Notes:

- When measuring output ripple, it is recommended that an external 0.47 μ F ceramic capacitor be placed from the +Vout pin to the -Vout pin.
- Transient recovery is measured to within a 1% error band for a load step change of 50 to 100%.
- Operation at no-load will not damage these units. However, they may not meet all specifications. To maintain specified operation, the minimum output loading given in the table above must be maintained.
- It is recommended that a fuse be used on the input of a power supply for protection. See the table above for the correct rating.
