Get the most from your battery

- › You can recharge your battery several hundred times before it will need replacing and you don't need to fully discharge it before recharging.
- › Don't expose the battery charger to direct sunlight or use in areas of high humidity such as a bathroom. Battery life will decrease if you expose it to temperatures below -10°C or above 45°C.
- › If you charge your battery regularly and you notice a decrease in talk time or an increase in charging time, then it's probably time to buy a new battery.
