, repeat this process 3 times; then charge normally.Deebot N79 WI-FI won't connectThe user device is not able to connect to the mobile Wi-FiPlease check the Wi-Fi settings. The robot only supports 2.4G Wi-Fi but does not support 5G Wi-Fi and enterprise networks.Place the robot towards the router where the wireless signal strength is powerful.Check if the phone is linked to the Wi-Fi and the Wi-Fi can communicate the internet normally.Check if the Wi-Fi credentials are correct.Do not minimize the background in the App when the network is going connect.Disconnect other additional user devices from the mobile Wi-Fi, mainly for Peer-to-Peer (P2P) Network downloads and online videos when connecting the robot.Try to restart the router and the phone to connect the internet network again.If it still does not work, break it down! Oh no, don't take it seriously. please contact a technician.If a user's router set a 2.4G and 5G Wi-Fi at the same time, set the two frequencies for different SSID.Considering the Wi-Fi connectivity, we should bet on this best robot vacuum for carpet suggestions that had multiple sensors to drive in the right way and adjust automatically.The robot goes around in circlesPossible Causes: On the bottom of the robot has an Anti-Drop-sensors which are covered with dust.Solutions: Use the given Multi-Function Cleaning Tool to rub out Anti-Drop sensors.Possible Causes: Driving Wheels are tangled with foreign matter.Solutions: Use the provided Multi-Function Cleaning Tool to wipe Anti-Drop sensors. Possible Causes: The robot may not be able to detect objects properly.Solutions: Use the provided Multi-Function Cleaning Tool to deface Anti-Drop sensors. Clean external matter from Driving Wheels.Deebot N79 malfunctionPlease use this chart to troubleshoot every problem using DEEBOT.Sl.MalfunctionPossible CausesSolutions1DEEBOT not chargingDEEBOT is powered offPress down and keep hold AUTO Mode Button on DEEBOT to power ONDEEBOT failed to establish a connection with the Charging DockMake sure that DEEBOT's charging contacts have established a connection with charging dock pins, you can remove the robot manually if you need to connectThe charging dock is unplugged When DEEBOT is powered Turn on, which causes the battery drainPlugin the charging dock and make sure DEEBOT is powered on. Keep DEEBOT on the Charging Dock to confirm it has a full charge to clean at any time as needed2DEEBOT gets into difficulty while working and stops May DEEBOT is led with something on the floor (hair, electrical cables, drooping curtains, carpet fringe, etc.)DEEBOT will try in different ways to untangled itself. If it is failed, manually remove the blockage and restartSide Brush get stuck or the rotation speed of the Side Brush reducesIf the Side Brush still rotates slowly. Remove the dirt and debris tangled around the Side BrushMain Brush get stuck or the rotation speed of the Main Brush reducesIf the Main Brush still rotates slowly, Remove the dirt and debris tangled around the Main Brush with the given Multi-Function Cleaning Tool3DEEBOT come back to the Charging Dock before it finishes scheduled cleaning workWhen battery power gets down, DEEBOT automatically Return to Charging Mode and returns to the Charging Dock to recharge itselfThis is natural. There is no reason to be scaredWorking time differs according to floor surface type, room arrangement complexity, and the selected Cleaning ModeThis is natural. There is no reason to be scared4DEEBOT does not clean automatically at the Predefined scheduled timeThe time Scheduling process is canceledSet Time Scheduling function as described in section 3DEEBOT is switched OFFSwitched ON DEEBOTThe robot's battery gets lowKeep DEEBOT Switched ON and on the Charging Dock to make sure it has a full battery charge to work at any time as neededThe robot's stuff are tangled with dirt and debrisSwitch OFF DEEBOT, clean the Dust Bin, and turn down the robot Clean. Side Brushes and the Main Brush as described in portion 45Remote Control timeout (efficient control range of Remote Control is 5m (16′)The batteries in the Remote Control needs to be changedReplace with brand new batteries to confirm they are placed correctlyDEEBOT is switched OFF or DEEBOT's battery gets lowMake sure DEEBOT is switched ON and 100% chargedThe infrared signal cannot be sent because of the Infrared Emitter on the Remote Control or DEEBOT's Infrared Receiver on DEEBOT is grimyUse a clean and dry cloth or provided Multi-Function Cleaning Tool to wipe the Infrared Emitter on Remote Control and the Infrared Receiver on DEEBOTThere is another material interfering with the infrared signal to DEEBOTAvoid using the Remote Control close other materials using infrared signalsDeebot N79 bumper exception Sometimes, the front bumper of your DEEBOT may get stuck in, which mostly happens in the Roomba vacuum. This occurs when the sensors of the bumper are grimy which known as Roomba Error 9. When that happens, your robot will only go abaft as it thinks the obstacle is closing in on it! Just mildly take out of the front bumper a quarter-inch – and voila, your DEEBOT should be back to usual.Final SentencesThe amount of time Deboot N79 will save is ridiculous. We literally have to vacuum every day to keep the house feeling and looking clean and fresh with Ecovacs Deebot N79S, Because, we have a dog and a cat, and kids. Just Schedule it and forget about cleaning.Maybe once in two months, we use the normal vacuum cleaning to touch things up. I can save thousands of hours of work over a year. When you start using it the first time you will need to Deebot N79 Troubleshooting and empty the dustbin after each time cleaning. As your house gets cleaner you'll be able to go without emptying it for a weak. Without a few problems in all, I'm happy with my Deboot N79. Who am I: I am a Home Improvement Specialist, Cleaning Expert, Product Reviewer. Why I write: To write a blog that broadens readers' horizons and offer new solutions they can apply to their home. Who I write for: My family, my friends, my neighbors, myself, and most importantly you. Where do I