SMCG/J6036 thru SMCG/J6072A

FEATURES:

- BIDIRECTIONAL
- 1500 WATTS PEAK POWER
- VOLTAGE RANGE FROM 5.5V TO 185V
- LOW INDUCTANCE
- LOW PROFILE PACKAGE FOR SURFACE MOUNTING

DESCRIPTION:

These Transient Voltage Suppressor devices are a series of Bi-directional Silicon Transient Suppressors used in AC applications where large voltage transients can permanently damage voltage-sensitive components.

These devices are manufactured using two silicon PN, junctions in a back to back configuration. They are characterized by their high surge capability, fast response time, and low impedance, (Ron) for clamping surge.

The SMC series, rated for 1500 watts during a one millisecond pulse, can be used to protect sensitive circuits against transients induced by lighting and inductive load switching. The response time of TAZ clamping action is less than (5x10 ⁻⁹) sec; therefore, they can protect Integrated Circuits, MOS devices, Hybrids, and other voltage-sensitive semiconductors and components. This series of devices has also been proven very effective as EMP and ESD suppressors.

MAXIMUM RATINGS:

1500 watts of peak pulse power dissipation at 25°C $t_{clamping}$ (0 volts to $V_{(BR)}$ min): less than 5 x 10⁻⁹ seconds Operating and Storage Temperature: -65° to +150°C

Steady state power dissipation: 5.0 watts at $T_1 = 25^{\circ}$ C, at mounting plane.

Repetition rate (duty cycle): .01%

Figure 1
Peak Pulse Power vs Pulse Time

5.5 thru 185 Volts 1500 Watts Transient Voltage Suppressors

Mechanical Characteristics

CASE: Molded, Surface Mountable.

TERMINALS: Gull-wing or C-Bend (modified J-bend) leads, tin lead plated

POLARITY: No markings on bi-directional devices.

PACKAGING: 16mm tape (See EIA

Std. RS-481.)

THERMAL RESISTANCE: 20°C/W (typical) junction to lead (tab) at mounting plane.

Microsemi Corp.'s SMC Series (1500W) surface mountable packages are designed specifically for transient voltage suppression. The wide leads assure a large surface contact and low resistance path for surge current flow to ground. These high-speed transient voltage suppressors can be used to effectively protect sensitive components such as integrated circuits and MOS devices.

Note 1: A TAZ is normally selected according to the rated "Stand Off Voltage" VRM which should be equal to or greater than the DC or continuous peak operating voltage level.
