### Notes

For inductive loading, without external suppression of the transistor outputs, the following applies:  
 $T_{0.95}$  = time in ms, until 95 % of the steady-state current is achieved.  $T_{0.95} \approx 3 \times T_{0.65} = 3 \times L/R$ .

Data transfer rate in the NET network: bus lengths of 40 m and over only attainable with cables with additional cross-section and connection adapter.