write? homeplix.com, a blog solely focused on giving away home improvements suggestions. Nobody really likes doing chores around the house. In fact, if most of us could automate every single task in the house, we absolutely would. Imagine, it would almost feel like holidaying at a 5-star hotel, except you get to live that experience every day. For now, though, we need to settle for only having some of our daily chores taken care of by our robot friends. One such device that helps us live out this fantasy is the bestselling Deebot N79. This little machine is the perfect house guest. It makes very little noise, is always totally self-sufficient, and not only cleans up after itself but cleans up after everyone else too! If only we could say the same for most house guests! We find the Deebot N79 a very capable machine. It doesn't struggle with different surfaces and textures, managing to glide over hardwood floors and carpeted living rooms with similar levels of ease. In addition to this versatility, the Deebot also has a whole range of cleaning modes programmed in to suit every sort of household and every type of mess. But, these types of devices wouldn't be all that impressive if they didn't integrate well with your smart home setup. After all, without that, it would just be a regular vacuum with a few extra bells and whistles. But, in this case, the Deebot is the full package. This intelligent device comes with an added Ecovacs Home App, an easy-to-use remote, and even a smart home system. This ensures that your part in the cleaning of your floors is minimized and that you rarely even have to think about pitching in and helping out. However, you wouldn't be here reading this guide if everything worked as it should do 100% of the time. This proves that even the smartest of devices still rely on us somewhat to keep running. Having trawled the internet to see what Deebot users are having issues with, one topic seems to keep rearing its head – it would seem that quite a few of you are having issues trying to reset your robot friend. Not to worry. We will show you how it's done in a few easy steps below. What Features Does it Have? This little robot is surprisingly feature-laden for its small and compact structure and its price point. Deebot users can avail of features such as Smart Motion, Auto, Edge, and Spot modes, automatic charging capability. As if that wasn't impressive enough, you can also schedule cleanings so that you can stay out of each other's way. But, for us, one of the most important factors which set it apart from its competitors is the long battery life. It is often the simple things that make the most difference, after all. This little dinky device can run for a whopping 110 minutes without needing a break to charge itself again. If we were to pick one negative, it would be the bin size. To us, its 520ml capacity seems a little too small, particularly if your Deebot has to deal with cleaning up animal hair. Overall though, we have to say we're quite fond of this little bot. How To Reset Deebot N79 Okay, so it is time to get to the root of the problem that you and many others are having. Luckily, the solution is really simple once you know how it is done. To reset Deebot N79: Press and hold down the start/pause button for a solid 3-minute interval. After that, you will need to input the correct time again so that your Deebot can get up and running as normal again. Whatever you do, don't forget that last part. It is pretty vital as things go. Once you have done all of this and got the scheduling sorted out: Make sure that you have heard your Deebot N79 make three little beeps. The indicator light should also turn blue at this point. If it hasn't, you will need to try and reset it again. The same goes for if the light turns green instead of blue, please reset your Deebot N79. Effectively, what this means is that the scheduling has been canceled. If this keeps occurring, you will, unfortunately, need to replace the motherboard. AUTO Mode ButtonIndicator Flashing BlueDeebot is charging Solid BlueDeebot is cleaning Flashing Red or Solid RedDeebot has a problem Solid RedDeebot battery low I'm Getting a Red Light. What Does That Mean? There is just something about a red light that inspires panic in us. After all, when the dashboard in our cars lights up red, it is never a good thing. In fact, generally, it means that there are going to be some pretty expensive repairs due in the near future. When it comes to the Deebot, there were a lot of rumors and speculation that the red light meant that it might have been something to do with a battery problem. However, having looked into it, this doesn't seem to be the case at all. So, the news isn't as bad as you may have been lead to expect. In fact, the red light problem is generally a warning that there is too much dust and gunk in the beater brush. How Do I Fix the Red Light Problem? Fixing the red light issue isn't necessarily something you need to call in a specialist for, though it does require you to take out the toolbox. However, the problem is so easily fixed that anyone can do it. Simply remove four tiny Phipps head screws and get a flathead screwdriver to remove the front wheels. After you have taken them off, clean the beater brush. After you have put it back together again, your Deebot N79 should be working as if it was brand new again. Different Numbers of Beeps and What They Mean Alarm SoundsMeaningUser Action 1 BeepDeebot is either stuck or suspended.Place Deebot on a flat surface, clear the obstacles, then restart Deebot. 2 BeepsMalfunction with Anti-Collision BumperEnsure Anti-Collision bumper is clear of debris. 3 BeepsMalfunction with Anti-Drop sensorsEnsure Anti-Drop sensors are clean. 4 BeepsLow BatteryPlace Deebot back to Charging Dock manually for charging. The Last Word: How To Reset Deebot N79 That's all we have for fixing all of the most common issues that pop up with the Deebot N79. That being said, if you are reading this and feel that we have missed out on something that you would have liked us to have covered, please let us know in the comments section below.
